# GENIUS 700/900 2013

SCOTT SUMMER 2013  
TECH WORKSHOP

In MY 2013 Scott presents the new Genius as a Marathon and Trail bike.

It is available in 27.5" (also known as 650B) and in 29".

The new Genius is the result of 2 years of research and development for one of the lightest trail/marathon bike frame set available on the market, hitting the scale with a HMX Fiber frame at below 2300 grams (5 lbs) including the frame, Scott Nude 2 /DT M3 shock and the unique TWINLOC XL remote control.

Frames with HMF Fiber are approx. 2500grams, and alloy frames are at approx. 2750 grams including the frame, Scott Nude 2 /DT M3 shock and the unique TWINLOC XL remote control.

Scott's focus was not only on lightweight but also on a durable and stiff frame with an innovative suspension technology in combination with an optimized kinematics of the rear swingarm.

The combination of an optimized kinematics with an extraordinary suspension technology closes the gap between superlight dual suspension race bikes (e.g. Scott Spark) and the new generation of all-mountain bikes (e.g. Scott Genius LT).

Genius was designed for riders looking for a dual suspended trail and marathon bike offering a maximum rear wheel travel of 150mm (27.5")/130mm (29").

Scott does not see frame and rear shock as single components which are assembled together on a bike, but as a concept with all these components working together and offering an outrageous function by matching perfectly.

The Genius Concept is based on a multi-pivot technology.

# GENIUS 700/900 2013

The damping performance was improved in comparison to the already famous "old" Genius, and with reworking also the kinematics we were able to reach a better progression in the end of the stroke/travel of the swingarm.

The Scott system, using the Nude 2 shock, named TC (Traction Control) will allow you to reduce by remote control the rear wheel travel from 150 (27.5")/130 (29")mm to 100 (27.5")/90(29")mm including a more progressive spring rate but still offering a supple break away.

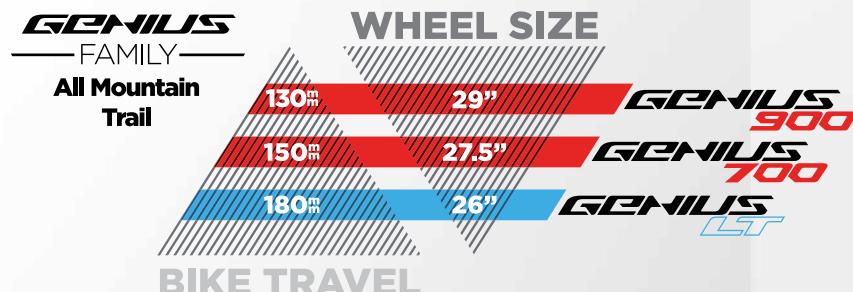

Some models of Genius use also the DT M3 shock which offers instead of the Traction Mode a Platform (Ride Mode) in between Lock-out Mode and Descent Mode.

No power will be lost and an optimum power transfer is guaranteed as the swingarm, in contrary to locked or automatic-locking systems, can follow the trail surface and will offer perfect traction and higher speed while standing on the pedals

## WHY 27.5"

When we decided it was time to re-design the Genius, we intended to improve the Trail segment. We also improved upon the investment made during the Spark development. The result is a much lighter and better tracking bike. When it came to observing historic design parameters we took convention and threw it out the window. Only a unique approach would serve this project, while abstaining from hanging onto antiquated standards.

The new 29'r movement has gained international acceptance, but has limitations, namely in regards to length of available travel. SCOTT Engineers found that 130mm was the optimum length of travel for the 29" wheel size without compromising frame geometry. The incumbent Genius was already offered in 150mm of travel, so it became clear early on in this project that the Genius was going to need to have 2 options in order to be relevant not only in the marketplace but also in our Mountain Line of bikes. We honored the 29" wheel standard and embraced the emerging 27.5" wheel size in order to produce a Fabulous Pair of Trail Bikes. Pick your Pleasure.

# GENIUS 700/900 2013

## A COMPARISON OF WHEEL SIZES

*Some helpful data when considering which wheel is right for you*

With three wheel sizes to choose from it's best to find the size that suits your needs rather than getting hung up on a diameter. Once you've chosen type of bike you want, look at the geometry to be sure the fit works for you while the travel suits your riding style. Bigger can be better, but only until the travel reaches a certain measure. See the research below.

Improved roll-over effect is the most prolific attribute when it comes to 29" wheels. The big wheels are great for rolling over nasty roots and rocky sections, essentially making it easier to ride these conditions. Improved traction is also a key factor with the increased wheel diameter compared to 26" wheels as tire contact to the ground is larger.

When discussing the pros and cons of the big wheeled bikes, shorter riders find themselves in an ambivalent situation. They want to benefit from the 29" wheels, but suffer from the negative effects when fit is considered. Additionally, the increase in rotational weight challenges many lower watt-producing riders, so the performance gains are negated when the rider cannot accelerate the wheel system as quickly.

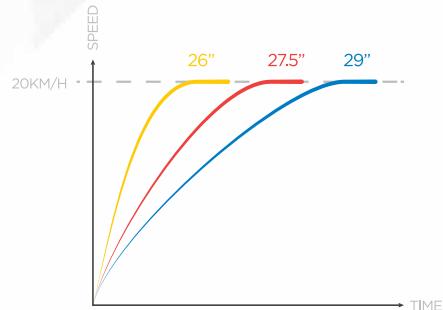

### SOTT RESEARCH: COMPARISONS OF THREE WHEEL SIZES

■ 26" WHEEL / ■ 27.5" WHEEL / ■ 29" WHEEL

SCOTT SUMMER 2013  
TECH WORKSHOP

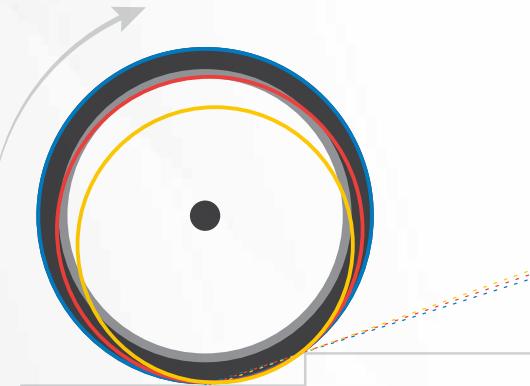

#### 1. ACCELERATION

Diameter and rotating mass directly influence the acceleration of a wheel. The 29" wheel has both the largest diameter and the most rotating mass, and therefore takes the most energy and time to accelerate. The 26" wheel accelerates fastest, and the 27.5" wheel falls in between.

#### 2. ANGLE OF ATTACK

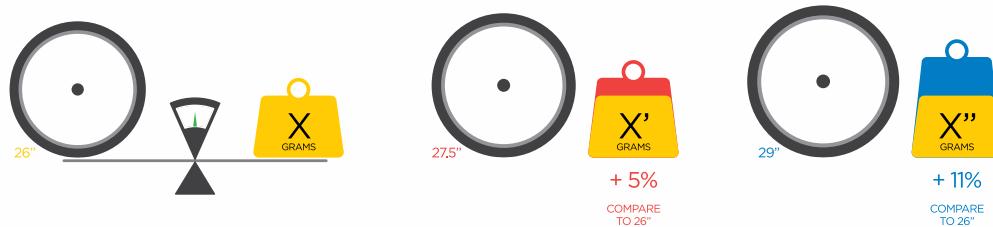

Increased wheel size decreases the angle of attack. That means bigger wheels make obstacles seem smaller.

# GENIUS 700/900 2013

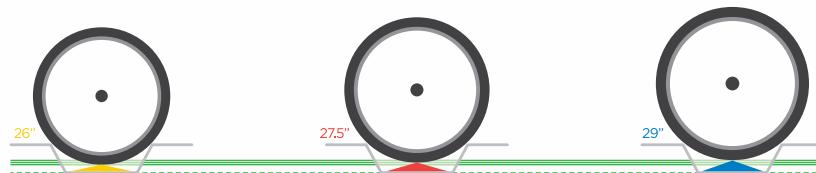

## 3. WEIGHT

The overall weight of the 27.5" wheel is only 5% (+ 140g) more than a 26" wheel, compared to 11% (+ 430g) more weight for the 29" wheel. Calculation is made on the same type of wheels set front and rear, tires and inner tubes. Based weight for 26" is 2450g

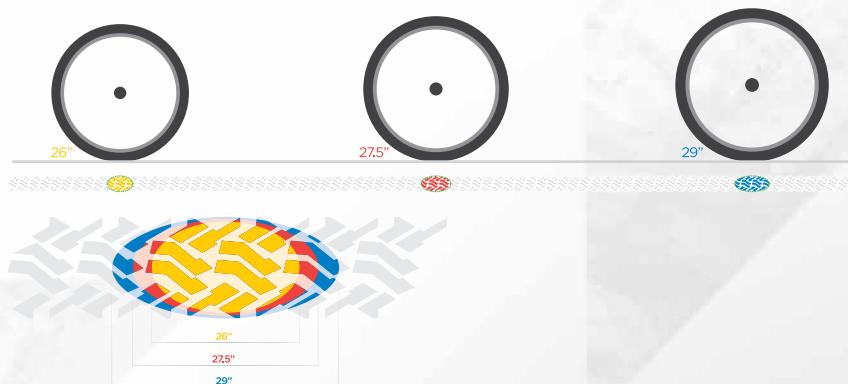

## 4. IMPROVED ROLL-OVER

A larger wheel rolls over objects with greater ease due its increased diameter. The wheel literally spans a greater distance without being impeded. So you stay rolling over rough stuff and maintain your speed through the corners.

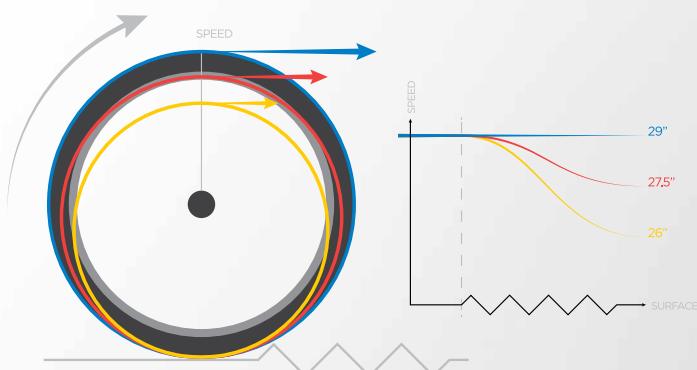

## 5. MORE TRACTION

The larger contact patch of a bigger wheel better connects the rider to the trail and provides improved traction over smaller wheels. This means more control and better braking.

## 6. MOMENTUM

Larger wheels carry momentum better than smaller wheels. This means you continue to roll through technical sections without being hung up on objects and slowed down.

# GENIUS 700/900 2013

## 7. TRAVEL RANGE

There are currently more and longer suspension travel options available for 26" and 27.5" wheels than for 29" wheels for which options are still limited to designs offering less than 130mm of travel in order to keep the cockpit height at the right geometry.

## SCOTT Research: Wheelsize Results Overview

	26"	27.5"	29"
PROS	<ul style="list-style-type: none"> <li>More Responsive</li> <li>Best Acceleration</li> <li>Works with longest travel</li> <li>Fits in small bike sizes</li> <li>Short chain stays</li> <li>Stronger wheel construction due to shorter spoke lengths</li> </ul>	<ul style="list-style-type: none"> <li>Increased Roll-Over</li> <li>Increased Momentum</li> <li>Increased Traction</li> <li>Less rotational weight than 29"</li> <li>More Agile than 29"</li> <li>More suspension travel options</li> <li>Short chain stays</li> <li>Balanced Stability and Performance</li> <li>Geometry closer 26"</li> <li>Great balance of Agility and Momentum</li> </ul>	<ul style="list-style-type: none"> <li>Best Roll-Over Performance</li> <li>Carries Momentum</li> <li>Maximum Traction surface</li> <li>Best stability on easy trails</li> <li>Lowest suspension stress</li> <li>Great for larger frame sizes</li> <li>Increase stability on long curve</li> </ul>
CONS	<ul style="list-style-type: none"> <li>Smallest Traction surface</li> <li>Limited Roll-Over</li> <li>Agility</li> <li>Lowest rotational weight and gyroscopic affect</li> <li>Highest stress on suspension</li> </ul>	<ul style="list-style-type: none"> <li>Small weight penalty</li> <li>Wheel/Tire availability at present</li> </ul>	<ul style="list-style-type: none"> <li>Maximum of 130mm travel</li> <li>high cockpit</li> <li>Geometry limits for small sizes due to handle bar height</li> <li>Wheels weights</li> <li>More inertia at low speed.</li> </ul>

### FACTS

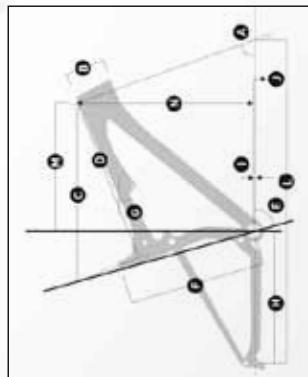

- 29" offers the best Roll Over and Traction benefits
- 27.5" wheels split the difference between 26" and 29"
- 27.5" wheels allow for more travel with bigger wheel benefits
- 27.5" wheels offer the best balance of acceleration, traction and Roll-Over
- The size of the wheel affects geometry and travel

**5%** **1st**  
The 27,5" wheel is only 5% heavier than the 26"

**150 | 27.5**  
**PERFECT COMBINATION**

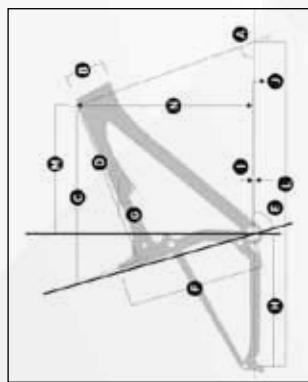

# GENIUS 700/900 2013

## OPTIMIZED GEOMETRY

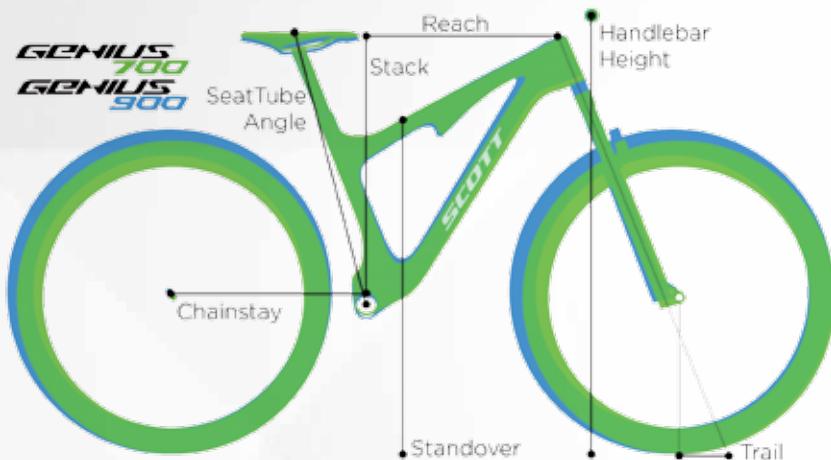

Two Different Bikes – Same Fit

Geometry is the key for a perfect bike. When it comes to building a new bike with bigger wheelsizes, engineers are challenged. The 29" movement has called for bigger wheels on bigger bikes, so the trail bike segment is the next battle field. Designing a proper geometry for the 150 mm segment, engineers face travel limitations when building frames with 29" wheels. That's why the SCOTT engineers developed the only proper solution building two bikes with two different wheelsizes, maximizing travel for both 27.5" (150 mm) and 29" (130 mm). One of the major achievements is in having built two bikes with the same geometry, thanks to their travel and wheel size balance. Having consistent geometry on both bikes, trail riders can choose their favorite bikes according to their personal desires and body height.

SCOTT SUMMER 2013  
TECH WORKSHOP

Geometry comparison: Genius 700 and 900

This graphic compares the geometries of the New Genius 700 and 900. It reveals that the geometries are almost identical in spite of their differing wheel sizes. Because the bottom bracket drops as wheel sizes increase, the BB axle migrates further below the wheel axles for a low slung feel. With the new Genius, riders will therefore enjoy a more 'in-the-bike' experience than ever before and reap the rewards of improved handling and stability. The Genius 700 and 900 are the only bikes in the Trailbike segment which offer adjustable geometry. By changing the shock mount chip, BB height increases 6 mm and steepens the head tube angle 0.4°, while handle bar position remains unchanged.

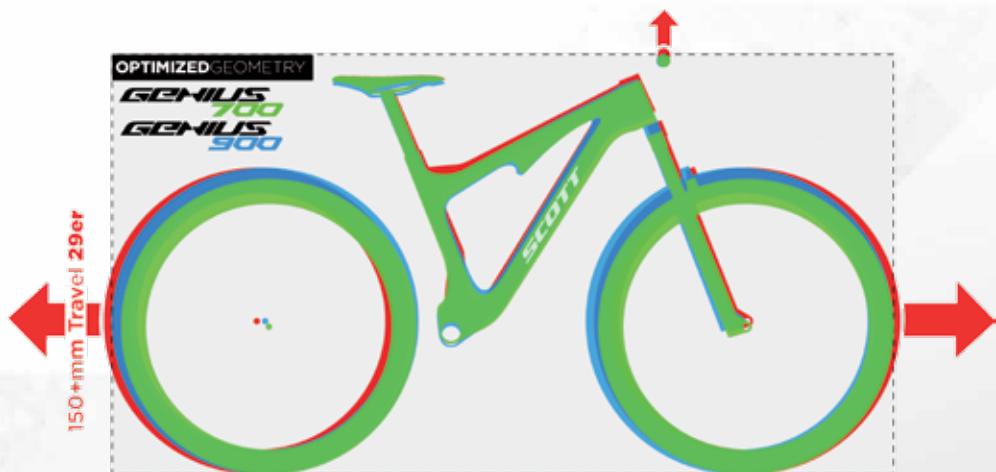

# GENIUS 700/900 2013

Geometry comparison: Genius 700 and 900 vs the old Genius

This graphic compares the geometries of the old Genius (black) to the New Genius 700 (green) and 900 (blue). The saddle height of the old Genius 26" is the highest in this graphic. By lowering the bottom bracket, both saddle height and standover were effectively lowered on both new versions. Further, because bottom bracket height is correlated to the amount of suspension travel, the Genius 900 with 130mm of travel actually has the lowest BB height. The reach increased 20 millimeters to better suit evolving cockpit preferences, and is also consistent with the Spark and Scale. By moving the shock from behind the seat tube to under the top tube, SCOTT's engineers have been able to reduce the seat tube offset to simplify fit when compared to the old 26" Genius, especially for riders running long seatposts.

Geometry comparison: Genius 700 and 900 vs a virtual 150mm/29" Genius

This graphic shows a 29" bike with 150 mm of travel (red) and the negative impacts of the additional travel. As travel increases, handlebar height, chainstay length, wheelbase and standover height all move outside our optimized geometry definition.

## FACTS

- Genius 700 and 900 offer consistent geometry thanks to their travel/wheelsize balance
- 29" wheels are acceptable with max. 130mm of travel
- 27.5" wheels allow for shorter chain stays which enhances handling
- Because BB height is defined by suspension travel, the
- Rider is closer to the ground on bigger wheels
- Standover height is reduced on both, Genius 700 and 900, compared to the old Genius

**130mm  
29"**  
GENIUS 900

**0.4° | 6mm**

Changing from low to high chip position increases BB height 6mm and steepens the HT angle 0.4°

# GENIUS 700/900 2013

## NUDE 2

The Nude 2 used on the new Genius is already known from the Spark of MY 12 but got a new eye-to-eye length on the Genius 700 with 200mm.

## TWINLOC XL LTD/LRD

**Twinloc**<sup>patented</sup>

# GENIUS 700/900 2013

## TC SHOCK TECHNOLOGY/TWINLOC XL LEVERS

The heart of the TC-System is the Scott Nude 2 Shock made by DT Swiss, offering three functions which make this system possible.

The TWINLOC XL remote control lever is the evolution of the already outstanding TRACLOC system of Scott.

While TRACLOC allowed only the change on the Scott TC rear shocks between the Scott patented Lock-out, traction and full-mode on the fly from the handlebar, the TWINLOC allows also the remote control of the front fork to shift between lock-out and open mode at the same time when you change the modes on the Scott rear shox. In combination with FOX 34 CTD (27.5")/ FOX 32 CTD (29") forks it is also possible to have a platform mode on the fork.

The 3 modes of LTD in combination with Nude 2 are:

- **Lock-out Mode** : lock-out rear, lock-out front
- **Traction Mode**: traction mode rear, platform mode front
- **Descent Mode**: full travel rear (Descent), full travel front

The 3 modes of LRD in combination with the DT M3 shock are:

- **Lock-out Mode** : lock-out rear, lock-out front
- **Ride Mode**: platform(Ride) mode rear, platform mode front
- **Descent Mode**: full travel rear (Descent), full travel front

Therefore Scott offers 2 different TWINLOC XL levers with following fork/rear shock combinations:

- Nude 2 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230097)
- DT M3 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230098)

Please note that the DT Swiss M3 rear shock does not offer a traction mode, but a platform mode. In contrary to Nude 2 the air-chamber volume of the positive chamber remains the same throughout the different modes

### Important:

You can only assemble the TWINLOC XL remote lever in "left side upward position" on the handlebar.

# GENIUS 700/900 2013

You have 3 positions of the TWINLOC XL remote lever.

## 1. LOCK OUT MODE:

the shock is locked; climbing on asphalt roads is now possible without any power loss. Simultaneous a blow-off-system prevents the shock being damaged in case the rider did not open the system while crossing obstacles.

## 2. TRACTION/RIDE MODE:

For Traction: by reducing the internal chamber volume inside the shock the travel of the shock will be reduced to around 60% (approx. 100/90mm) the characteristic of the air spring gets harder. This results in climbing without "bobbing" and offers still optimum traction of the rear wheel.

For Ride: by adding a platform on the compression damping system the shock will not bounce while standing on the pedals

## 3. DESCENT MODE:

full travel of 150/130mm (27.5"/29")

You will find the following positions on the remote lever:

For the assembly of the remote control of the front fork lock-out 2 different changeable cable rolls are existing.

The different roll for the pull of the fork remote cable can be changed within few minutes to adapt the lever to your fork model/brand.

You will see on the downside of the roll the indication of the fork brand or the fork model.

Scott offers 2 different TWINLOC XL levers with following fork/rear shock combinations:

- Nude 2 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230097)
- DT M3 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230098)

**Please kindly note that the cable roll of a RockShox DNA3 or FOX CTD fork-lever is not interchangeable with the regular rolls of 2 step forks. You need to use another lever!**

# GENIUS 700/900 2013

To change the rolls to match another fork brand pls follow the drawings below:

# GENIUS 700/900 2013

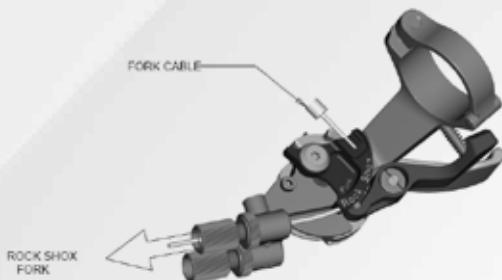

## ASSEMBLY OF THE REMOTE CABLE

### Important:

Please make sure the lockout of SRAM/RockShox or FOX fork is activated after transport correctly. Therefore please compress fork 5-10 times before following the manual on remote cable installation and adjustment.

The lever should show on the downside of the cable roll the brand name of the fork you are going to use. Please do not try to use a RockShox roll with a FOX fork or vice versa.

1. To assemble the cable please bring the lever into the Descent Mode, push the cable into the lever-eyelet as shown on drawing below, push it through the pre-cut cable housing and fix it at the assembly unit on top of the right side of the fork crown.

2. Fix the cable with the 2mm allen screw on the barrel adjuster on the fork crown with a tightening torque of 0.9Nm/8 lb/in, cut the cable and secure it with a cable end-cap. Please refer for this action also to the manual of SRAM/RockShox or FOX attached to the bike.

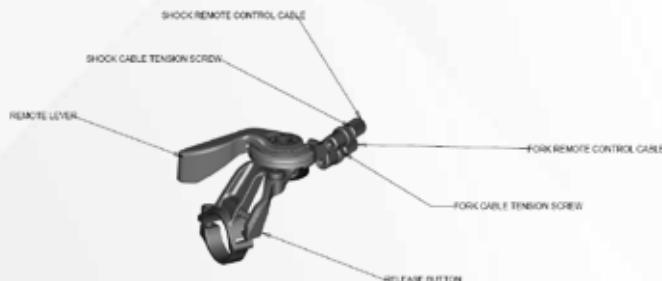

### TIP:

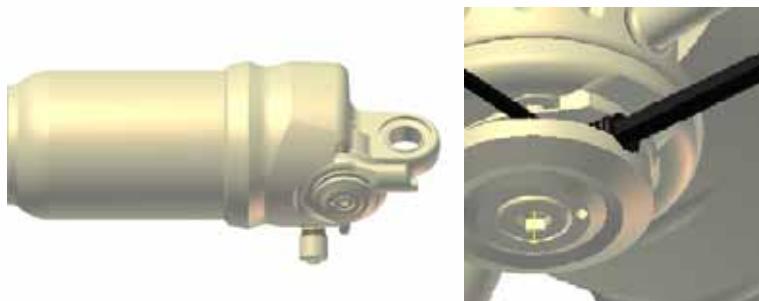

To check for accurate cable tension, please try to move the plastic end cap of the cable housing at the barrel adjuster on the remote lever. There should be "no play" between cap and barrel adjuster. In case of "play" please turn the barrel adjuster clockwise until "no-play".

## NUDE 2 SHOCK AND TWINLOC XL REMOTE CONTROL LEVER

In the drawing of the shock and remote lever, shown below, you will see the parts indicated with numbers which will be used in the manual for the adjustment and setup.

# GENIUS 700/900 2013

S1	Front eyelet/ Shock Bolt	L1	Remote Lever
S2	Rear eyelet/ Shock Bolt	L2	Release button
S3	Shock Housing	L3	Remote Control Cables
S4	Rebound-Adjuster Knob	L4	Cable Tension Screw Fork Remote
S5	Positive Chamber Valve	L5	Cable Tension Screw Shock Remote
S6	Remote Control Wheel		
S7	Cable Fixing Screw (hidden behind remote wheel)		
S8	Shock Piston		
S9	SAG Indicator (o-ring on piston)		

## BASIC SET-UP OF THE TWINLOC XL REMOTE CONTROL OF NUDE 2 SHOCK

To ensure perfect function of the Nude 2 TC shock it is very important to follow the steps shown below exactly.

On Genius Carbon frames you will find an internal cable routing.

Push the inner cable first through the remote lever in the upper cable routing of the lever and then through the cable housing as shown below inside the toptube.

On Genius alloy frames a regular outside cable routing, the outer cable housing is fixed on cable mount ports with cable zippers.

# GENIUS 700/900 2013

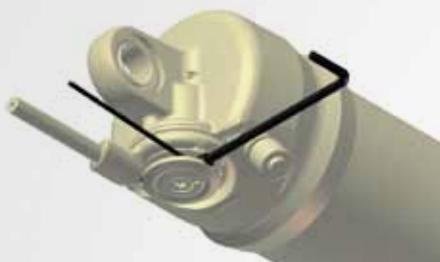

1. loosen the cable fixing screw (S7) by turning it counter clockwise with a 2mm allen key.

2. insert a new cable via lever hole and cable housing and push it into the shock as shown around the remote wheel (S6).

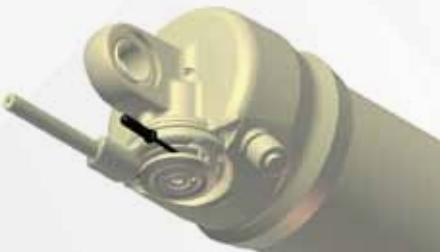

3. tighten the cable and fix the cablefixing screw (S7) by turning it clockwise with a 2mm allen key and a **max. tightening torque of 1.6Nm**.

4. cut the cable approx. 20mm away from the remote wheel.  
Fix it by squeezing it with pliers.

5. Fix it by squeezing it with pliers.

# GENIUS 700/900 2013

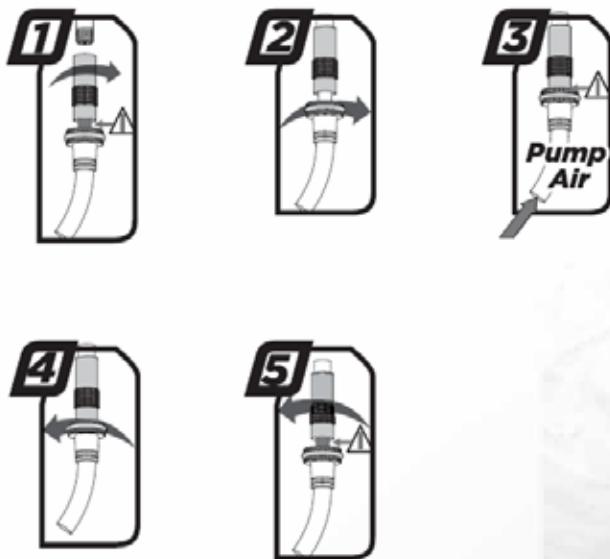

## BASIC SET-UP OF THE TWINLOCXL REMOTE CONTROL OF DT M3 SHOCK

The assembly of the remote cable and the setup of the M3 rear shock is very similar to the abovementioned assembly and setup of the Nude2

For more details on the DT M3 please follow the details shown in the manuals of DT Swiss attached to this bike.

### RECOMMENDED TOOLS FOR THE SHOCK SET-UP

For the set-up of the shock we recommend to use a shock pump with a scale up to 20 bars/300 psi with a special air valve connector preventing from air getting away while removing the pump from the shock valve, this will result in an exact air pressure.

Please note that air will flow into the hose and indicator when counter-checking the air pressure, so you have to set up again the recommended pressure after this action.

Make sure to balance at least this air loss when you make a check of the air pressure of the shock. Pls also note that the indicators of shock pumps have a tolerance of max. 10%.

# GENIUS 700/900 2013

## SET-UP GENIUS WITH NUDE 2 OR DT M3 SHOCK

The Set-Up of the Scott Nude 2 or DT M3 Shock can be easily done within a few minutes.

### Important:

For all adjustments of the air spring the remote lever has to be in position "all travel"

1. remove the valve cap of the valve (S5) located on the shock housing (S3).
2. mount the shock pump with its adaptor on the valve
3. pls take into account that it takes some air pressure from inside the shock to drive the indicator on the pump. Make sure to balance at least this air loss when you make a check of the air pressure of the shock. Pls also note that the indicators of shock pumps have a tolerance of max. 10%
4. pump the recommended pressure into the shock. On the shock you will find a decal showing the recommended air pressure of the positive chamber according to the rider's weight.
5. when you reached the needed pressure remove the pump and put the valve cap on the valve

## RECOMMENDED AIR PRESSURE

### Genius Pressure Charts - For Manual, Naked Rider Weight

kg/ bar	All Low Position	
	700	900
45	4.1	3.1
50	4.6	3.6
55	5.1	4.2
60	5.6	4.7
65	6.2	5.3
70	6.7	5.9
75	7.3	6.5
80	7.9	7.0
85	8.5	7.6
90	9.1	8.2
95	9.8	8.8
100	10.4	9.5
105	11.1	10.1
110	11.8	10.7

231	161	146
242	172	155

# GENIUS 700/900 2013

## SAG

The SAG should be 14mm (27.5/650B) respectively 12.5mm (29") on the shock piston.

To check the adjustment, please follow as shown below:

1. sit on the bike, put your feet on the pedal
2. put your feet back on the ground and stand over the bike without bouncing the bike during this action
3. check if the o-ring (S9) on the shock piston (S8) has a distance of 14/12.5mm to the main dust wiper/seal between shock housing and piston.

- if the distance between the o-ring and the main dust wiper/seal is 14/12.5mm, the air pressure is matching to your weight  
- if the distance between the o-ring and the main dust wiper/seal is less than 14/12.5mm, the air pressure of the air chamber is too high and should be carefully reduced by using the bleed knob of the shock pump until the distance is 14/12.5mm.  
- if the distance between the main dust wiper/seal is bigger than 14/12.5mm the air pressure of the air chamber is too low and should be increased by using the shock pump until the distance is 14/12.5mm.

## SET-UP OF REBOUND NUDE 2 OR DT M3 SHOCK

"Rebound" describes the speed the shock comes back to its original length after absorbing an obstacle.

By using the rebound adjuster knob (S4) you can adjust the rebound step by step.

Please refer to the following instruction:

Ride your bike off a pavement (remain in the saddle) and check how many times it bounces.

- if it bounces 1-2 times, the set up is good.
- If it bounces more than 3 times the rebound is too fast. Turn the knob 1-2 "clicks" clockwise
- If it does not bounce the rebound is too slow. Turn the knob 1-2 "clicks" counter clockwise.

In case you want even more detailed figures of air pressure or tuning hints, you can download a program under [www.scott-sports.com](http://www.scott-sports.com) in the support area of the website.

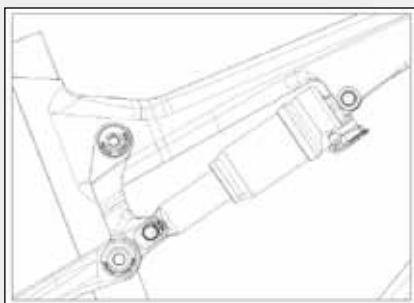

# GENIUS 700/900 2013

## Important:

Note that you have to mount the Scott Nude 2 Shock always as shown underneath.

Mounting the rear shock in a different position can cause severe damages to the frame, the linkage levers and the rear shock.

Same for the DT M3 on some of the Genius models.

## Important:

Note that you have to mount the Scott Nude 2 Shock always as shown underneath.

Mounting the rear shock in a different position can cause severe damages to the frame, the linkage levers and the rear shock.

Same for the DT M3 on some of the Genius models.

## SET-UP OF OTHER SHOCK MODELS

Scott strongly recommends using only the Scott Nude 2 (DT M3 shock) with the Genius bike, as we designed both parts for a perfect matching combination with a linear suspension rate.

Also on those shock models the SAG should be 14/12.5mm.

### Other Shock Models on Genius

If you want to use a different rear shock model than the one originally on the bike, please make sure that the shock will not hit the frame in any position and cause a damage to the frame.

Please follow the instruction below:

Please make sure that the rear shock or its accessory parts do not touch the frame when mounting or suspending.

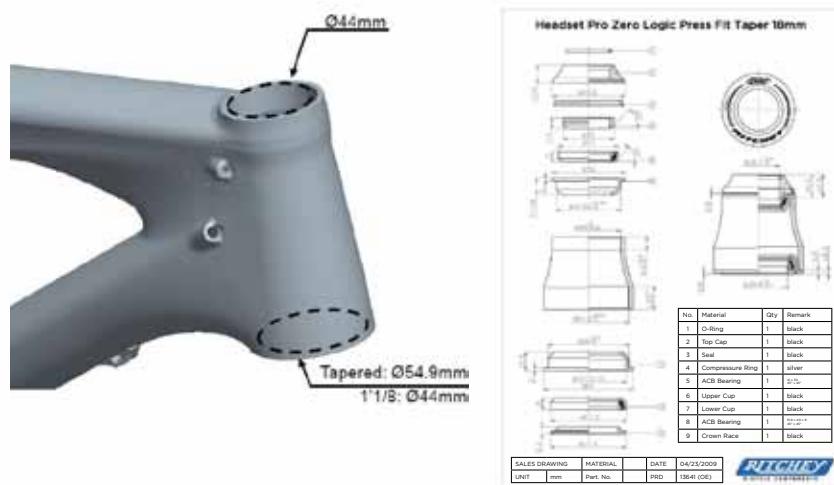

For doing so release the air/remove the coil, install the shock and compress the shock completely.

If the shock touches the frame while doing so, do not use this shock in order to avoid damage to frame, swingarm or shock.

# GENIUS 700/900 2013

## HEADSET OPTIONS

Genius features a tapered headset and fork steerer system to match with semiintegrated headsets of the "50-61"mm range with ID of Headtube of 44.0mm on top and 54.9mm on the lower end.

Ritchey WCS Carbon Zero Tapered / PF 50-61mm / 18mm UD	PRD 13636
Ritchey PRO Tapered / PF 50-61mm / 12.9mm	PRD 13640

It is also possible to use forks with a standard 1 1/8" steerer tube when using a reducer headset such as e.g.

Ritchey WCS Carbon Zero Tapered / PF 50-61mm / 18mm UD	PRD 14860
for 1 1/8" fork	

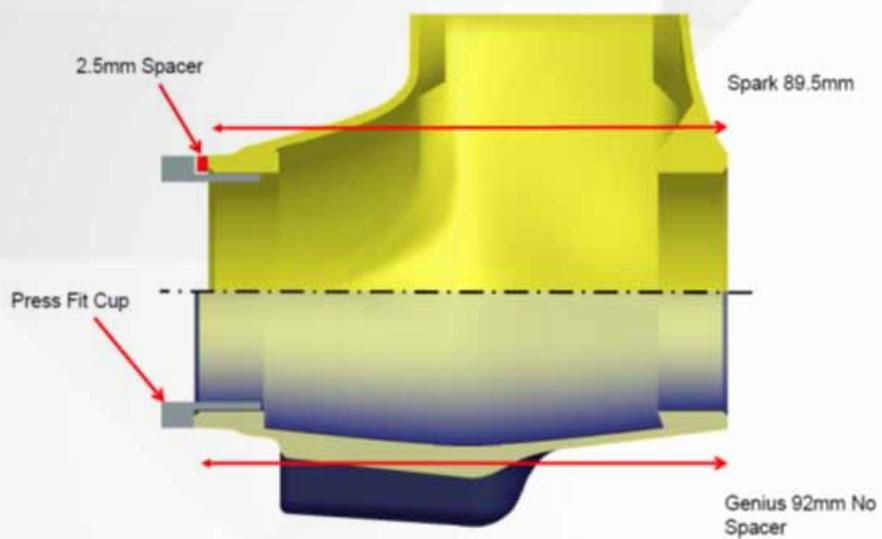

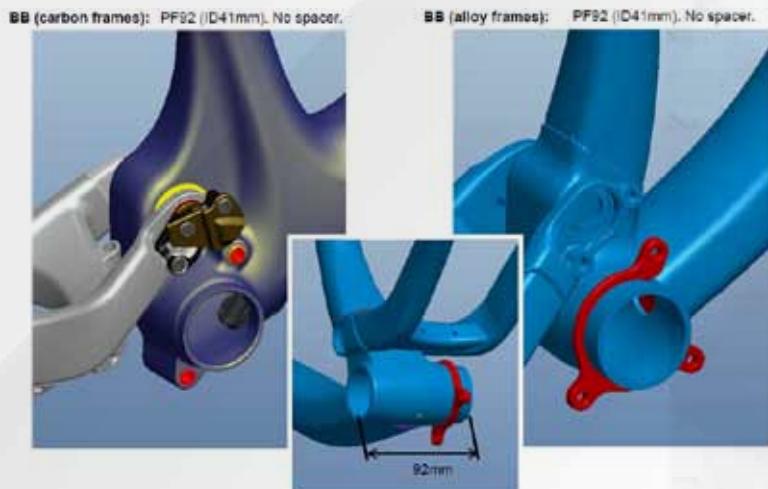

# GENIUS 700/900 2013

## BOTTOM BRACKET (BB) ON GENIUS

The frames of Genius (carbon and alloy) have a BB shell for BB92PF standard.

This matches to several bearing and crankset models of Shimano, SRAM, FSA and others.

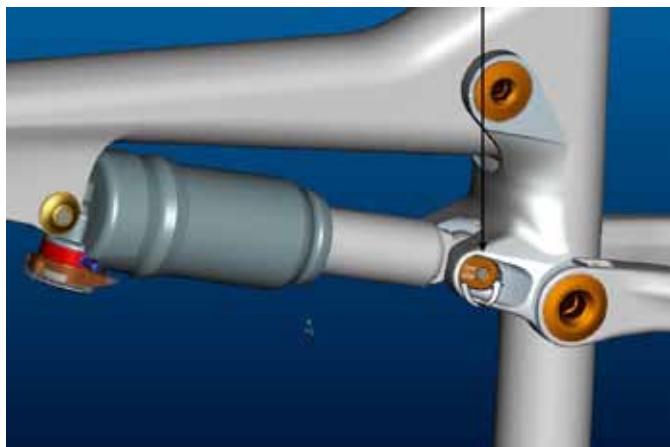

**Please note that you do not need anymore a spacer on the right side of the bearing cup between frame housing and bearing cup.**

# GENIUS 700/900 2013

## ADJUSTABLE BB HEIGHT

On Genius bikes equipped with the Nude 2 or the M3 shock you can adjust the BB height above ground in 2 positions by flipping a geometry chip located on the linkage bar shock mount.

1. low BB for lower center of gravity over ground
2. high BB for bigger clearance between pedals/crankset and obstacles on the ground

### Genius 700:

- head angle: 67.9° (low) – 68.4° (high)
- BB height: 345mm (low) – 351mm (high)

### Genius 900:

- head angle: 69° (low) – 69.5° (high)
- BB height: 335mm (low) – 340mm (high)

### Important:

It is not possible to use this geometry chip with other shock models than the Nude 2 or M3.

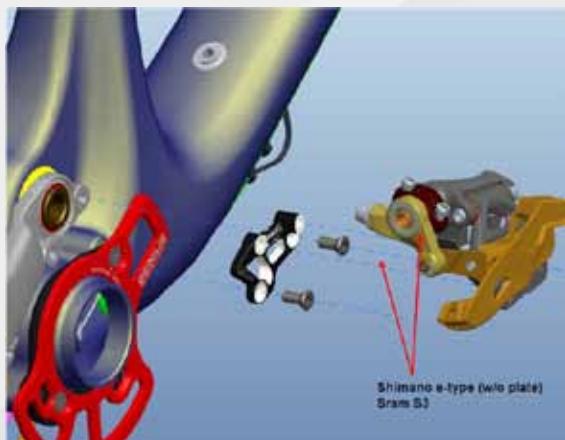

The shock might collide with parts of the frame or linkage bar.

# GENIUS 700/900 2013

## FRONT DERAILLEUR (FD) MOUNTING DETAILS

On all Genius frames you will find a Shimano E-type front derailleur but fixed directly on the swingarm without the plate that is fixed normally between the bottom bracket bearing cup and the bottom bracket housing of the front triangle or a SRAM Direct Mount Type S3 FD.

Please note that you always need to use the adapter plate attached to the bike or frame set between chainstay and front derailleur.

This adapter can be ordered at the Scott distribution with parts number:

229728	FD Mount Genius 2013 700-650B
229729	FD Mount Genius 2013 900-29

Please note that the 2 sizes of the adapters are not interchangeable!

Please also note that there are 2 options on the chainstay bridge for the cable stop of the FD for Shimano or SRAM FD. This will help to have a smooth cable routing with low actuation forces

# GENIUS 700/900 2013

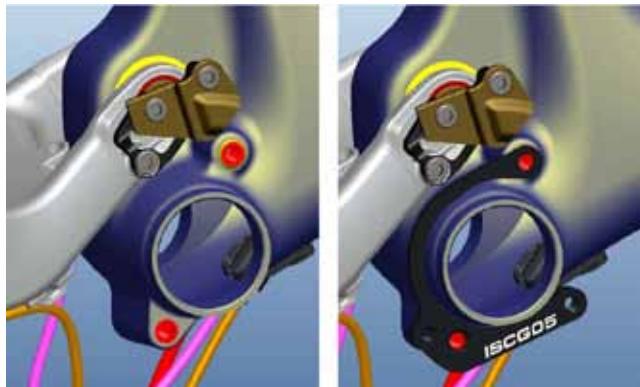

## CHAINGUIDE

The Carbon as well as the alloy frames of Genius can be fitted with ISCG chainguide systems.

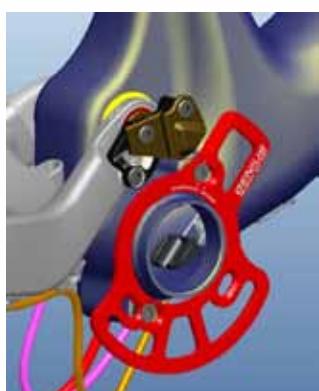

A set of all spare parts for this action can be ordered via the Scott distribution with:

229730	ISCG adaptor Genius 2013
--------	--------------------------

Details for the assembly on the carbon frames of Genius:

The adaptor must be used in order to assemble the chainblocker on the ISCG05 chainguide system.

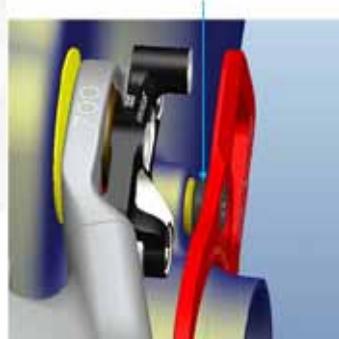

Please note that you need to assemble the chainblocker exactly the way as shown below and use all parts of the set.

Please also respect the different assembly positions for SRAM and Shimano front derailleurs

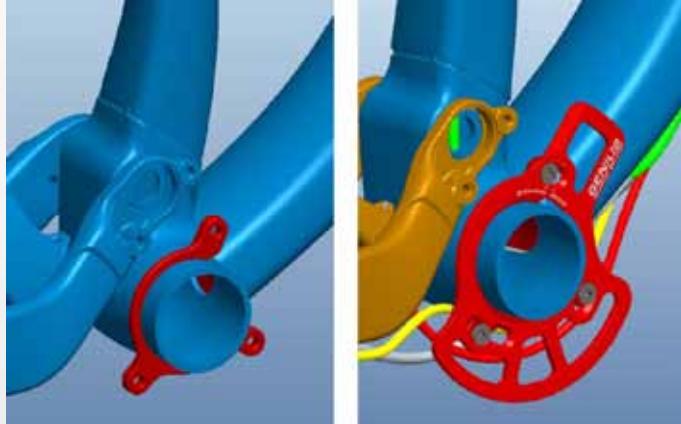

For 2x10 drivetrains you need to use 2x2.5mm washers, for 3x10 drive trains 1x2.5mm washers between adaptor/frame and the chainblocker as shown above.

Details for the assembly on the alloy frames of Genius:

You can assemble the chainblocker directly on the integrated ISCG05 mount on the BB shell.  
Please respect the different assembly positions for SRAM and Shimano front derailleurs.

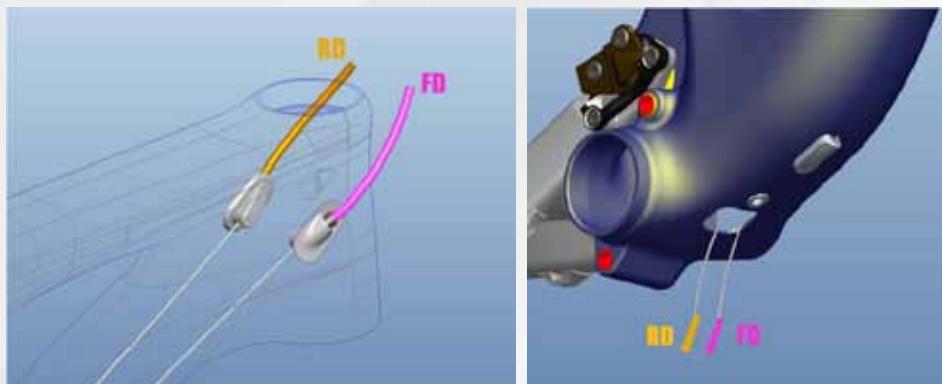

# GENIUS 700/900 2013

## GENIUS CABLE ROUTING

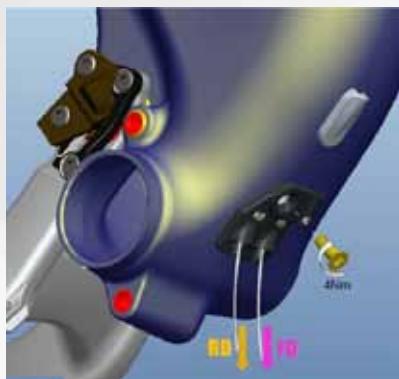

The direct and straight cable system on all our full suspension models offers perfect shifting performance combined with lightweight and high resistance against water and dirt.

### Carbon Front frames:

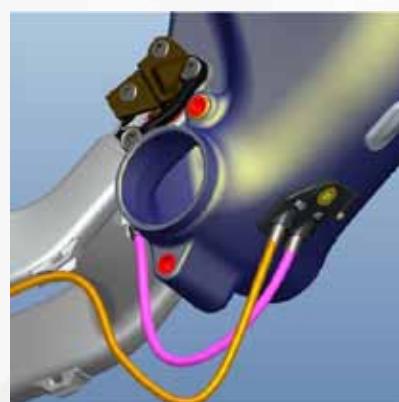

The carbon frames of Genius have an internal shifting cable routing with cable stops on the front end of the downtube as shown in the drawing below.

Please note that the inner cables need to cross each other 1 time on the inside of the downtube before you pull them out through the cable slot on the lower downside of the downtube.

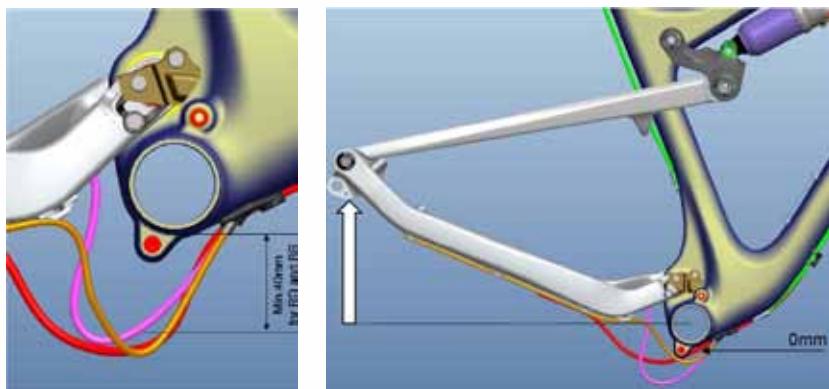

Push the cables through the cable guide as shown below and fix the cable guide on the downtube with a 3mm allen key and a tightening torque of max. 4Nm/35in/lbf.

Push the outer cable housings on the cables into the cable guide but make sure to respect the needed length as shown in the next drawing!

# GENIUS 700/900 2013

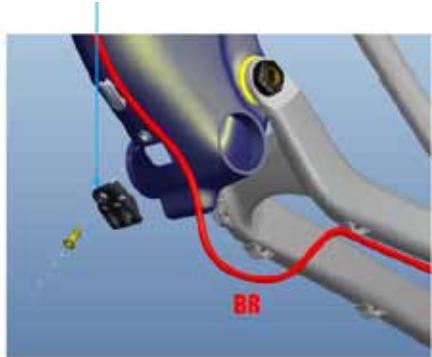

Please make sure to respect the 40mm distance between the cables and the BB (bottom bracket) housing to avoid "ghost-shifting" and/or damages on the shift cables and brake hose.

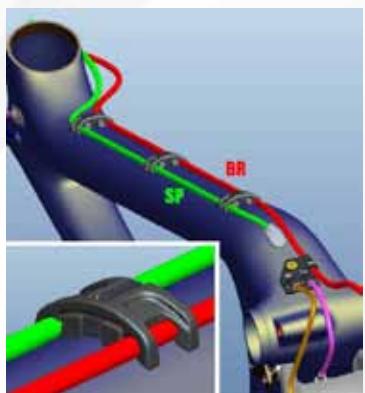

For the rear brake please assemble the cable as shown in the following drawings:

Please keep in mind to have a minimum distance of 40mm between the brake hose and the BB housing as abovementioned!

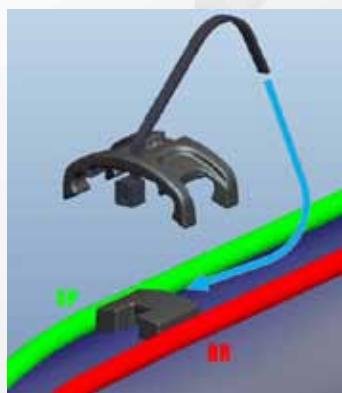

USE PLASTIC GUIDE TO FIX THE BRAKE CABLE

Please fix the brake hose and the remote seatpost cable housing (if applicable) on the frame on the cable mounts with the mount clips by following the routing info as shown below:

Please secure the clamps with a cable zipper as shown in the drawing below:

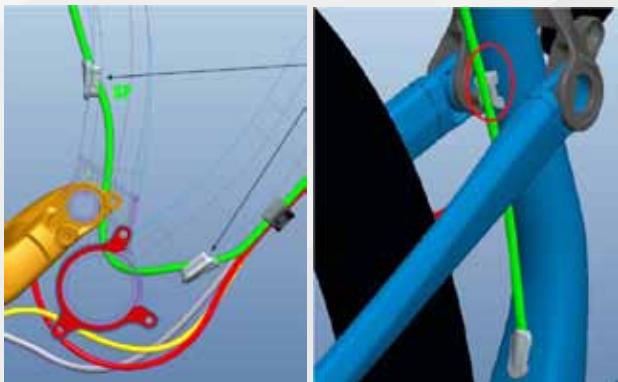

The cable guide can be ordered via the Scott distribution with parts number:

223305

Cable guide BB Spark '12 Genius '13 carb

# GENIUS 700/900 2013

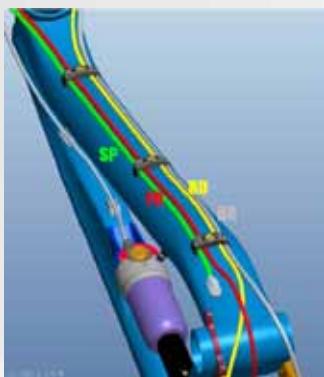

In addition to the derailleuer cables and the brake hose you also will see a possibility for an integrated cable routing of the seatpost remote on the carbon version of Genius.

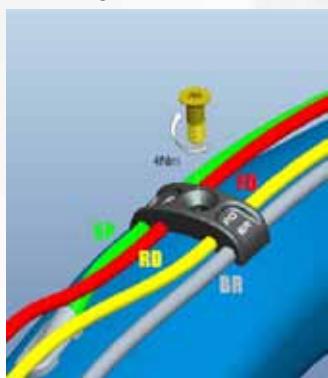

In order to seal the housing ports on the frame you should use the plugs attached to the bike.

## Alloy front frames:

Please fix the derailleuer cable housings, the brake hose and the remote seatpost cable housing (if applicable) on the frame on the cable mounts with the mount clips by following the routing info as shown below:

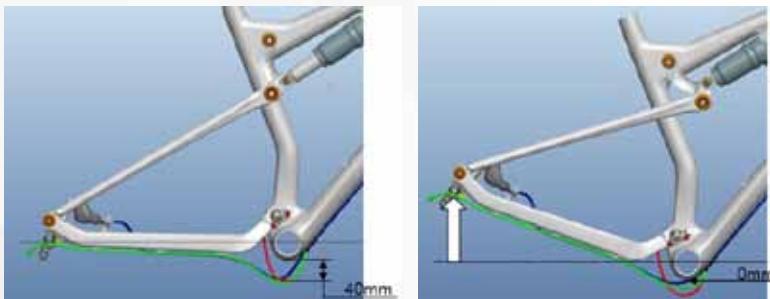

Please tighten the mount bolt with a max. of 4Nm.

229724 Cabel clamping set Genius alloy 2013 one size

Please make sure to respect the 40mm distance between the cables and the BB (bottom bracket) housing to avoid "ghost-shifting" and/or damages on the shift cables and brake hose.

For the rear brake please assemble the cable as shown in the following drawings:

## Important:

Please make sure to respect the 40mm distance between the brake hose and the BB (bottom bracket).

# GENIUS 700/900 2013

## GENIUS CABLE ROUTING

Some models of the new Genius are inline with a special seatpost model of the SRAM RockShox Reverb called Stealth.

The cable housing moves on the downside of the downtube inside the frame for a cleaner look and a better performance.

- Internal Routing for gear cables
- Internal and semi-internal routing options for seatpost

As the shops need to install and re-bleed the system after assembly of the seatpost it is important to follow exactly the details shown on the instruction movie at following link:

<http://www.youtube.com/watch?v=UMH3fbTL7Cw>

Framesets will have both versions of the plug to seal the downtube in case a non-integrated seatpost remote is used:

# GENIUS 700/900 2013

## REPLACEABLE DROPOUT

On Genius bikes of model year 2013 you can replace the rear derailleuer hanger. Depending on the different models you'll find following options:

### 1. 142mm axle with RWS 142/12

The complete set of RWS 142/12 is available via the Scott distribution with parts number 219574, the right side replaceable RD hanger with 219577.

### 2. 135mm axle with RWS 135/5

The complete set of RWS 135/5 is available via the Scott distribution with parts number 219572, right side replaceable RD hanger available with 219575

### 3. Regular 135mm rear axle with QR

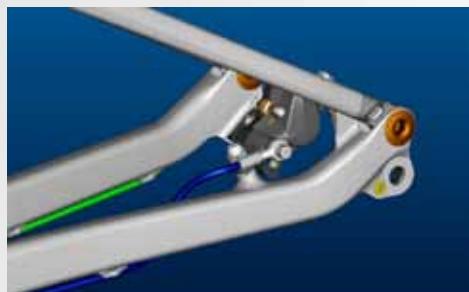

The replaceable hanger is available via the Scott distribution with parts number 206473.

In case you want to use another RWS standard Scott also can offer as after-market parts for specific wheelsets following parts via the Scott distribution: RWS 135/12 parts set: 219574, right side replaceable RD hanger available with 219576

## REAR DISC BRAKE MOUNT

Genius can be used with 3 different disc rotor sizes on the rear brake.

The rear disc brake on Genius is Postmount (PM) Standard on the left seatstay and it is possible to use disc rotors with 180, 185 and 200mm diameter.

Please note that for the assembly of 185 and 200mm rotors you might need adapters/washers between the PM port on the frame and the brake calliper.

For 185mm rotor diameter you will need 2 red anodized spacers that can be ordered via the Scott distribution with:

219568	Brake mount adaptor spacers 4mm f/185mm
--------	---

For the use of 200mm rotors please use for SRAM/Avid: "+20mm" adaptor Shimano: F18OPP2

## FRONT FORK SET-UP/CHANGE OF FRONT FORK

For the set up of the front fork please use the fork specific manual attached to the bike.

We recommend using front forks with a travel of 150mm (27.5") and 130mm (29"), as this will not influence the geometry and alter handling of the bike.

For details on the technical length of the recommended forks please refer to the Tech Info Chart before mentioned.

# **GENIUS 700/900 2013**

## **PIVOT MAINTENANCE**

The pivot and bearings on SCOTT Genius are extremely easy to maintain. An external treatment with a grease spray after every bike wash is all you have to do. We do not recommend heavy grease sprays since these will leave a film on the parts which is difficult to remove. We recommend the same for the chain also.

The swingarm service kit of Genius is using the same parts as the Spark, inventory will be easier to handle by this as 1 set fits 2 different bikes:

223301-223	Swingarm Repair Kit Spark 2012
------------	--------------------------------

or buy them with international parts number as shown below in a hardware store.

6 x 6802 (24mmx15mmx5mm)

All nuts and bolts, bushings etc. to re-build the swingarm- section are included in this set.

Beside this set Scott will also offer an “endurance kit” to replace the IGUS bushings in the seatstays with an industrial bearing kit.

This kit can be ordered at Scott:

223302-222	Igus Bushing Set Spark 2012 CST/SST

# 2 GENIUS 2013 TOOLSET

SCOTT SUMMER 2013  
 TECH WORKSHOP

# GENIUS 2013 TOOLSET

The good news for workshops on Genius is that the tool kit as well as the hardware kit is the same as on Spark MY 12.

Therefore you can use all items you already have on the shelves from Spark service.

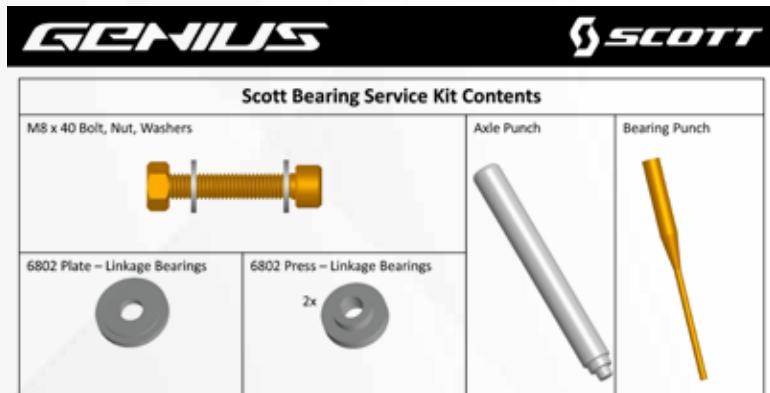

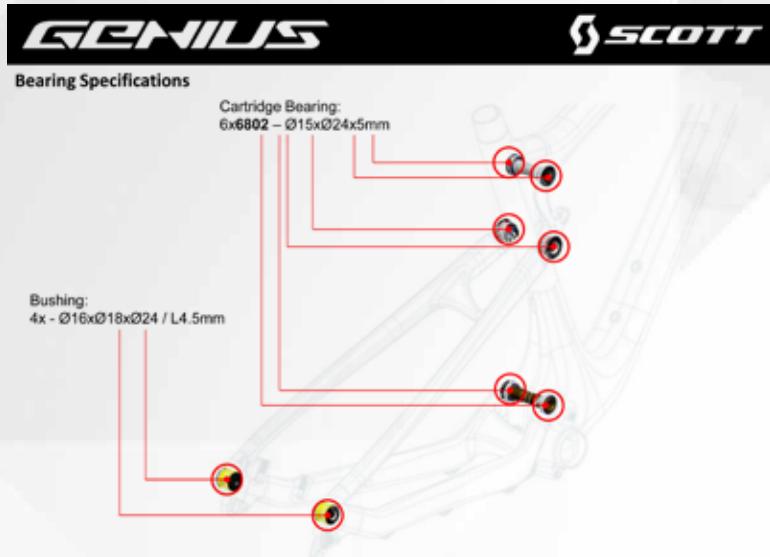

To repair or replace the bearings of the pivot points of Genius we offer following articles:

223289-222	Tool set Spark 2012
223301-223	Swingarm Repair Kit Spark 2012
223302-222	Igus Bushing Set Spark 2012 CST/SST
223303-222	Ind. Bearing Set Spark 2012 CST/SST

The tool set will contain, beside all tools in stainless steel quality, a CD showing all steps of the bearing disassembly and assembly as well as all needed technical data as e.g. tightening torques etc.

The Swingarm Rep Set will contain beside the bearings all nuts and bolts to replace all moving parts or parts of wear and tear of a Spark or Genius bike.

Please have a look at following pics giving you an overview about all needed steps and please make sure to use Loctite BLUE (still removable) on all screws:

# GENIUS 2013 TOOLSET

Required Tools		
Nylon Hammer		
A yellow and silver hammer with a wooden handle and a silver head.		
13mm Spanner	22mm Spanner	
A thin, silver adjustable spanner.	A thick, silver adjustable spanner.	
Torque Wrench	8mm Allen Key Socket	
A silver torque wrench with a black handle.	A grey Allen key socket with a hexagonal head.	
6mm Allen Key	8mm Allen Key	Loctite - Blue/ Medium
A short, dark Allen key.	A longer, dark Allen key.	A red and white tube of adhesive.

The bearings are standard size and can also be ordered in local hardware stores, in case customers do not want to replace all parts.

One frame needs following bearings:

**6 x 6802 (24mmx15mmx5mm)**

Beside this set Scott will also offer an "endurance kit" to replace the IGUS bushings in the seatstays with an industrial bearing kit.

This kit can be ordered at Scott:

223303-222	Ind. Bearing Set Spark 2012 CST/SST
------------	-------------------------------------

In case you want to buy the IGUS bushing kit separately you can order it with

223302-222	Igus Bushing Set Spark 2012 CST/SST
------------	-------------------------------------

# 3 TWINLOC XL

## TWINLOC XL

The Twinloc XL lever stays from function side same as the Twinloc lever used in 2012, but the push lever for the thumb was increased by 10mm length for a smoother pushing force and better ergonomics.

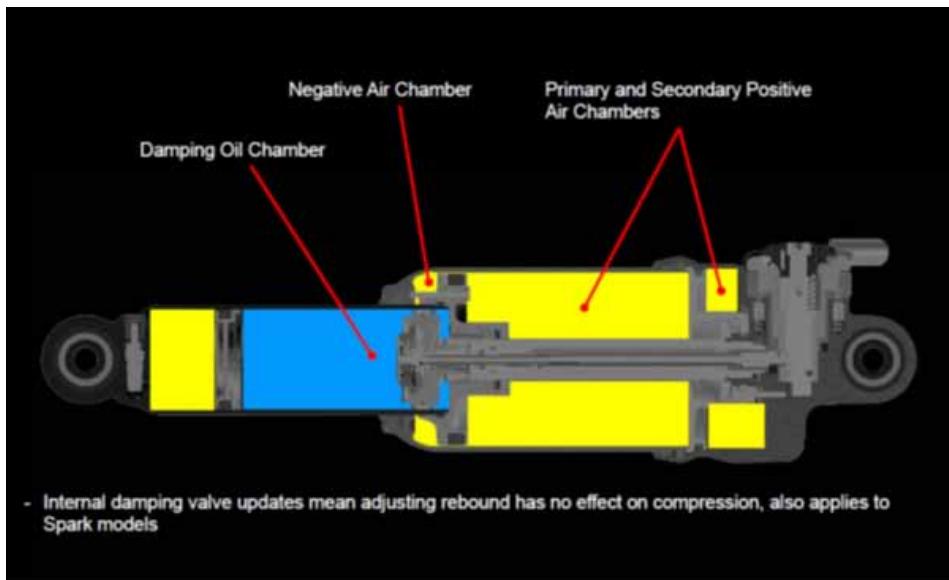

- Twinloc lever extended 1cm for even lighter touch
- Around 20% reduction in lever force
- Standard on Spark and Genius

Twinloc levers are interchangeable between MY 13 and older models.

The most important change on Twinloc levers is that they are now available for 2 different shock versions:

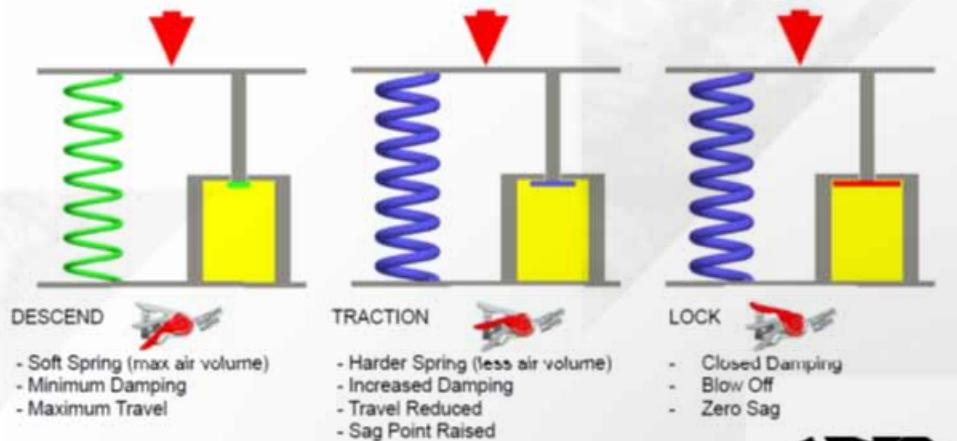

# TWINLOC XL

The 3 modes of LTD in combination with Nude 2 are:

- **Lock-Out Mode:** lock-out rear, lock-out front
- **Traction Mode:** traction mode rear, platform mode front
- **Descent Mode:** full travel rear, full travel front

A shock absorber is a system of spring and damper.

## TWINLOC XL

# TWINLOC XL

The 3 modes of LTD in combination with teh DT M3 shock are:

- **Lock-Out Mode:** lock-out rear, lock-out front
- **Ride Mode:** platform mode rear, platform mode front
- **Descent Mode:** full travel rear, full travel front

## Ride

On bikes with LRD, Ride has the same spring as Descend mode, only increased dampening.

Thereofre Scott offers 2 different Twinloc XL levers with th efollowing fork/rear shock combinations:

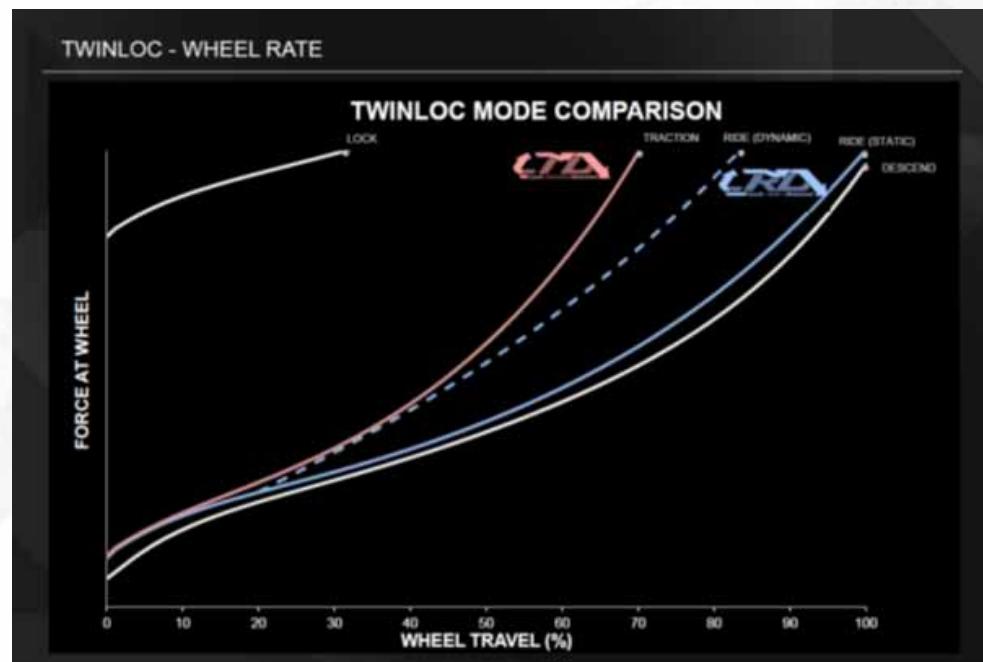

Nude 2 with different rolls for FOX CTD fork and RockShox DNA 3 fork  
(Scott Art. No. 230097)

DT M3 with different rolls for FOX CTD fork and RockShox DNA 3 fork  
(Scott Art. No. 230098)

Please note that DT Swiss M3 rear shock does not offer traction mode, but a platform mode. in contrary to Nude 2 the air chamber volume of the positive ir chamber remains teh same throughout teh different modes.

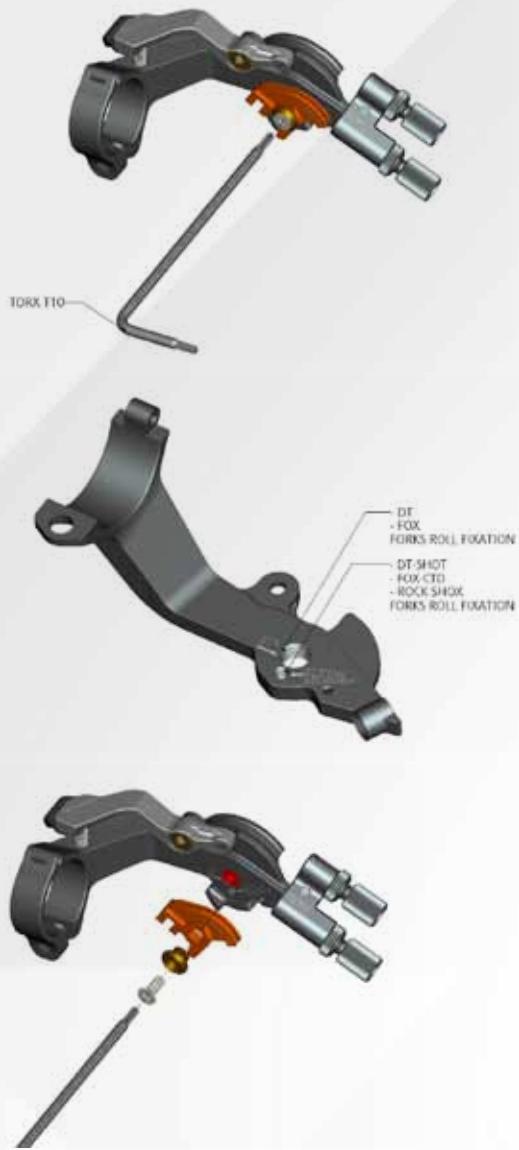

## Important:

You can only assemble the Twinloc XL remote lever in «left side upward» position on the handlebar.

## TWINLOC XL

To change the rolls to match another fork brand pls follow the drawings below:

# 4 GAMBLER 2013

SCOTT SUMMER 2013  
TECH WORKSHOP

# GAMBLER 2013

SCOTT SUMMER 2013  
TECH WORKSHOP

Gambler is the result of several years of research and development, also in close cooperation with the riders of Scott 11 DH Team, searching for one of the most versatile and durable DH bikes available on the market, but still easy in set-up and maintenance.

Scott's focus was not only on lightweight but also on a durable frame with an optimized kinematics of the rear swingarm.

Gambler was designed for riders looking for a race oriented DH bike offering rear wheel travel of 210mm.

Scott does not see frame, rear shock and kinematics as single components which are assembled together on a bike, but as a concept with all these components working together and offering an outrageous function by matching perfectly.

The Gambler Concept is based on a new designed multi-pivot technology.

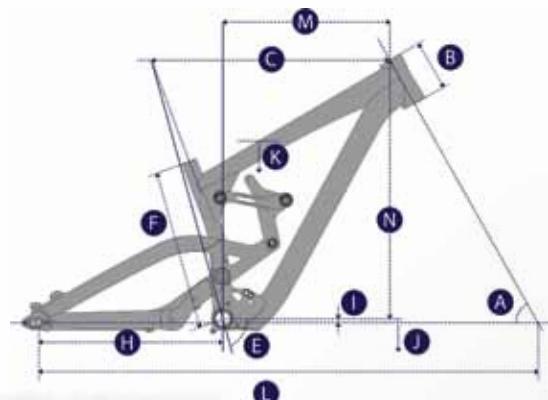

In combination with the linear coil-over shock characteristics the kinematics guarantees a progressive suspension, adapted to smooth riding (beginning of travel) as well as extreme jumps (end of travel).

The frame weight is 3.9kgs without shock.

# GAMBLER 2013

## GEOMETRIE/TECHNICAL DATA GAMBLER

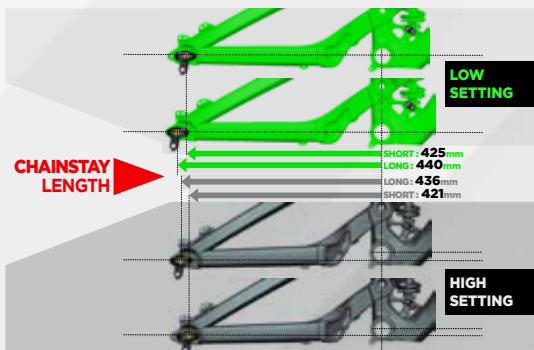

Travel	210mm/8.2"
Suspension Ratio	2.36
Piston stroke	89mm/3.5"
Shock lenght (Eye-Eye)	267mm/10.5"
Hardware Mainframe	22.2mm x 8mm
Hardware Linkage	60mm x 8mm
Seatpost diameter	31.6mm
Headset	1.5" straight, semi-integrated, OD 55mm
Fork travel	200mm
Fork lenght	571mm
BB housing	83mm/BB PF 104 (depending on model)

## GAMBLER 2013

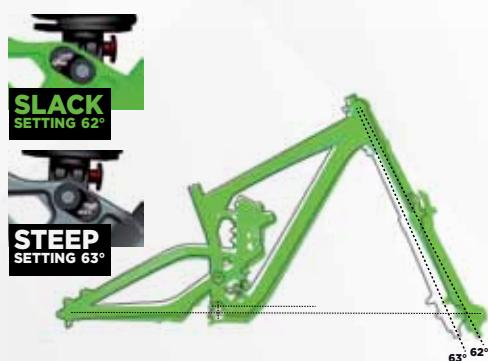

The chain stay length is adjustable from 421mm to 436mm in the high BB setting and from 425mm to 440mm in the low BB setting.

The Gambler is offered in three sizes with the seat tube staying at the same low height. The low seat tube and top tube help the bike to keep the weight lower to the ground.

The Gambler has two BB height options adjusted by the lower shock bolt. The lower hole provides a 0mm BB Drop, while the upper hole gives a +10mm BB Drop.

The Gambler has two head angle options adjusted by the lower shock bolt. The lower hole provides a 62° head angle while the upper hole gives a 63° head angle. The head tube is also very short allowing an extra degree of adjustment by raising or lowering the crowns of the fork. Three centimeters of additional fork height equals one degree of head angle adjustment.

# GAMBLER 2013

## HEADSET

All Gambler models are designed for a semi-integrated headset for 1.5" headtubes with an outer diameter of the headtube of 55mm.

For details pls refer to the following drawing which is just used for reference.

There are several parts manufacturers offering headsets for this dimension of the headtube.

# GAMBLER 2013

## ADJUSTABLE BB HEIGHT

On the Gambler you can adjust the BB height above ground for 10mm between its 2 positions by a geo-chip.

Low position is at a BB offset of +0mm, high position is at +10mm offset.

In order to change the set-up please un-tighten the shockmount bolt with a 6mm allen key.

"Flip-flop" the "geo-chip" on both sides as shown in the drawing below and tighten the shock mount bolt again with a maximum tightening torque of 35Nm/ 308in/lbs.

## BB STANDARDS

On Gambler you will find 2 different BB options, depending on the model you bought:

1. BB PF 104 with a housing width of 104mm and an inner diameter of 41mm for PressFit bearings

# GAMBLER 2013

## BB STANDARDS

2. Standard threaded BSA with 83mm housing width for threaded assembly bearing sets

## CHAINGUARD STANDARDS

The Gambler is prepared on all models for an ISCG05 chainguard system.

## RECOMMENDED TOOLS FOR THE SET-UP

Please read this manual and the manual of the rear shock manufacturer carefully before you start the set-up procedure.

In addition we strongly recommend using a tightening torque key with a 6mm allen key insert.

# GAMBLER 2013

## SET-UP GAMBLER

The Set-Up of the rear shock can be easily done within a few minutes.

Please take this time to avoid dangerous riding performance and to get the best out of your Gambler.

Please make sure that the coil spring on the shock matches to your riding weight (including your riding gear).

The basic set up of the shock spring is for size

S: 250 which corresponds to a rider weight of 50-60kgs

M: 300 which corresponds to a rider weight of 60-70kgs

L: 350 which corresponds to a rider weight of 70-80kgs

We recommend following coil springs:

50-60 kgs 300x3.50

60-70 kgs 350x3.50

70-80 kgs 400x3.50

80-90 kgs 450x3.50

For fine tuning the SAG and the corresponding eye-to-eye distance of the shock bolts you can tighten or release the pretension of the coil spring but please respect the maximum and minimum spring indications of the shock manufacturer.

The eye-to-eye distance between the shock bolts should be in basic set up 232mm (40% SAG/35mm SAG).

For further details on the shock set-up please follow the indications of the rear shock manufacturer attached to this bike.

## BASIC SET-UP OF REBOUND

"Rebound" describes the speed the shock comes back to its original length after absorbing an obstacle.

By using the red rebound screw you can adjust the rebound step by step.

Please refer to the following instruction:

Ride your bike off a pavement (remain in the saddle) and check how many times it bounces.

1. if it bounces 1-2 times, the set up is good.
2. If it bounces more than 3 times the rebound is too fast. Turn the screw 1-2 "clicks" clockwise
3. If it does not bounce the rebound is too slow. Turn the screw 1-2 "clicks" counter clockwise.

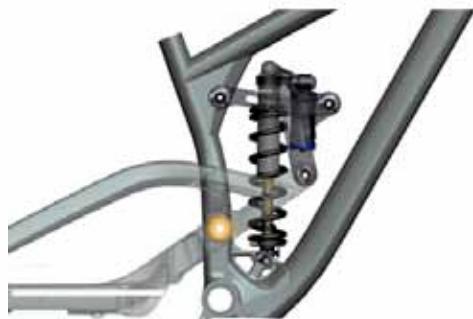

### Important:

**Note that you have to mount the rear shock always as shown underneath.**

**Mounting the rear shock in a different position can cause severe damages to the frame, the linkage levers and the rear shock.**

# GAMBLER 2013

## BASIC SET-UP OF REBOUND

### Important:

After a dismantlement of the rear shock, both fixing bolts should be tightened with a tightening torque of 35Nm/308in-lbs.

If this is not done correctly the rear shock can be damaged.

## SET-UP OF OTHER SHOCK MODELS

Scott strongly recommends using only the originally specified shock with the Gambler bike, as we have chosen carefully both parts for a perfect matching combination.

If you want to use a different rear shock model than the one originally on the bike, please make sure that the shock will not in any position hit the frame and cause a damage to the frame.

Please follow the instruction below:

Please make sure that the rear shock or its accessory parts do not touch the frame when mounting or suspending.

For doing so release the air/remove the coil, install the shock and compress the shock completely.

**If the shock touches the frame while doing so, do not use this shock in order to avoid damage to frame, swingarm or shock!**

## ADJUSTMENT OF SEATPOST-HEIGHT

### Important:

The seatpost has to be inserted into the seattube at a minimum of 80mm.

Never use another seatpost diameter than 31.6mm or try to use a shim/reducer between seatpost and frame.

# GAMBLER 2013

## ADJUSTABLE DROP OUT SYSTEM

The Gambler offers the possibility to change the drop out hanger in case of damage, but you can also choose between 2 different rear-axle positions which result in 2 different wheelbases:

### Important:

Please make sure to adjust the rear disc brake calliper position accordingly when changing the rear axle position!

The combination of a conical interface and eccentric axle ends add torsional rigidity and ease of use to the rear axle compared to a traditional pinch bolt design.

The rear axle of Gambler 2013 can be also ordered separately with parts number

230237	Axle 12mm 150mm Rear Gambler '13 black
--------	--

The right side drop out hanger is replaceable and can be ordered with parts number 229735

# GAMBLER 2013

## CABLE ROUTING

The cable routing on Gambler is quite easy to do, please just use cable zippers on the cable parts on the tubes.

For the rear derailleur the housing is hidden inside the chainstay as shown in the drawing below.

## DOWN TUBE PROTECTOR

The down tube of a DH bike gets abused by rocks kicked up by the front wheel on a regular basis. This adhesive backed light-weight guard provides huge protection where it matters most.

# GAMBLER 2013

## FRONT FORK SET-UP/CHANGE OF FRONT FORK

For the set up of the front fork please use the fork specific manual attached to the bike.

We recommend using front forks with a travel between 180 and 200 mm (568mm fork length), as this will not influence the geometry and alter handling of the bike.

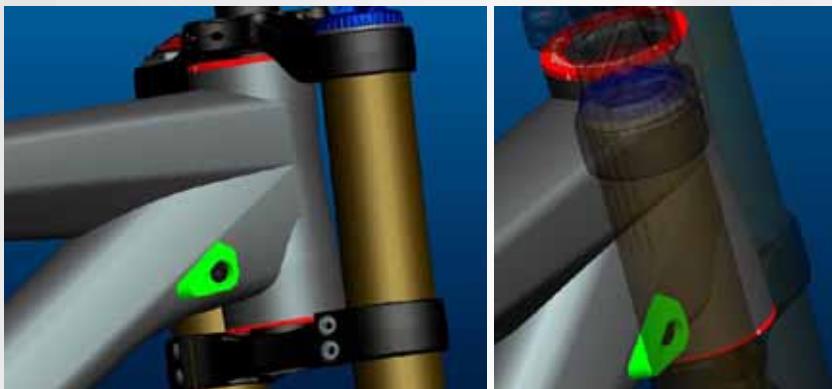

## FRONT FORK BUMPER

In order to avoid damages on the frame caused by the fork stanchions hitting the downtube in case of a crash the Gambler shows rivets on the front end of the downtube to assemble bumpers.

The bumpers can be replaced if needed. You can order them via the Scott distribution with article number:

### 229715 frame fork bumper Gambler

In order to replace them please use a 4mm allen key for the M5 bolt and please respect the maximum tightening torque of 5Nm/44in/lbs.

## PIVOT MAINTENANCE

The pivots and bearings on SCOTT Gambler are extremely easy to maintain. An external treatment with a grease spray after every bike wash is all you have to do. We do not recommend heavy grease sprays since these will leave a film on the parts which is difficult to remove. We recommend the same for the chain also.

If you have to change the bearings you can order them included in a service kit

### 229705

at your local SCOTT dealer or buy them with international parts number as shown above in the specs list in a hardware store.

In addition following parts of the rear suspension fixation can be bought separately:

229706	Floating Link Gambler 2013 one size
229707	Main Link Gambler 2013 one size

In case of a change of the bearings or of the rear swingarm you need a special tool kit for disassembly and assembly.

# 5 GAMBLER 2013 TOOLSET

SCOTT SUMMER 2013  
 TECH WORKSHOP

# GAMBLER 2013 TOOLSET

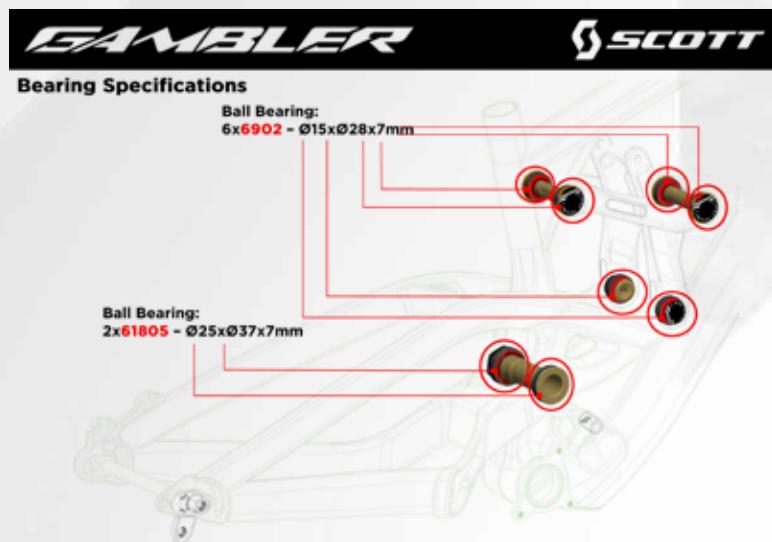

To repair or replace the bearings of the pivot points of Gambler we offer following articles:

22xxxx	Swingarm Tool Set Gambler 2013
229705	Bearing Set Gambler 2013
229706	Floating Link Gambler 2013
229707	Main Link Gambler 2013

The tool set will contain, beside all tools in stainless steel quality, a CD showing all steps of the bearing disassembly and assembly as well as all needed technical data as e.g. tightening torques etc.

The Swingarm Rep Set will contain beside the bearings all nuts and bolts to replace all moving parts or parts of wear and tear of a Gambler bike.

Please have a look at following pics giving you an overview about all needed steps and please make sure to use Loctite BLUE (still removable) on all screws:

Scott Bearing Service Kit Contents		
M8 x 55 Bolt, Nut, Washers	6902 Bearing Tube	Axle Punch

The bearings are standard size and can also be ordered in local hardware stores, in case customers do not want to replace all parts.

One frame needs following bearings:

**2 x 61805 (25 x 37 x 7)**

**6 x 6902 (15 x 28 x 7)**

# 6 RIDELOC

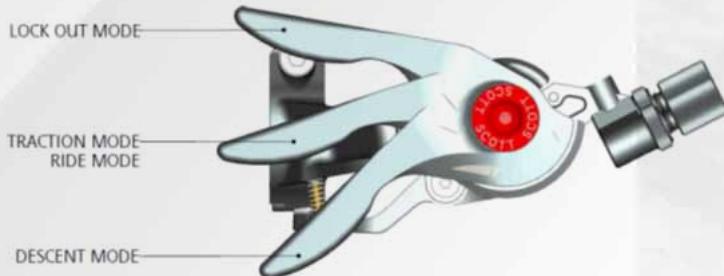

## RIDELOC

Rideloc is now introduced in MY 13 on several models of the Scale line.

A Rideloc (LRD) lever in combination with a SRAM/RockShox DNA3 or FOX CTD fork will allow you to ride the fork in 3 different options:

1. Lockout: fork completely locked
2. Ride mode: fork with platform mode
3. Descent: fork open, full travel

The function of the lever is more or less the same as on Spark or Genius but for sure without a second roll for the rearshock.

The lever is available as a spare-part with the Scott article number:

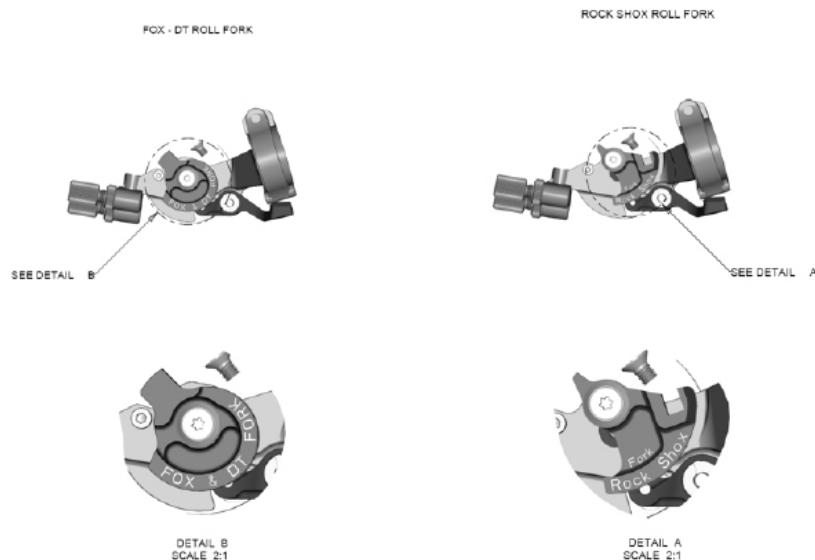

230099	Rideloc remote lever for Scale
--------	--------------------------------

# RIDELOC

For the assembly of the remote control of the front fork lock-out 2 different cable systems are existing.

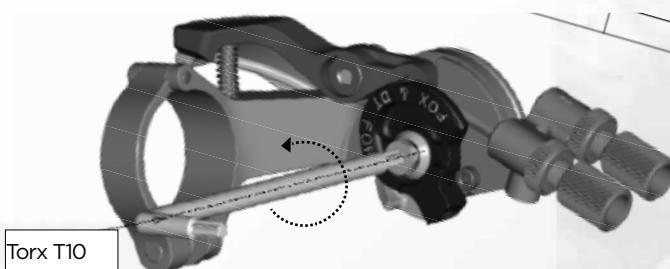

The different roll for the pull of the fork remote cable can be changed within few minutes to adapt the lever to your fork model/brand.

You will see on the downside of the roll the indication of fork brand.

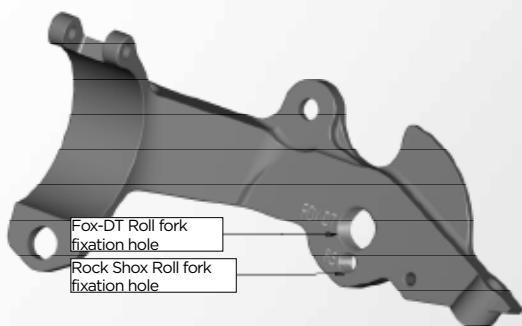

To change the rolls to match another fork brand pls follow the drawings below:

DISASSEMBLY:

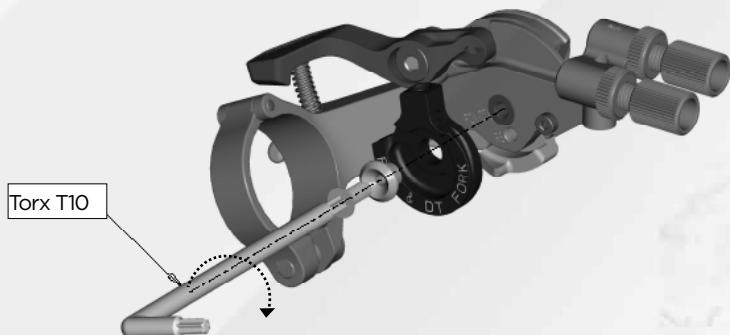

Please note that the 2 different rolls must be assembled in the indicated locations as shown below:

# RIDELOC

ASSEMBLY:

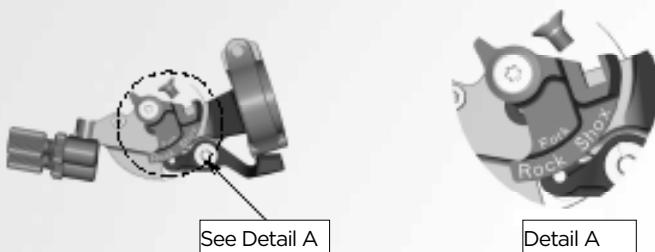

## ASSEMBLY OF THE REMOTE CABLE

SRAM/RockShox forks:

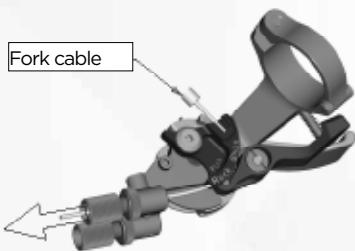

**Important:**

Please make sure the lockout of SRAM/RockShox fork is activated after transport correctly. Therefore please compress fork 5-10 times before following the manual on remote cable installation and adjustment.

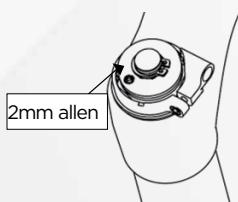

The lever should show on the downside of the able roll follow indication:

To assemble the cable please bring the lever into the All Travel Mode, push the cable into the lever-eyelet as shown on drawing below, push it through the pre-cut cable housing and fix it at the assembly unit on top of the right side of the fork crown.

Fix the cable with the 2mm allen screw on the barrel adjuster on the fork crown with a tightening torque of 0.9Nm/ 8lb/in, cut the cable and secure it with a cable end-cap. Please refer for this action also to the manual of SRAM/RockShox attached to the bike.

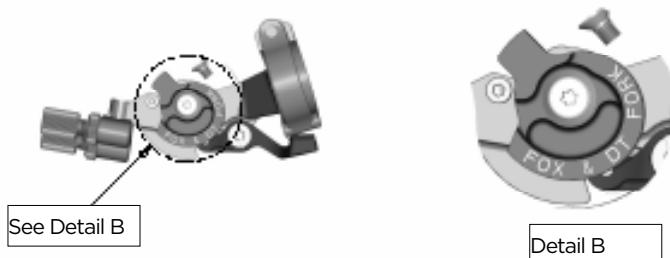

# RIDELOC

FOX-DT SWISS FORKS

**Important:**

Please make sure the lockout of FOX/DT fork is activated after transport correctly.  
Therefore please compress fork 5-10 times before following the manual on remote cable installation and adjustment.

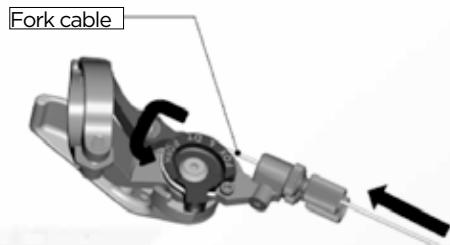

The lever should show on the downside of the cable roll follow indication:

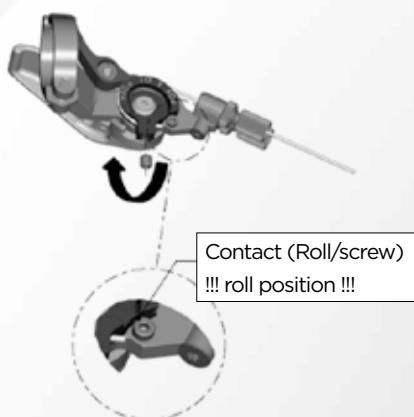

To assemble the cable please bring the lever into the Full (Travel) Mode

push the pre-cut cable through the pre-cut cable housing into the lever as shown on drawing below

and secure the cable by fixing the 2mm allen screw with a tightening torque of 0.9Nm/ 8lb/in as shown on the drawing below on the roll.

Cut the cable 5mm behind the roll and secure it with a cable end-cap.

7

# SCALE 600/900

## SCALE

The Scale frames remain unchanged in MY 13 and the line just got new names, 600 for 26" bikes, 900 for 29" bikes.

In addition some models got the Rideloc feature as explained in detail in the previous chapter.

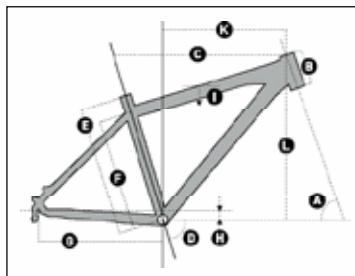

### TECHNICAL DATA SCALE 600 AND 900:

Seatpost diameter	34.9mm
Seattube clamp	38,2mm, some models with integrated seatclamp
Headtube diameter	11/8" /1.5", tapered, cups semi-integrated, 50-61mm cup OD
Fork travel	100mm
Fork length	471mm
BB housing	PF BB 92, PF BB 30
Rear Hub Width	135mm
Max tire width	57.0mm/2,25"
Chainring size	Min. 22T, max. 45T

# 8 SPARK 600/900

# SPARK

Spark SL 26"

Spark RC 29"

SCOTT SUMMER 2013  
TECH WORKSHOP

The Spark frames remain unchanged in MY 13 and the line just got new names, 600 for 26" bikes, 900 for 29" bikes.

In addition the new Twinloc XL system was split into 2 different options, depending on the models:

The TWINLOC XL remote control lever is the evolution of the already outstanding TRACLOC system of Scott.

While TRACLOC allowed only the change on the Scott TC rear shocks between the Scott patented Lock-out, traction and full-mode on the fly from the handlebar, the TWINLOC allows also the remote control of the front fork to shift between lock-out and open mode at the same time when you change the modes on the Scott rear shox.

In combination with FOX 32 CTD forks it is also possible to have a platform mode on the fork.

The 3 modes of LTD in combination with Nude 2 are:

- Lock-out Mode : lock-out rear, lock-out front
- Traction Mode: traction mode rear, platform mode front
- Descent Mode: full travel rear (Descent), full travel front

The 3 modes of LTD in combination with Nude 2 are:

- Lock-out Mode : lock-out rear, lock-out front
- Traction Mode: traction mode rear, platform mode front
- Descent Mode: full travel rear (Descent), full travel front

# SPARK

Therefore Scott offers 2 different TWINLOC XL levers with following fork/rear shock combinations:

- Nude 2 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230097)
- DT M3 with different rolls for FOX CTD fork and RockShox DNA 3 fork (Scott Article number: 230098)

Please note that the DT Swiss M3 rear shock does not offer a traction mode, but a platform mode. In contrary to Nude 2 the air-chamber volume of the positive chamber remains the same throughout the different modes

Important: you can only assemble the TWINLOC XL remote lever in "left side upward position" on the handlebar.

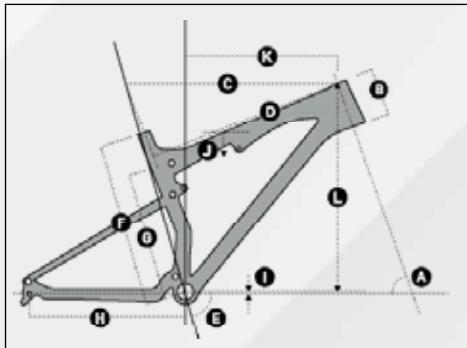

You have 3 positions of the TWINLOC XL remote lever.

1. **LOCK OUT MODE:**  
the shock is locked; climbing on asphalt roads is now possible without any power loss.  
Simultaneous a blow-off-system prevents the shock being damaged in case the rider did not open the system while crossing obstacles.
2. **TRACTION/Ride MODE:**  
For Traction: by reducing the internal chamber volume inside the shock the travel of the shock will be reduced to around 60% (approx. 85/70mm) the characteristic of the air spring gets harder. This results in climbing without "bobbing" and offers still optimum traction of the rear wheel.  
For Ride: by adding a platform on the compression damping system the shock will not bounce while standing on the pedals
3. **DESCENT MODE:** full travel of 120/100mm (26"/29")

For more details on cable adjustment and change of rolls for another fork model please refer to chapter 3 of this Tech Book.

# SPARK

To repair or replace the bearings of the pivot points of Spark we offer the following articles:

Item	Description
223289-222	Tool Set Swingarm Spark 2012
223301-223	Swingarm Repair Kit Spark 2012
223302-222	Igus Bushing Set Spark 2012 CST/SST
223303-222	Ind. Bearing Set Spark 2012 CST/SST

The Tool Set will contain, besides all tools in stainless steel quality, a CD showing all steps of the bearing disassembly and assembly as well as all needed technica data as e.g. tightening torques etc.

The bearings are standard size and can also be ordered in local hardware stores, in case customers do not want to replace all parts.

One frame needs following bearings:

**6 x 6802 (24mmx15mmx5mm)**

Beside this set Scott will also offer an "endurance kit" to replace the IGUS bushings in the seatstays with an industrial bearing kit.

This kit can be ordered at Scott:

223303-222 Ind. Bearing Set Spark 2012 CST/SST

In case you want to buy the IGUS bushing kit separately you can order it with

223302-222 Igus Bushing Set Spark 2012 CST/SST

SPECIAL PARTS

# 9 GENIUS LT

SCOTT SUMMER 2013  
 TECH WORKSHOP

# GENIUS LT

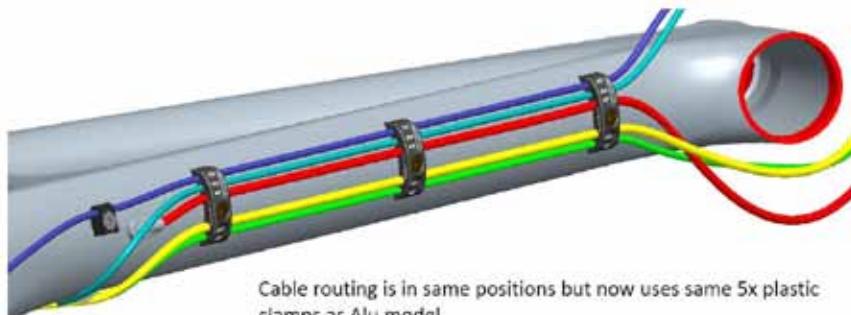

Genius LT 10

The frames of Genius LT Carbon and Alloy bikes of MY 2013 remain unchanged from MY 2012.

## GENIUS LT

The carbon frames now have the same cable fixing as the alloy frames:

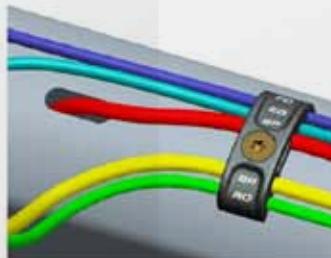

Cable routing is in same positions but now uses same 5x plastic clamps as Alu model

In addition for the Genius LT 10 Scott offers inline a special seatpost model of the SRAM RockShox Reverb called Stealth.:

The cable housing moves on the downside of the downtube inside the frame for a cleaner look and a better performance.:

Genius LT 10 Models will use a Seat Post with internal cable routing. The cable will enter the frame at bottom of DT and run up the ST to the Post. This part must be assembled by the customer.

## GENIUS LT

As the shops need to install and re-bleed the system after assembly of the seatpost it is important to follow exactly the details shown on the instruction movie at following link:

<http://www.youtube.com/watch?v=UMH3fbTL7Cw>

Framesets will have both versions of the plug to seal the downtube:

Framesets will have both versions of the plug to seal the downtube:

A complete kit of the new clamps and downtube plugs we use on the LT bikes can be ordered with parts number

---

**224419**

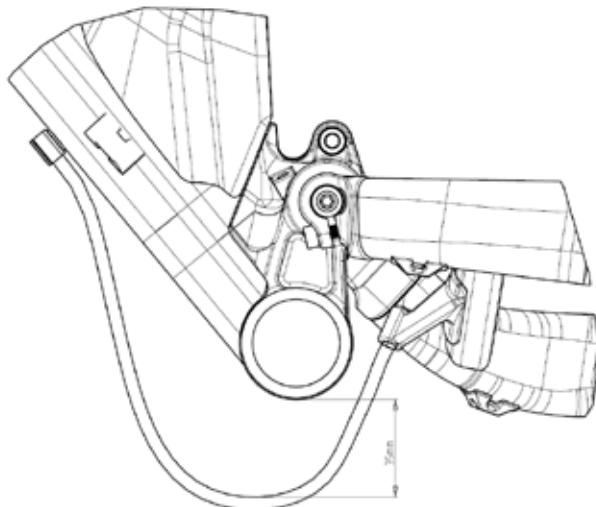

Cable Clamping Set Genius LT 2012

---

# GENIUS LT

## CABLE HOUSING LENGTH

In order to avoid damages on the frame/derailleur and/or "ghost-shifting" which could result in dangerous riding please note that under the BB housing the distance between the cable housing and the BB shell should be minimum **45mm**.

For After Sales Service Scott recommends following parts:

To repair or replace the bearings of the pivot points of Genius we offer following articles:

---

**219553** Tool set swingarm Genius LT 2011

---

**219565** Swingarm-Rep. Kit Genius LT

---

The tool set contains, beside all tools in stainless steel quality, a CD showing all steps of the bearing disassembly and assembly as well as all needed technical data as e.g. tightening torques etc.

The Swingarm Rep Set contains beside the bearings all nuts and bolts to replace all moving parts or parts of wear and tear of a Spark bike.

The bearings are standard size and can also be ordered in local hardware stores, in case customers do not want to replace all parts.

One frame needs the following bearings:

4 x 6802 (15x24x5mm)

2 x 6803 (17x26x5mm)

2 x 61800 (10x19x5mm)

## ► QUICK START

**SCOTT**  
*equalizer*

Engineered for **OFF ROAD**

### 1 LEVER POSITION FOR SET-UP

Lock out Mode

Traction Mode

Full Travel Mode

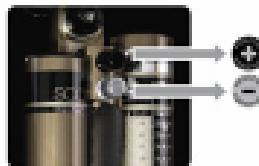

► LEAVE THE LEVER  
ON THE FULL MODE POSITION

Position	Lock Out	Travel
1	40	40
2	6,5	45
3	7	50
4	10	55
5	10,5	60
6	11	65
7	12	70
8	12,5	75
9	13,5	80
10	14	85
11	14,5	90
12	15	95

### 2 PRESSURE ADJUSTMENT

1. Remove the valve cap of the positive valve.
2. Pump the recommended pressure into the shock.
3. Same operation with the negative chamber.

### 3 HOW TO USE SHOCK PUMP

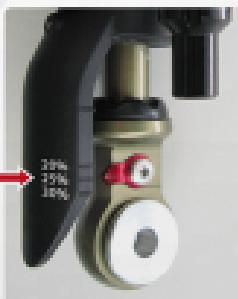

Make sure to balance at least this air loss when you make a check of the air pressure of the shock. Please also note that the indicators of shock pumps have a tolerance of max. 10%.

### 4 SAG INDICATOR

- If the arrow is at a lower percentage indication than the one of your choice the air pressure in the positive air chamber is too high.
- If the arrow is at a higher percentage indication than the one of your choice the air pressure in the positive air chamber is too low.

► RECOMMENDED  
SAG: 25%

### 5 SET-UP OF REBOUND

Please make sure that both rebound wheels show the same number below the arrow on the shock body.

► RECOMMENDED REBOUND:  
GENIUS: 6  
GENIUS LT: 8

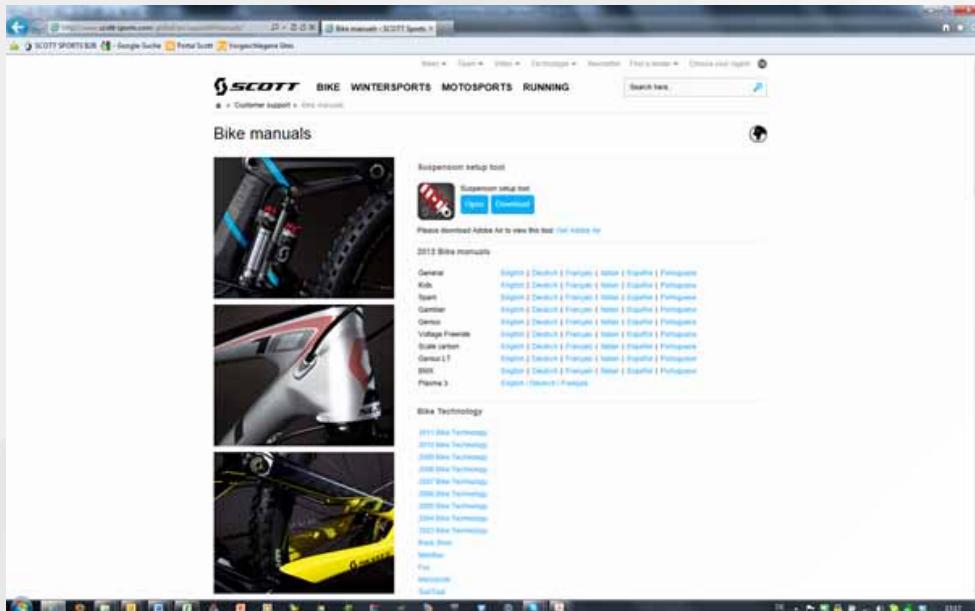

# 10 SCOTT SET-UP TOOL ONLINE ON SCOTT WEBSITE

# SCOTT SET-UP TOOL

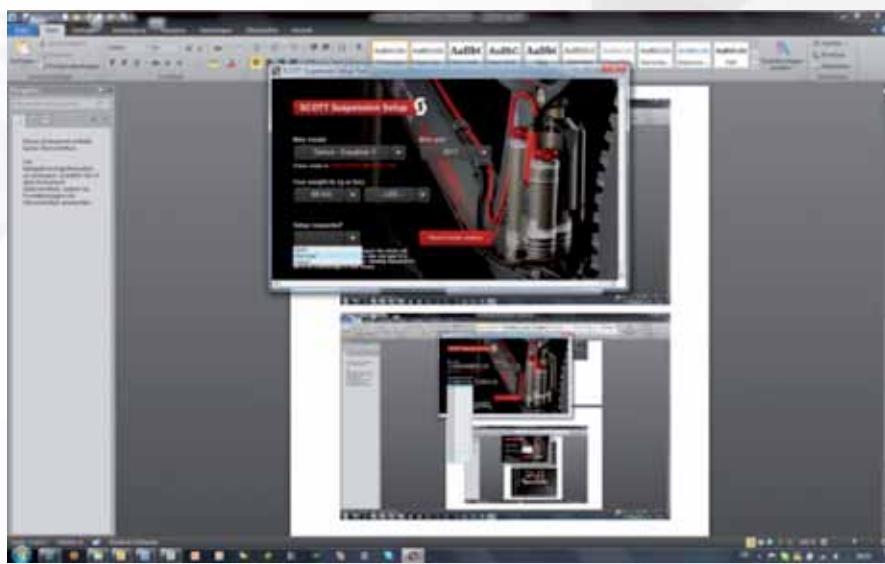

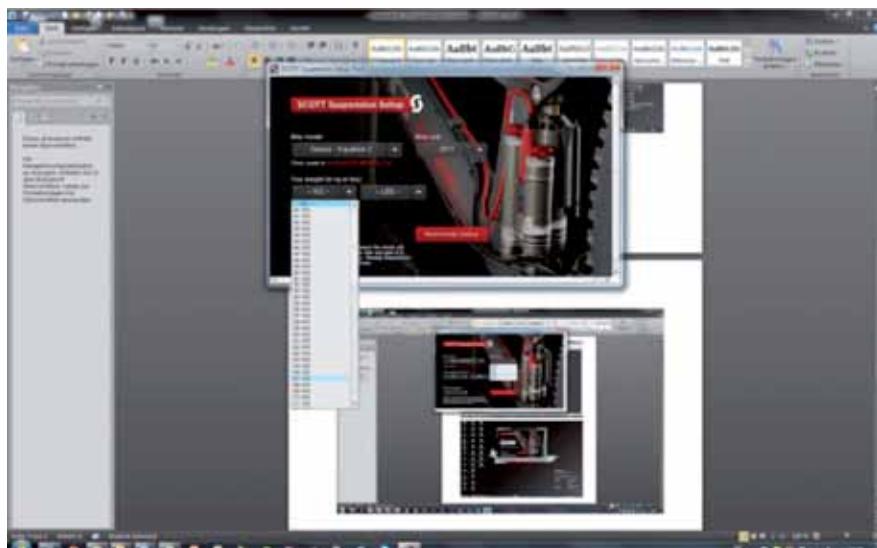

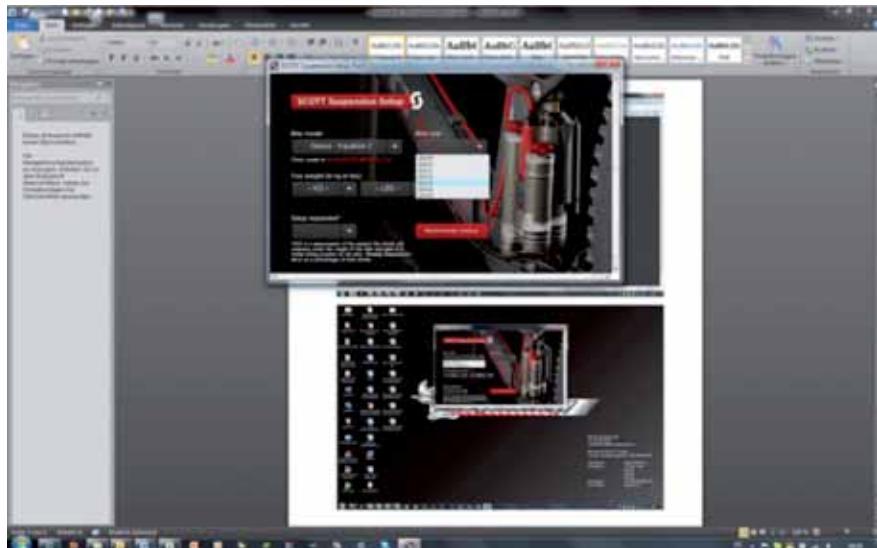

New for MY 13 we have a Set-up Tool for download from our website in the support area.

With the help of this tool you can finetune your suspension step by step beside the information provided in the manual attached to each bike.

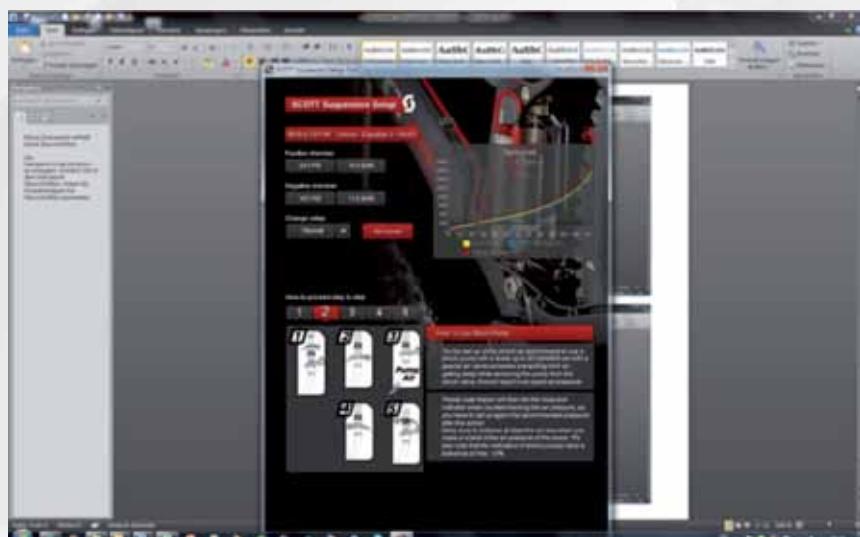

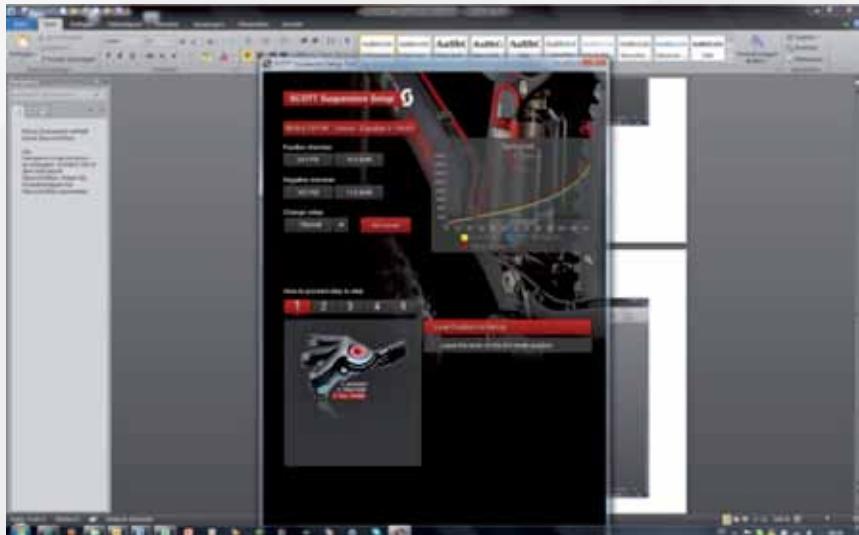

This tool is also on the CD attached to each manual.

# 11 SCOTT SHOX SERVICE

SCOTT SUMMER 2013  
 TECH WORKSHOP

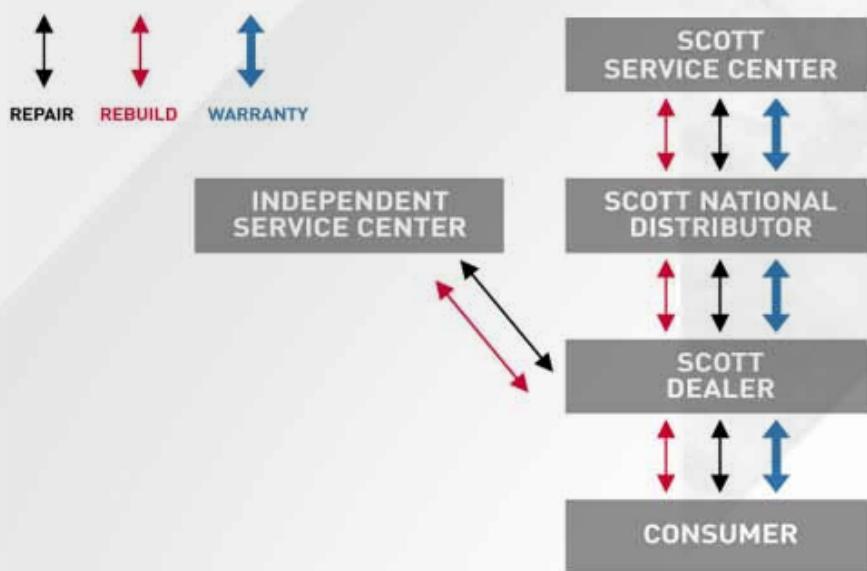

# SCOTT SHOX SERVICE 2013

Please kindly note that the following is only for Genius TC, LC, LC-R and Equalizer 1 shocks! If you need service or warranty support for an Equalizer 2, Equalizer 3, Nude TC or Nude 2 shock please contact the DT service network as shown in the chapter of DT Swiss or on the website of DT Swiss.

## SCOTT SHOCKS SERVICE/ WARRANTIES

For the maintenance of Scott Shocks please follow the service indications as shown below:

### SCHEMATIC FOR SERVICE PROCEDURE

**The annual maintenance of the Scott Shock is obligatory to keep the 2 years of warranty period as otherwise the shock will suffer from wear and tear which is not included in warranty.**

Please check for details your Scott Shock Owners Manual.

For the annual maintenance pls contact your national Scott Shock Service Center as shown in the list below via your authorized Scott dealer.

## ANNUAL MAINTENANCE

- new oil
- all seals of moving parts
- all sliders
- all O-rings
- new decals

Recommended retail price at your Scott Dealer:

Genius TC: 95 €

Equalizer OTS: 95 €

Scott LC: 90 €

Scott LC-R: 90 €

plus additional freight costs.

This price is recommended in case the shock was given to a Scott Service Center by your local Scott dealer.

# 12 ASPECT 600/900

## ASPECT 600/ASPECT 900

ASPECT 10

ASPECT 26" in MY 2012 keeps the same frame as in MY 2011.

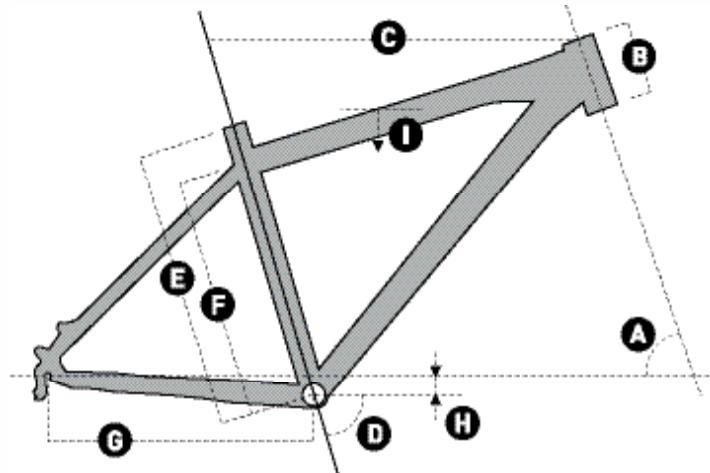

New in 2012 we have several 29" models of ASPECT: ASPECT 29 SPORT, TOUR and TRAIL.

Those bikes are offering a perfect blend of the easy handling of ASPECT bikes on the trails with the advantages of the 29" wheel size.

In addition SCOTT offers an E-ASPECT 29. For details on this model please refer to chapter 23 for SCOTT E-Bikes.

# 13 VOLTAGE

SCOTT SUMMER 2013  
 TECH WORKSHOP

# VOLTAGE

Voltage MY 2013 frames stay the same as in MY 2012

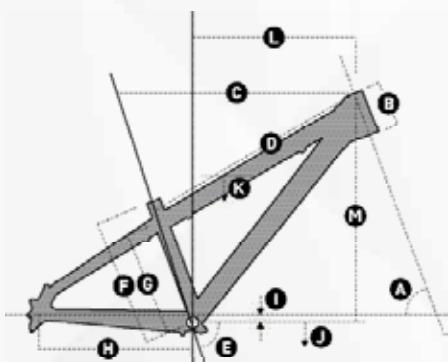

4 different frames (A, B, C and D frame) are in production for MY 2013 Voltage

B and D share the same geometry, so overall there are 3 different geometries as shown in chart below:

VOLTAGE YZ TMO:

<b>Headset</b>	11/8" standard ahd
<b>BB housing TMO - 0.2</b>	73mm
<b>BB housing 10 - 40</b>	68mm
<b>Seatpost diameter TMO - 0.2</b>	31.6mm
<b>Seatpost diameter 10 - 40</b>	26.8mm

Please check carefully the technical data sheets when using a MY 2013 frame for replacement of MY 09 and older frames to ensure full compatibility of the components.

# 14 VOLTAGE FR

SCOTT SUMMER 2013  
TECH WORKSHOP

# VOLTAGE FR

Voltage FR only has one change for 2013:

Voltage FR 30 2013 has a 241 eye to eye shock & 160-180mm of travel, changed from the FR 30 2012 which had 215mm eye to eye shock and 150-170mm of travel.

Voltage FR

**For After Sales Service Scott recommends following parts:**

---

**216341** Tool set swingarm Voltage FR

---

**216348** Swingarm repair kit Voltage FR

---

The tool set contains tools in stainless steel quality, a CD showing all the steps for the bearing disassembly and assembly as well as all the needed technical data e.g. tightening torques etc.

The Swingarm Rep Set will contain beside the bearings all nuts and bolts required.

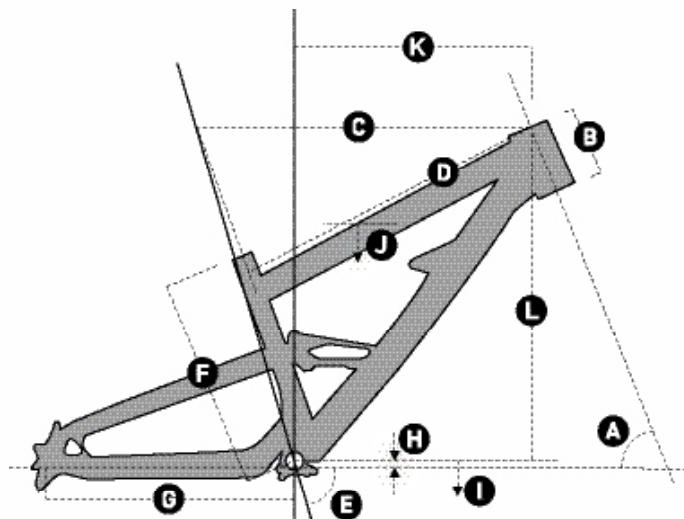

The bearings are standard size and can also be ordered in local hardware stores, in case customers do not want to replace all parts.

One frame needs following bearings:

- 2 x 61901 (24x12xT6)
- 6 x 61902 (28x15xT7)

# CONTESSA

## CONTESSA SPARK

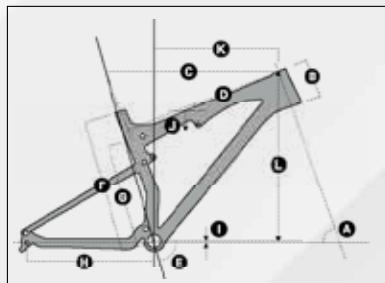

The Contessa Spark in MY 2013 will only be two models, the Contessa Spark 900 RC Carbon and the Contessa Spark 900 Alloy.

Both models will be 29ers and will have the new Fox 32 Float CTD fork (climb/trail/descend), in two versions. Contessa Spark 900 RC will have the Factory version with a tapered steerer and the Contessa Spark 900 Alloy will have the Evolution version with a 11/8 steerer.

The geometry on the Contessa Spark 900 RC will be the same as the men's Spark 900 MY 2013 and the Contessa Spark 900 Alloy will have a different geometry incorporating a shorter top tube.

## CONTESSA SCALE

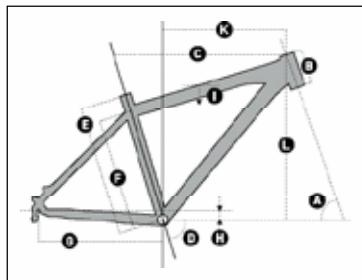

The Contessa Scale in MY 2013 will follow the same line as the Contessa Spark MY 2013 with all the models being 29ers.

Both the Contessa Scale 900 RC and Contessa Scale 900 series will have their own specific geometries.

Please be aware of the frame size range between the carbon models to the alloy models

# 17 ADDICT WARRANTY INFO

## ADDICT WARRANTY INFO

As we discontinue the production od Addict in MY 13 we do not have Addict frames anymore in the regular order forms or dealer books.

To ensure a good service we still can offer Addict replacement frames for warranty with following article numbers:

Item	Description
<b>220365</b>	Frame set Addict RC 11 ISP/IBB Warranty
<b>218782</b>	Frame set Addict RC 11 (HMX)ISP/SBB Warranty
<b>225314</b>	Frame set Addict RC'11 Warranty ssp/ibb
<b>225315</b>	Frame set Addict RC'11 Warranty ssp/sbb

Please kindly note that we will not change Addict frames to Foil frames in case of warranty due to the incompatibility of several frame parts as. E.g. fork, seatposts etc.

# 18 FOIL

SCOTT SUMMER 2013  
TECH WORKSHOP

# FOIL

The Foil MY2013 will stay the same as MY 2012 with only one addition.

Foil bikes/frames are available in 3 versions:

- Mechanical shifting
- Shimano Di2 (different cable routing inside the frame, no cable hole/stop on left downtube side)
- Campagnolo EPS Frameset Only.

(The FOIL Premium EPS Frameset is compatible with Press Fit BB Campagnolo Ultra Torque OS-FIT 86.5 mm x 41, and it will come with the Frameset).

## FOIL

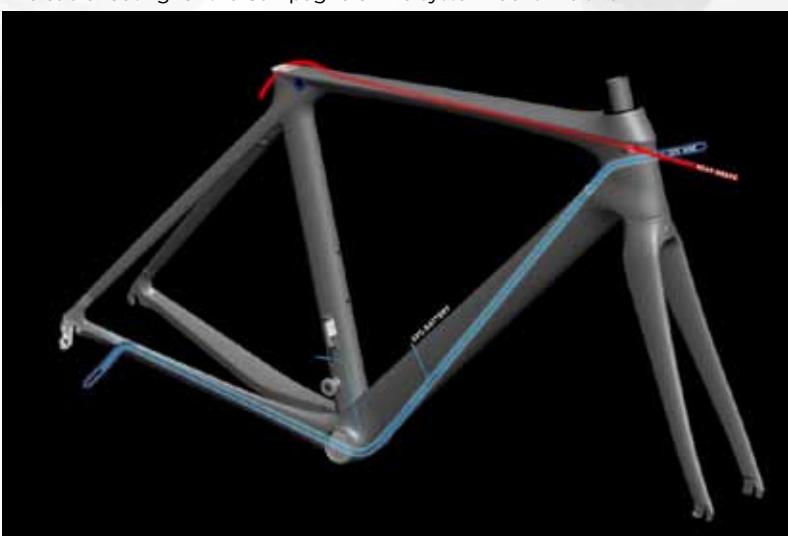

The cable routing inside the frame for mechanical shift systems looks like this:

The cable routing inside the frame for Shimano Di2 looks like this:

The cable routing for the Campagnolo EPS system looks like this:

# FOIL

All frames are for integrated BB cups of BB 86PF.

Parts numbers of vendors:

<b>Shimano</b>	ISMFC7800P
<b>Campagnolo</b>	IC9-RE41
<b>SRAM</b>	00.6415.033.000 (GXP), 00.6415.033.010 (GXP ceramic)
<b>FSA</b>	230-6011 (standard), 230-6010 (ceramic)

**Please follow the assembly instructions and tool recommendations of the different BB manufacturers, as some require the use of specific tools.**

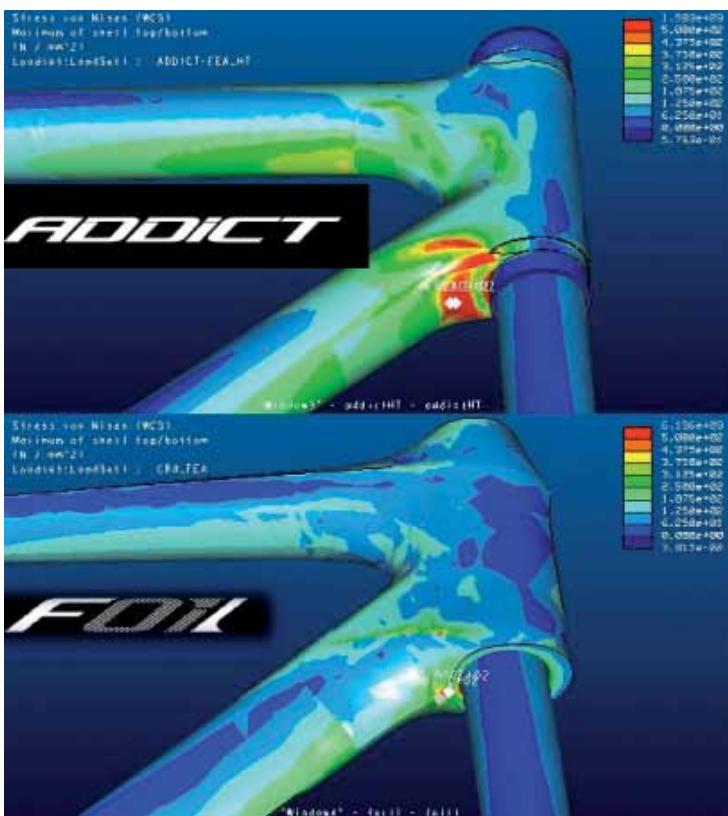

The drawing above shows following parts which we have on stock at Scott with parts numbers:

Item	Description
219512-222	Headset Ritchey Foil 50/55mm 1size
219582-222	Seatclamp System Foil 2011 1size
219583-222	Dropout Hanger Foil 2011 1size
219584-222	BB Cableguide Foil 2011 1size
221653	Chinguide System Foil 2011 1size
221654	FD Mount Adapter Plate Foil 2011 1size

# FOIL

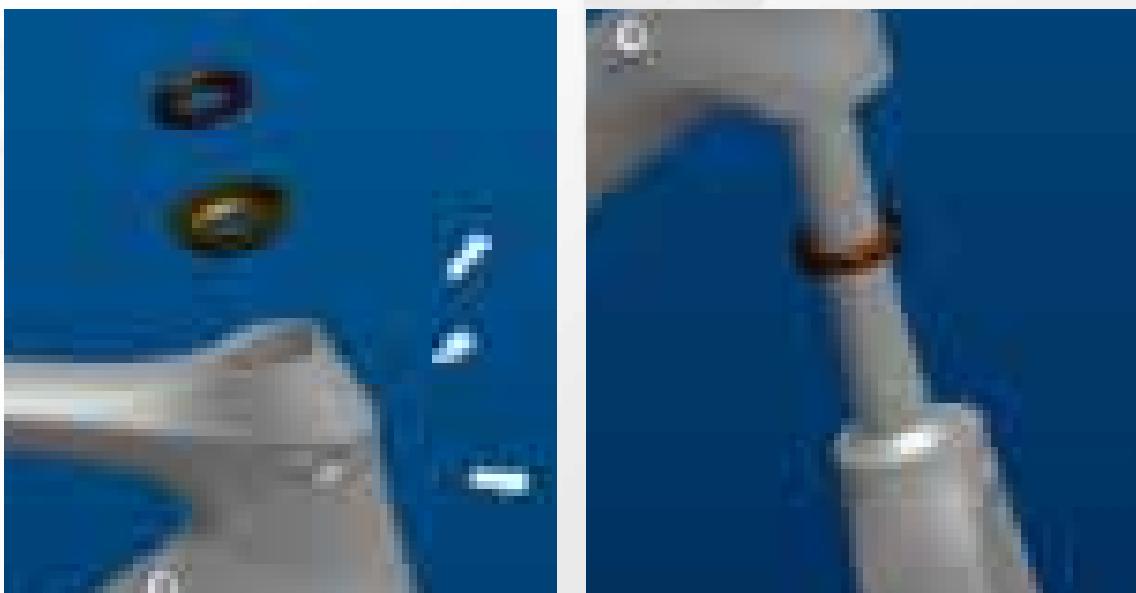

## HEADSET

Foil shows a tapered headset of 11/8" semi-integrated to 1¼" direct assembly. With this design the Foil has a reduction of 20% of stress on the frame in the headtube section.

The upper part of the headset is a standard semi-integrated headset with 44.0mm cup, the lower headset is 1¼" and is made from Ritchey for Scott.

Please note that the lower bearing of the headset is mounted directly on the carbon crown race of the fork and inside the frame. No adapters or semi-integrated cups are needed.

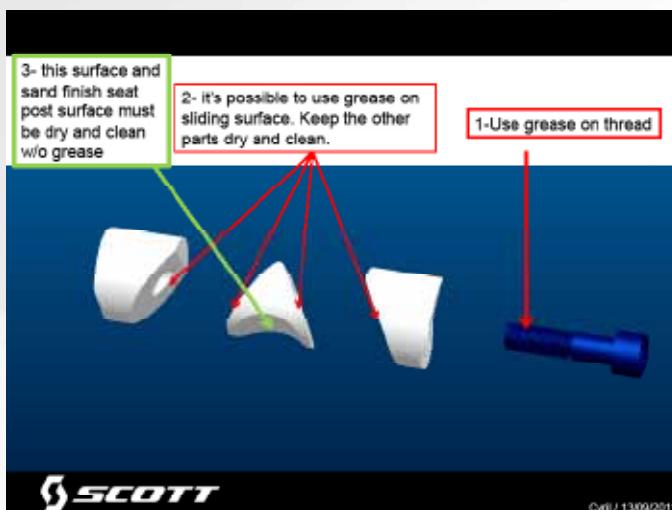

# FOIL

## SEATPOST SYSTEM:

The seatpost is fixed in the frame with a special clamp mechanism.

The recommended tightening torque is 10Nm/88 in/lbf, the maximum tightening torque of the wedge mechanism is 12 Nm/106 in/lbf.

**Less force is better for all parts!**

The seatpost for Foil is a specific item produced by Ritchey for Scott. All seatposts are Ritchey WCS Carbon in UD woven surface. Layback/offset of 0mm and 25mm only.

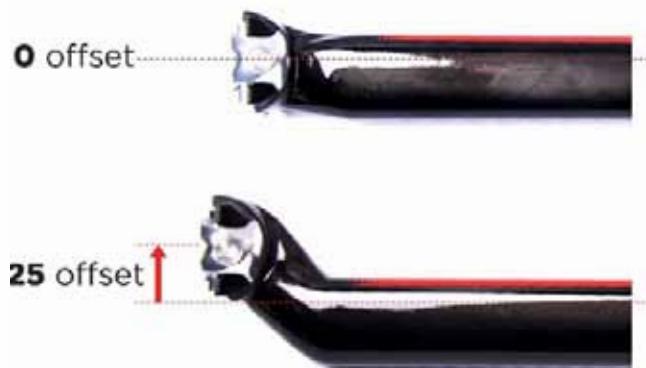

We do carry following specs on stock:

Item	Description
229697	Seatpost Foil Premium MY13 0MM & 25MM
229698	Seatpost Foil Premium MY13 0MM & 25MM
229699	Seatpost Foil 10 MY13 0MM & 25MM
229700	Seatpost Foil 15 MY13 0MM & 25MM
229701	Seatpost Foil 20 MY13 0MM & 25MM
229702	Seatpost Foil 30 MY13 0MM & 25MM
229703	Seatpost Foil 40 MY13 0MM & 25MM
229704	Seatpost Foil Contessa MY13 0MM & 25MM

## FOIL

All seatposts are Ritchey WCS Carbon in UD woven surface.

A offset of 0mm and 25mm is available.

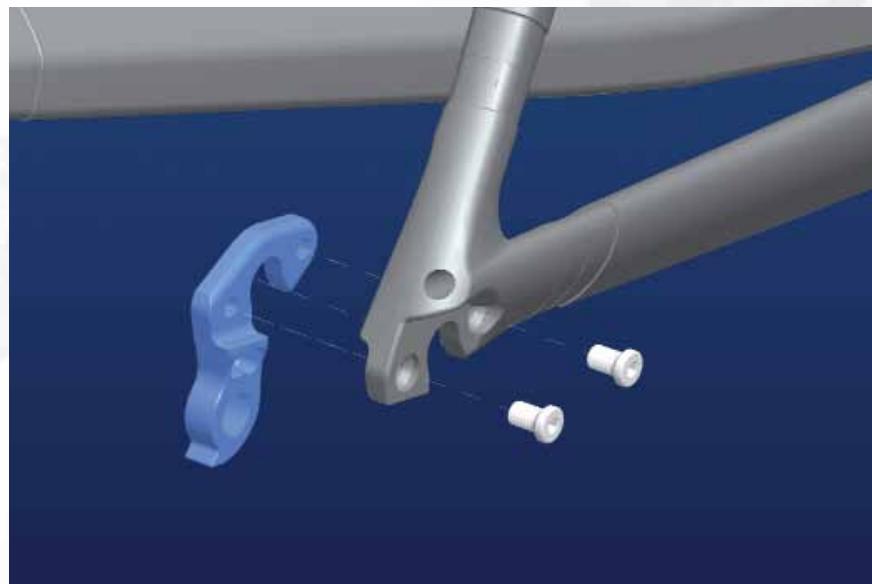

Frame sizes XXS to M will have seatposts with 0mm offset, the sizes L-XXL will have 25mm layback.

To mount a carbon railed saddle from an alloy railed saddle, please use the same clamp parts which are already used for the Addict Stubby and Plasma 2.

Item	Description
210331	Seatclamp Stubby adapt.f/carbon rail 1size

### REPLACEABLE DROPOUT HANGER

Foil has a specific replaceable dropout hanger which is mounted with 2 bolts with a max. tightening torque of 3 Nm/26 lbs/in

Item	Description
219583	Dropout Hanger Foil 2011 1size

# FOIL

## CABLEGUIDE SYSTEM

We offer a complete set of all cable stops and the BB cable guide plate.

Item	Description
219584	BB Cableguide Foil 2011 1size

# FOIL

## CHAINGUIDE SYSTEM

To stop the chain drops down onto the BB shell from the small ring the Foil offers a chainguide system for different sized chainrings.

This plate is mounted onto the seattube with a bolt. A set containing different washer sizes as well as the bolt can be ordered with the following part number:

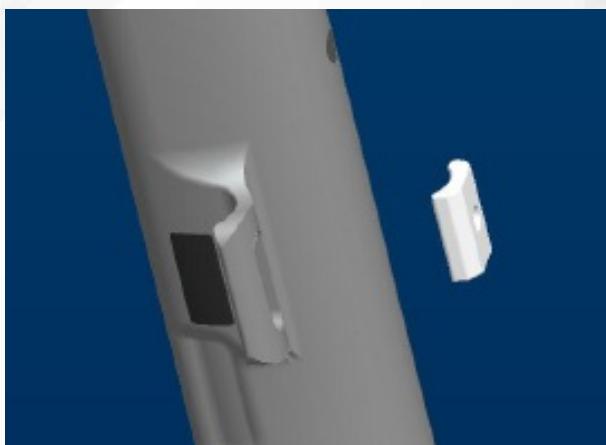

Item	Description
221653	Chainguide System Foil 2012 1size

## FD MOUNT PLATE ADAPTER:

To ensure a perfect mount and function of the FD it is important to use only the FD Mount Adapter Plate which is delivered with every bike and/or frameset. In case you need for service a replacement part we can offer this with

Item	Description
221654	FD Mount Adapter Plate Foil 2011 1size

**19** CR1

## CR 1

In MY 2013 the CR1 will have the same out lining features as in MY 2012.

CR1 Premium

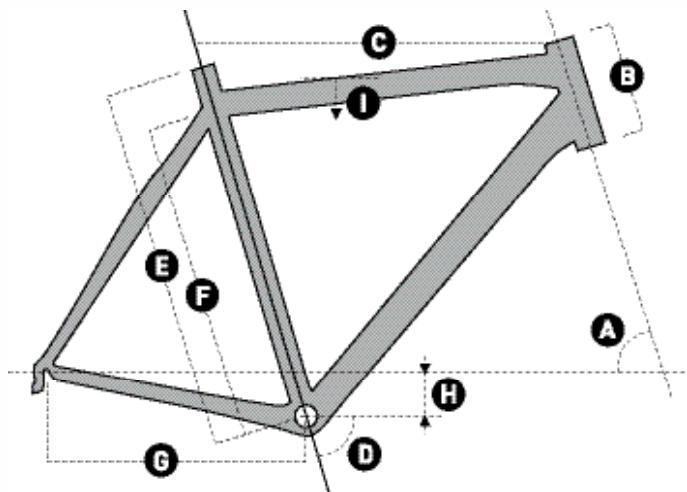

The main change to the range is the availability of a CR1 Premium HMF NET with a Di2 specific frame.

The CR1 Premium HMF NET frameset will also be available in Di2 only.

All CR1's will have PF86 BB for 2013

- 232213 frame set MY13 CR1 PRO SSP/SBB

**\*subject to availability.**

**Please note that we will not accept other replacements on those frames.**

# 20 SPEEDSTER

SCOTT SUMMER 2013  
 TECH WORKSHOP

# SPEEDSTER

The new Speedster for MY 2013 will offer a lot of new features in comparison to the old model. We bring the F01 concept to a great aluminum road frame to achieve the perfect balance between stiffness, weight, aerodynamics and price. In MY 2013 we have gained around 6% more BB Stiffness compared to the "old" model.

## We will have 3 different frame models in MY 2013!

Model "A" is the Top Model and offers the following features for Speedster 10 - 20 and Cont. 15

- Smooth welded seams
- Inner cable routing for the brake cables
- Inner cable routing for the shifting cables
- F01 Aero shaped tubes
- Double Butting
- Aero Fork

## SPEEDSTER

Model "B" is the second level and offers the following features for Speedster 30 - 50 and Cont. 25 - 45

- Double Butting
- F01 Aero shaped tubes
- Aero Fork
- Inner cable routing for the brake cables

Model "C" is the third level and offers the actual standards for a normal alloy frame for Speedster 60

# SPEEDSTER

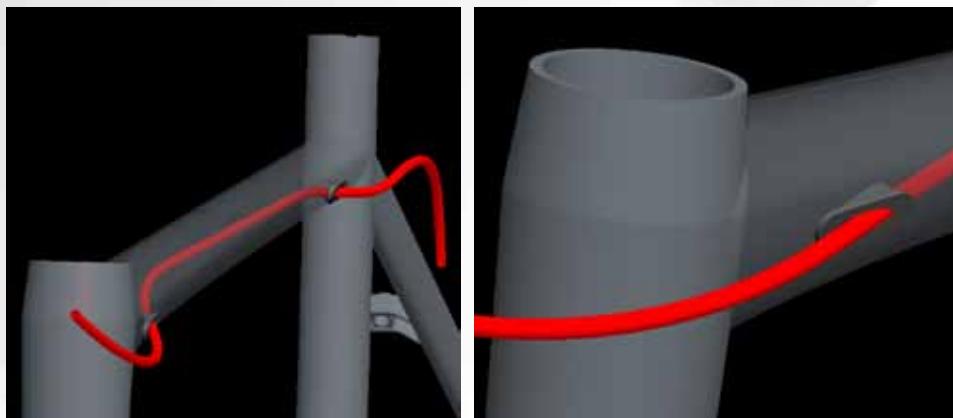

## INNER CABLE ROUTING AT TOP TUBE

You can find on the Frame options A and B a fully internal brake cable in the top tube. It is easy to install, all you have to do is to push the plastic parts over the outer casing and clip it these into the frame.

Please contact the QM Department if you need spare plastic clips.

We recommend that you put the brake cable through the top tube and then push the outer brake casing over the top of the gear cable from the rear of the frame.

# SPEEDSTER

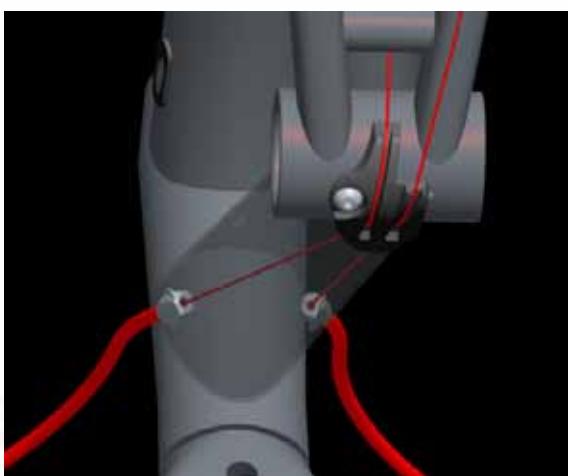

## INNER CABLE ROUTING AT THE DOWN TUBE

The "A" Version frame also has an internal cable routing for the shifting cables.

Please note you have to assemble the cables with the plastic guide already on the outer casing. To avoid some possible creaking noise, it is necessary to grease the guides before you put them into the frame.

Please take care that you do not cross the gear cables over inside otherwise it will not be possible to adjust the derailleurs efficiently.

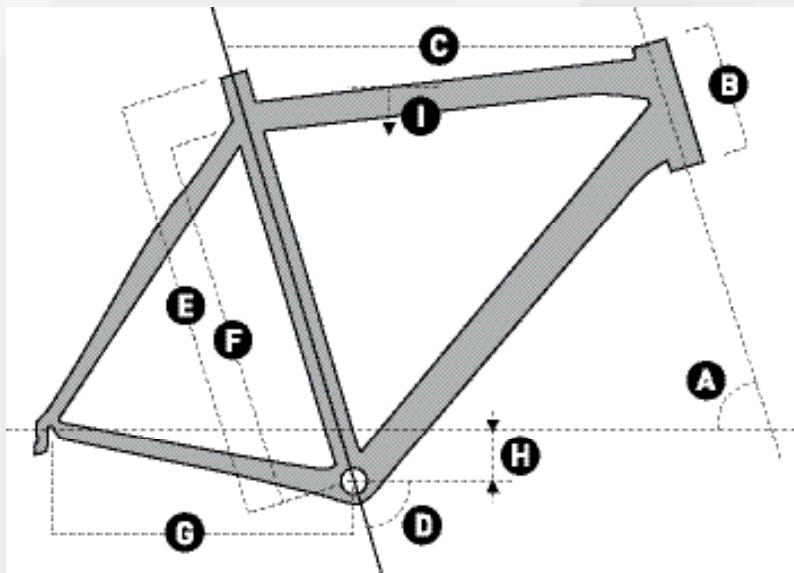

The Bottom Bracket on the "A" Frame has a screw fixed specific cable guide.  
Please contact the QM department if you need the Cable Guide for replacement or spare.

For all other Speedster frames we use an standard BB Cable Guide e.g. from Shimano

The drop out hanger is the same as the old model.

# 21 METRIX

SCOTT SUMMER 2013  
 TECH WORKSHOP

# METRIX

METRIX 10

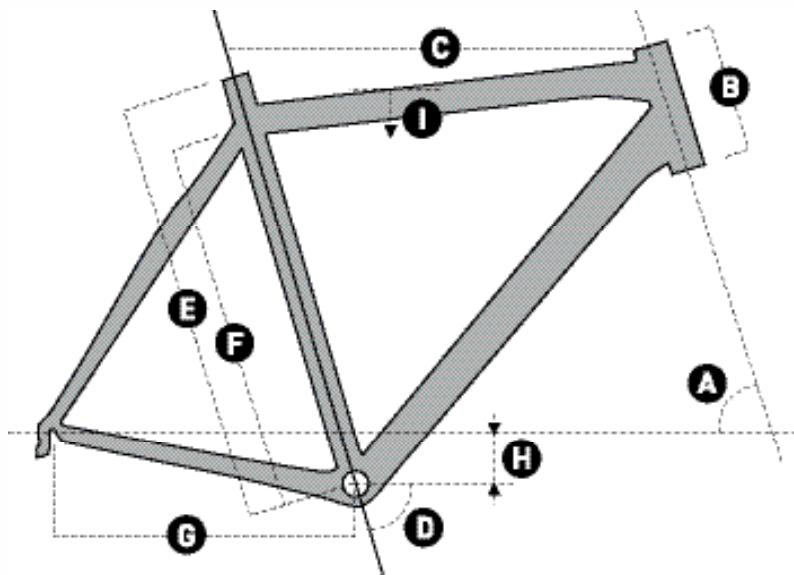

New in 2013 all Metrix Models have now V Brakes.

All of them share the same Geometry as last year's models. With a long headtube which allows a recreational ride.

Frames are ready to go for standard fenders in case needed.

# METRIX

# 22 PLASMA 2

SCOTT SUMMER 2013  
 TECH WORKSHOP

## PLASMA 2

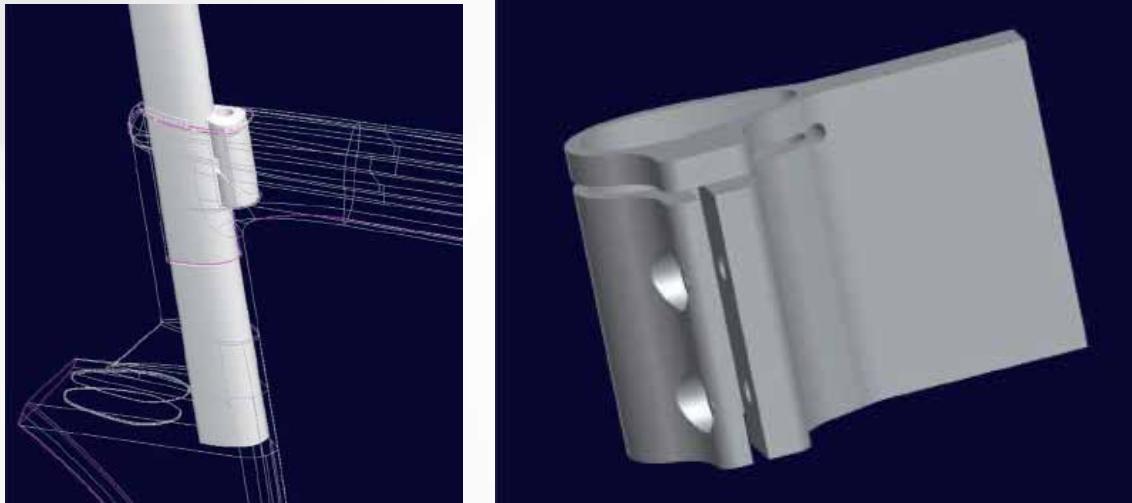

The Plasma 2 for 2013 stays the same as the 2012 version.

Please remember the specific features for this model explained below in the following text.

The seatpost for the Plasma 2 MY 2013 needs to be cut to the correct length for the customer.

Please make sure that the seatpost touches the base of the seatpost pocket inside the frame to avoid slippage.

You will find attached to each frameset and bike a seatpost cutting tool:

In case you need additional ones for your workshop you can order it with:

---

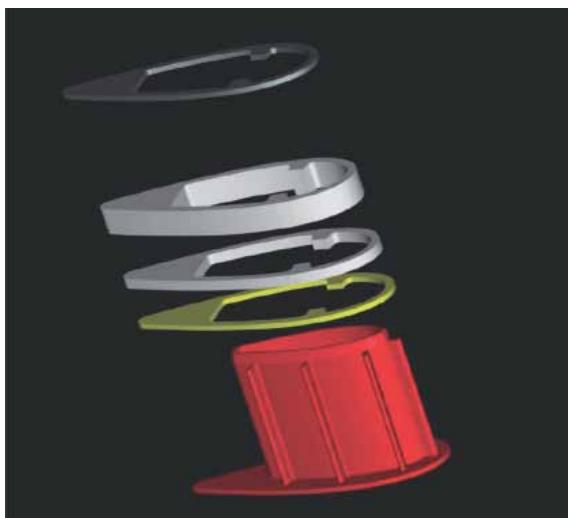

**224421**

Cutting Tool Seattube Plasma 2 MY 2012 one size

---

## PLASMA 2

In case the seatpost was cut too short or another rider wants to adjust the seat height but keep the seatpost maximum inside the seattube pocket you can use the adapter-set as shown below to adjust the length of the seatpost individually.

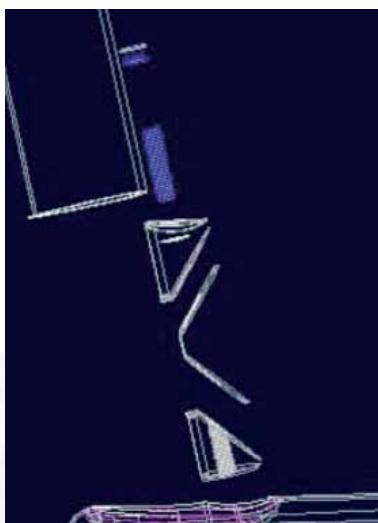

---

**224422** Seatpost Spacer Support Plasma 2 MY 2012 one size

**224423** Seatpost Spacer Set 1, 2, 5mm Plasma 2 MY 2012 PAK

---

The seatclamp system for the seatpost in the frame is available with

---

**224420** Seatclamp System Plasma 2 MY 2012 one size

2 Seatposts are available for service

---

**223287** Seatpost Plasma 2 Carbon UB matt

**223287** Seatpost Plasma 2 Carbon UB gloss

---

## PLASMA 2

To cut the seatpost according to the requested seat height of the customer please follow following steps:

The seatpost of the SCOTT Plasma 2 MY 2012 needs to be cut and adjusted to the personal seat height of the rider.

The tool to do so is added to your Plasma 2 MY 2012 and will help to cut properly without any risk of damaging your seat tube.

To do so, pls follow the instructions given below:

1. Take the exact measure of the distance ( $d_0$ ) from the mid of axle of your pedal to the upper side of the saddle you use already on your "old" bike which is exactly adjusted to your seat position.

**Important: pls note that the change to another saddle or pedal model might influence a lot the length of the seatpost!**

2. Mount your pedals and saddle on the Plasma 2 MY 2012 bike. For the cutting, position seatpost as low as possible in the frame and measure the distance ( $d_1$ ) from the mid of the pedal axle to the upper side of the saddle. Remove the seat clamp and measure the distance ( $d_2$ ) from the downside of the seatpost:  $d_2 = d_1 - d_0$
3. Indicate the length ( $d_2$ ) you want to cut on the seatpost with a marker pen.

4. Slide the Plasma Cutting Tool on the seatpost of Plasma 2 MY 2012 until the line of the marker is visible in the slot on the tool that will guide your saw blade. drawing
5. Fix the two 5mm bolts with a 4mm Allen key with a tightening torque of 6 Nm.
6. Take a saw with a blade for cutting metal. Please only use a 10D/24T teeth blade to make sure not to damage the carbon tube warning logo
7. Cut the tube, remove the tool and take sandpaper to smoothen the edges of the cutting area.
8. Remount the seatpost and tighten the wedge on the frame with a torque of 5 Nm.

# PLASMA 2

## Important

### HEADSET

The headset is different from the standard semi-integrated version normally used on Scott bikes.

The part can be ordered via the Ritchey distribution network or at Scott with

---

**212721**HEADSET Ritchey WCS f/PLASMA 2 1size

---

### REAR BRAKE

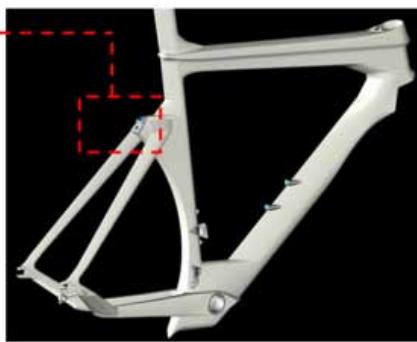

The rear brake on Plasma2 is mounted to an adapter which will be fixed together with the rear brake on the monostay of the seatstay section.

The part can be ordered at Scott with

---

**212755**PLASMA 2 rear brake adaptor 1size

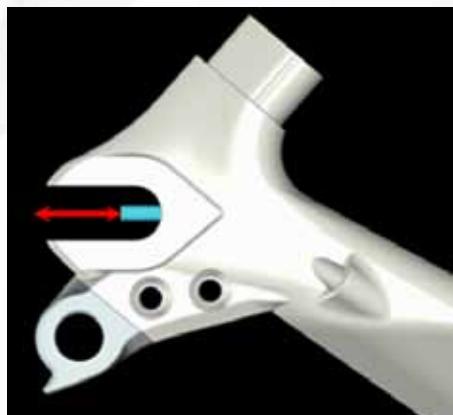

---

SCOTT SUMMER 2013  
TECH WORKSHOP

### REAR WHEEL FINE TUNING SCREWS

The screws inside the backward opened dropout on Plasma2 are replaceable.  
In case you need them for service please contact Patrick Bochud or Holger Klinger at Scott Sports SA

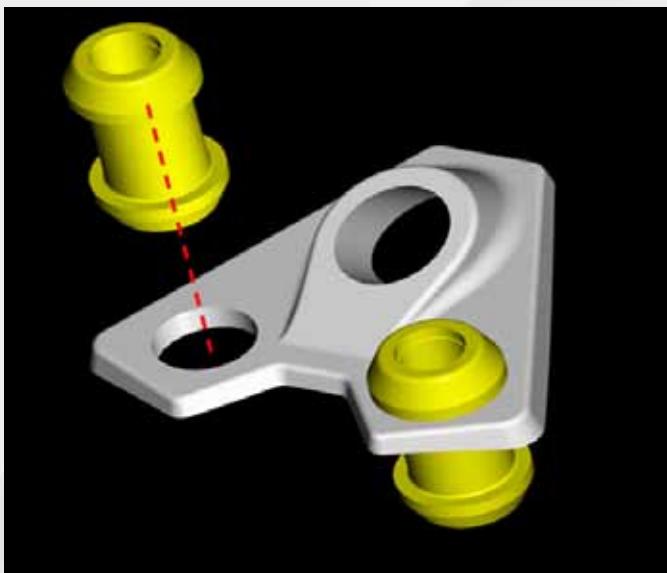

# PLASMA 2

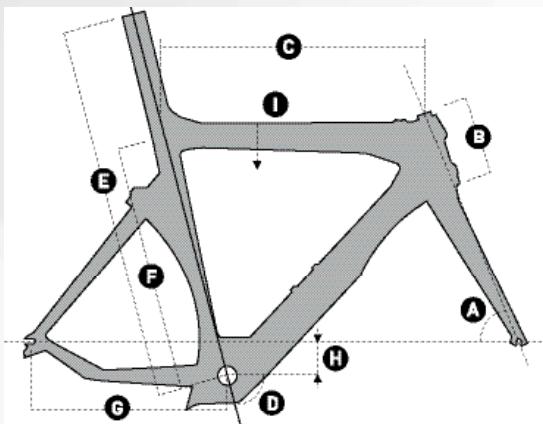

## CABLE-INLETS

The cable-inlets are sealed against water with a set of specific Plasma 2 rubber seals.

In case you need them for service please contact Patrick Bochud or Holger Klinger at Scott Sports SA.

# 23 PLASMA 3

SCOTT SUMMER 2013  
 TECH WORKSHOP

# PLASMA 3

Plasma 3 complete Bike stays the same in MY13 as in MY12

SCOTT SUMMER 2013  
TECH WORKSHOP

There is one change for MY13, the Plasma Premium Di2 Frameset will have an easier internal cable routing and battery mounting than on the Plasma TT from MY12. The frame returns to a more standard handlebar set-up and an underside BB/chainstay Di2 battery mount.

Please note there will only be bottle cage mounts on the seat tube on the Plasma Premium Di2 frameset.

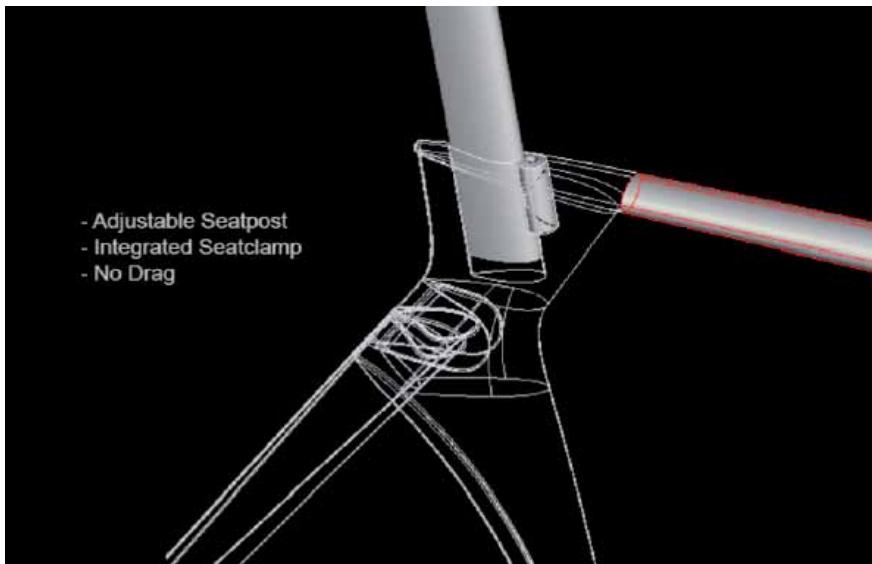

Both the complete bike and the frameset comply completely with the rules of the UCI in regards to time trial bikes.

Both the Plasma Premium and Plasma Premium Di2 framesets will be delivered with a 40° rise stem without handlebar.

The stems are available in 75mm and 90mm length.

## PLASMA 3

The seatpost of Plasma 3 needs to be cut on its downside. Please make sure that the seatpost touches the base of the seatpost pocket inside the frame to avoid a slipping seatpost.

You will find attached to each frameset and bike a seatpost cutting tool:

To cut the seatpost according to the requested seat height of the customer please follow following steps:

The seatpost of the SCOTT Plasma 3/TT needs to be cut and adjusted to the personal seat height of the rider.

The tool to do so is added to your Plasma 3/TT and will help to cut properly without any risk of damaging your seat tube.

# PLASMA 3

To do so, pls follow the instructions given below:

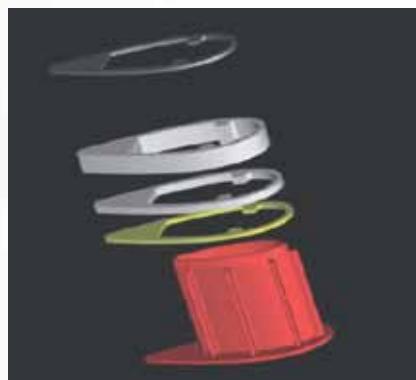

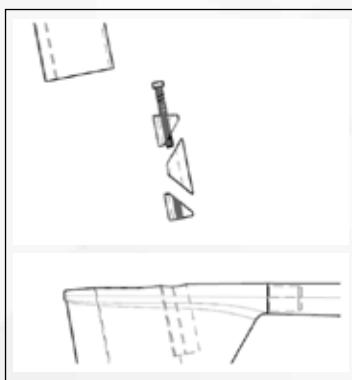

1. Take the exact measure of the distance ( $d_0$ ) from the mid of axle of your pedal to the upper side of the saddle you use already on your "old" bike which is exactly adjusted to your seat position.

**Important: pls note that the change to another saddle or pedal model might influence a lot the length of the seatpost!**

2. Mount your pedals and saddle on the Plasma 3/TT bike. For the cutting, position your seatpost as low as possible in the frame and measure the distance ( $d_1$ ) from the mid of the pedal axle to the upper side of the saddle. Remove the seat clamp and measure the distance ( $d_2$ ) from the downside of the seatpost:  $d_2 = d_1 - d_0$
3. Indicate the length ( $d_2$ ) you want to cut on the seatpost with a marker pen

4. Slide the Plasma Cutting Tool on the seatpost of Plasma 3/TT until the line of the marker is visible in the slot on the tool that will guide your saw blade. drawing
5. Fix the two 5mm bolts with a 4mm Allen key with a tightening torque of 6 Nm.
6. Take a saw with a blade for cutting metal. Please only use a 10D/24T teeth blade to make sure not to damage the carbon tube warning logo
7. Cut the tube, remove the tool and take sandpaper to smoothen the edges of the cutting area.
8. Remount the seatpost and tighten the wedge on the frame with a torque of 5 Nm.

In case the seatpost was cut too short or another rider wants to adjust the seatheight but keep the seatpost maximum inside the seattube pocket you can use the adapter-set as shown below to adjust the length of the seatpost individually.

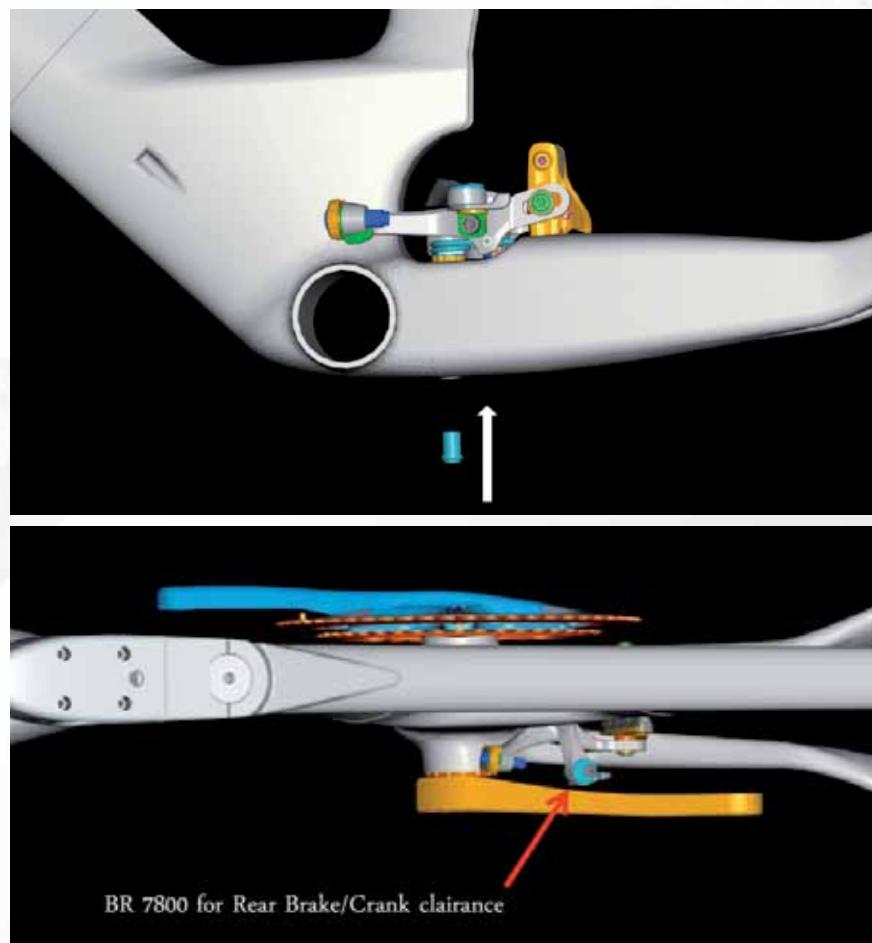

# PLASMA 3

## Rear brake Plasma 3

We strongly recommend the use of the Shimano BR-7800 brake, as this brake will offer enough clearance between the brake arms and the crank arms.

Following combinations will work as well:

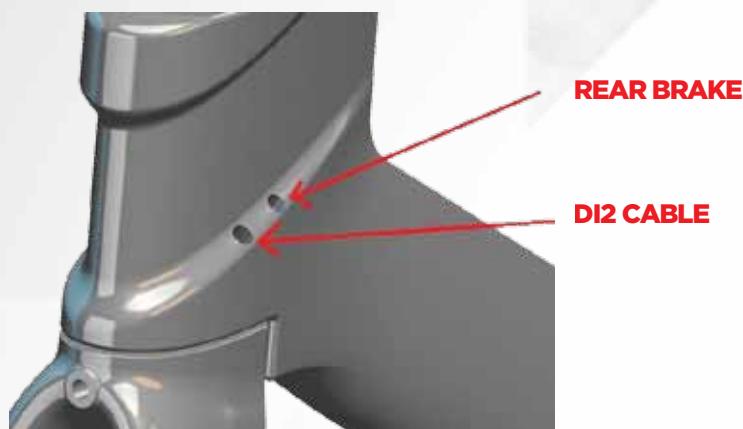

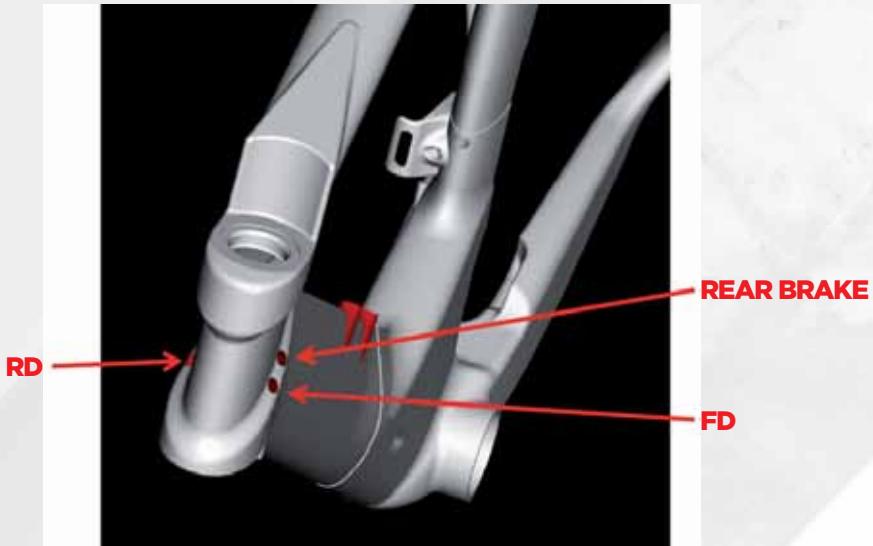

BRAKE	RIM CLEARANCE	CRANK	FIT
BR7800	27 MM	FC 7800	BEST FIT
BR7800	27 MM	FC 7900	BEST FIT
BR7800	27 MM	SRAM RED	BEST FIT
BR 7900	27 MM	FC 7800	NO WILL TOUCH ON CRANK
BR 7900	27 MM	FC 7900	NO WILL TOUCH ON CRANK
BR 7900	27 MM	SRAM RED	BEST FIT

BR 6700	27 MM	FC 7900	NO WILL TOUCH ON CRANK
BR 6700	27 MM	SRAM RED	2 ND BEST FIT SHOULD BE AVOIDED
BR 6600			NO WILL TOUCH ON FRAME
BR 5600			NO WILL TOUCH ON FRAME
BR 5700			NO WILL TOUCH ON FRAME

# PLASMA 3

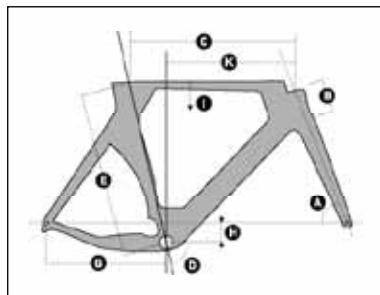

## Cable routing on Plasma 3

Cable routing on Plasma Premium and Plasma Premium Di2 will be very similar in MY13. The cable entry on both models will be on the side of the headtube, three holes for the mechanical shifting and two for Di2.

# 24 E-BIKES (E-ASPECT/ E-SPORTSTER)

SCOTT SUMMER 2013  
 TECH WORKSHOP

## E-ASPECT/E-SPORTSTER

In MY 2012 Scott changed the names of the Pedelecs and calls them E-Sportster

Pedelec means a maximum speed of 25km/h with engine support and it needs always pedaling power from the rider to get the engine support.

In addition we added the E-Aspect 900 as a mountain bike option of the Pedelecs.

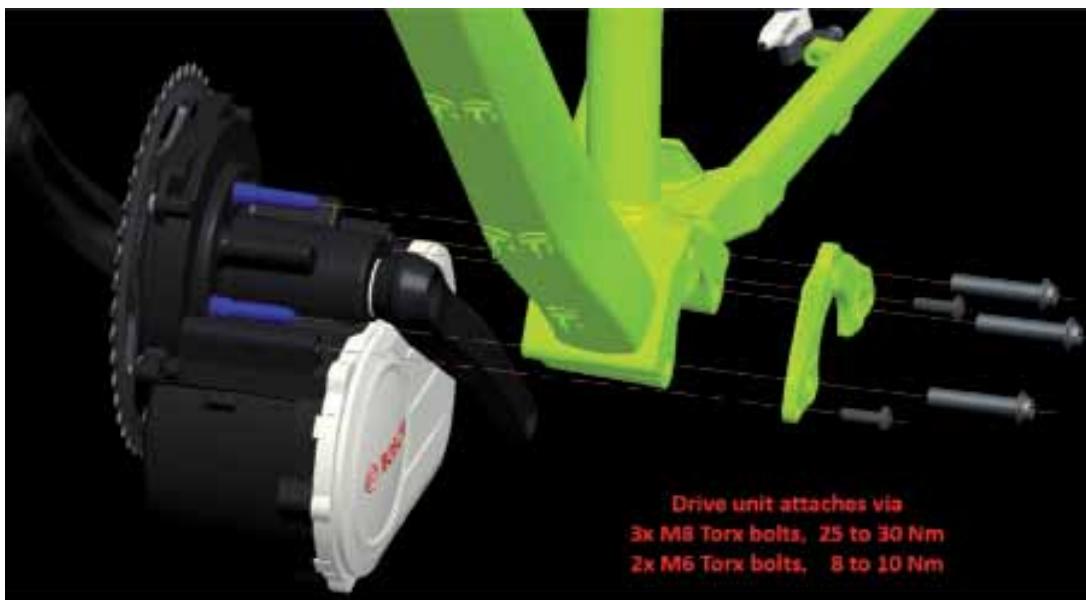

This bike is an Aspect 900 bike from its geometry but uses the same Bosch System we use on E-Venture.

Scott is using the Bosch System for the drivetrain and power supply.  
Please refer to details on those parts to the documents provided by Bosch in the Tech Meeting.

Also the complete service and warranty support on all Bosch related parts is made by a Bosch Service Center. You will find more details and contacts on this in the documents of Bosch in this Tech Book.

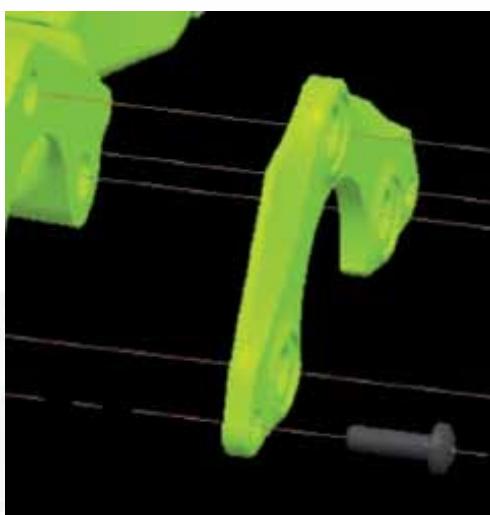

## E-ASPECT/E-SPORTSTER

Please note that the drive unit is mounted on the frame with 5 bolts as shown below. Pls note that it is mandatory to use always new bolts after loosening them once for safety reason and pls respect the maximum tightening torque as shown in the drawing below.

The 5 bolts are available at the Bosch Service Center as they are seen as a part of the engine.

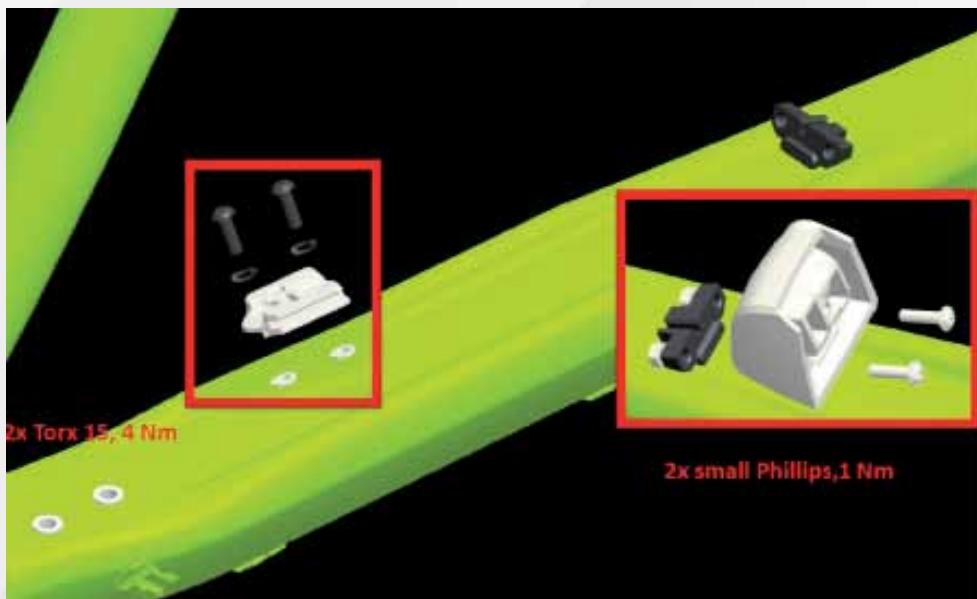

If you need the alloy plate between the bolt heads and the frame port pls contact Scott directly by mail as we have some of those plates in the different colors available in our office.

In case you need after a warranty exchange at the Bosch Service Center a Scott decal again for a battery please contact Scott. Scott will have those stickers available.

## E-ASPECT/E-SPORTSTER

The mounting parts of the battery are also made by Bosch and can be ordered at Bosch Service Centers.

The Speed Sensor Mounting Kit is available at Scott with article number 220693 as this is a Scott specific part

The HMI which is fixed on the handlebar is distributed and serviced by the Bosch Service Centers.

# E-ASPECT/E-SPORTSTER

For the crankset Scott can offer following parts:

Item	Description
<b>220690</b>	Crankset E-SUB/Sportster 2011 170mm 170
<b>220691</b>	Crankset E-SUB/Sportster 2011 175mm 175
<b>220692</b>	Chainring/Chainguard E-SUB/Sportster 11 44T 1 size

This crankset fits also for MY 13 models of E-Venture and E-Aspect 29.

**Important:**

**Please note that those parts are special made for Scott/Bosch and that you cannot use other crank-sets on those bikes.**

The lock system for the battery is available from Axa or Abus.  
Bosch will offer more details on this in the Bosch specific part of the workshop.

# 26 GATES BELT DRIVE SYSTEM

SCOTT SUMMER 2013  
 TECH WORKSHOP

# GATES ANTRIEB

In the collection 2013 at the SUB 10 Bike we use the Gates Carbon Belt Drive. It offers long lifetime and maintenance freedom.

Sales Arguments:  
Lightweight, clean, efficient, quiet

## Please Note

Do not the following things if you have to change a Carbon Belt:

For further Information: please see <http://manual.carbondrive.net>

## SPARE PARTS IN B2B

Item	Description
<b>224416</b>	Gates sprocket 24T Nsize
<b>224417</b>	Gates belt 118T Nsize
<b>224418</b>	Gates chain ring 46T Nsize

To adjust the tension from the belt you have to turn the eccentric at the BB a bit to the front.

For the correct belt tension you can download an App at the Apple App Store which will show you the correct tension via the Microphone.

# 29 CYCLOCROSS

SCOTT SUMMER 2013  
TECH WORKSHOP

# CYCLOCROSS

Cyclocross addict cx shows in 2013 an internal brake cable routing of the rear brake inside the toptube.

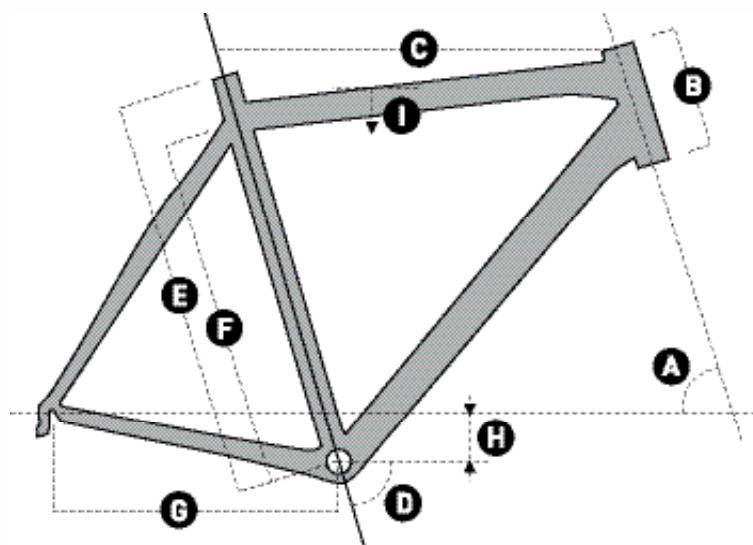

Geometry and other features remain unchanged.

With this cable routing the frame is easier to carry on the shoulder and the brake cable needs less maintenance.

# CYCLOCROSS

# 32 CARBON FIBRE REPAIR INFO

SCOTT SUMMER 2013  
 TECH WORKSHOP

# CARBON FIBRE REPAIR INFO

In case a customer requires a new dropout for a MY 04-09 CR1 or Scale. Or a new BB insert for a CR1 of MY 04-09, Spark or Addict and does not wish to buy a new frame we can offer the following addresses of companies that can repair carbon frames with this kind of damage through their own accounts.

Please note that Scott cannot take any direct liability on repair work done by these companies.

Frames which have suffered from an impact, crash or traffic accident are not recommended to be used or to be repaired, as invisible damages in the fibres can result later without any "pre-warning" from a crack in the tube or another part of the frame.

The following companies can offer repair work on carbon frames using original Scott parts:

## MAW Mariotto Art Works

# CARBON FIBRE REPAIR INFO

**Please note that some of the companies have special requests regarding shipments of the frames and also preparation of the frames.**

**Details on this can be found in the end of this chapter.**

**When in doubt, please contact them before you ship the goods to have a efficient and economic handling of the repair.**

We will work on offering you more info and details on more companies that will be able to help you in your country directly.

Please feel free to offer also from your side more details to us concerning repair companies in your countries.

In case of a crash or accident it could be helpful to give a carbon frame to an expert to get a detailed report if the frame is still safe to be used or not.

In Germany the company of Dipl. Ing. Dirk Zedler is offering this kind of services and expertises.

## **Ingenieur-und Sachverständigenbüro Zedler**

Teinacher Str. 51  
71634 Ludwigsburg  
Germany

<http://www.zedler.de>

Please feel free to offer also from your side more details to us concerning this kind of companies/institutes in your countries.

# **33** ONLINE BIKE REGISTRATION AT SCOTT WEBSITE

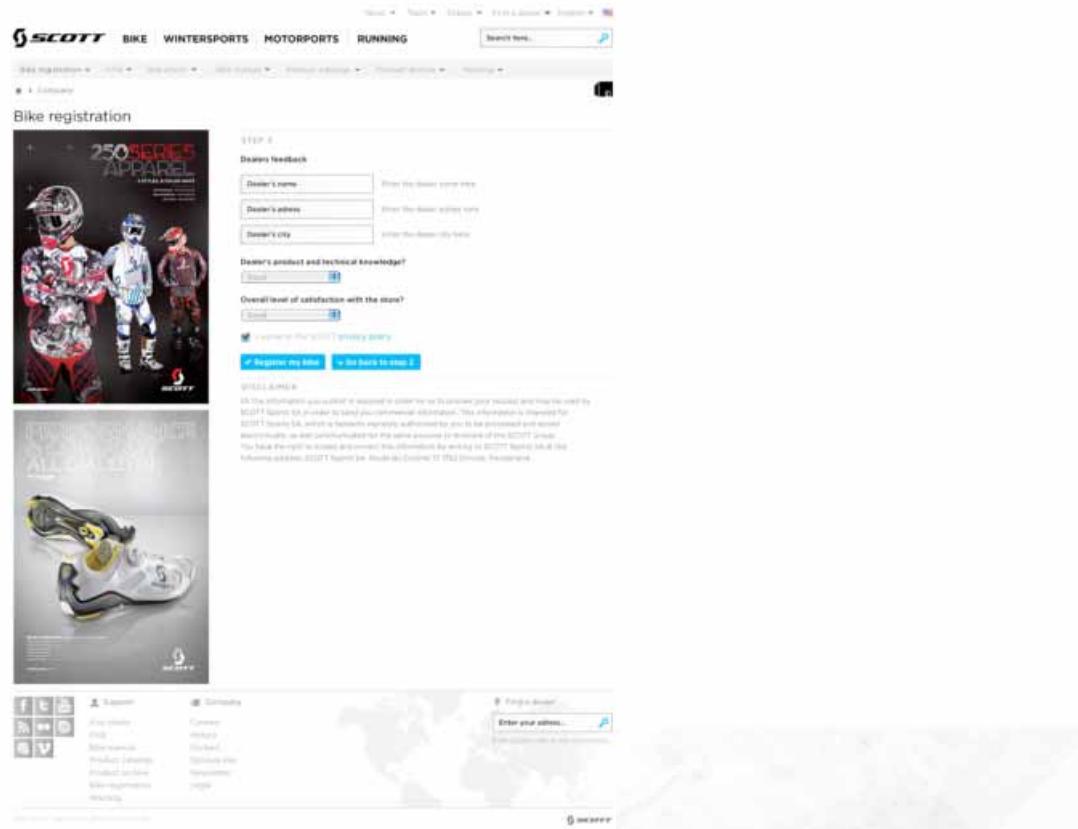

# ONLINE BIKE REGISTRATION AT SCOTT WEBSITE

For 2013 Scott customers can register their bike online on the Scott website.

The screenshot shows the 'Bike registration' page. At the top, there's a navigation bar with links for Home, Team, Editions, Press & Media, and Contact, along with a search bar. Below the navigation is a banner for '250 SERIES APPAREL'. The main form is titled 'STEP 1' and 'Contact information'. It includes fields for First name, Last name, E-mail, City, Phone number, Country (set to United States), Gender (Male or Female selected), and Birthdate. There's also a checkbox for 'I'd like to receive e-mail from you' and a 'DISCLAIMER' section. The bottom of the page features social media links and a footer with links for Support, Contact, and Product categories like Race cycling, MTB, Road, Track, Mountain Bike, Roadster, Recreational, and Triathlon. A map with a 'Find a dealer' button is also present.

This screenshot shows the continuation of the 'Bike registration' process. The top part of the page is identical to the previous screenshot. The main form is now titled 'STEP 2' and 'Bike information'. It asks for the Serial number (entered as '1234567890'), which is highlighted in green, and the Bike category (set to 'Giant'). It also includes fields for Date of purchase (set to '2013-01-01'), Rating (set to 'Excellent'), and another checkbox for 'I'd like to receive e-mail from you'. Below the form is a 'DISCLAIMER' section. The bottom of the page has the same social media links and footer as the first screenshot.

# ONLINE BIKE REGISTRATION AT SCOTT WEBSITE

In case a customer cannot find anymore the receipt of purchase Scott Intl. (and its branches) can check in this database if the comments and info of the customer are true.

Beside this Scott can track back single serial numbers to the owners in case of a quality problem.

Please encourage your customers to register online but please also note that the sales validation via this system should be an exemption, in normal way the customer must be able to show his shop sales receipt.

# **34** WARRANTY CLAIMS OF BIKES OF MODEL YEAR 2008 OR OLDER

SCOTT SUMMER 2013  
 TECH WORKSHOP

# **WARRANTY CLAIMS OF BIKES OF MODEL YEAR 2008 OR OLDER**

Please note that we will not replace frames/bikes older than model year 2008, as the warranty period of these bikes is over, at least for one year.

In case you want to claim bikes older than model year 2008 it is obligatory to give a copy of the consumer's bill of purchase to Scott together with the claim form to Scott to verify your claim.

Without this bill of purchase of the consumer we will reject the claim.

Starting from 2007 Scott offered the 3+2 policy but Scott reserves the right to ask for proof of annual service job done in case claims of those bikes are uploaded on the Scott B2B warranty system.

The chart displays the warranty periods for different SCOTT bike models. The columns represent years 1 through 5. The rows list models: SCOTT Bikes (Year 1), Gambler, Voltage FR, Volt-X (Year 2), and a row for 'Regular Warranty Period' and 'Option for prolongation according to maintenance intervals shown in manuals attached to bikes'.

	Year 1	Year 2	Year 3	Year 4	Year 5
SCOTT Bikes					
Gambler, Voltage FR, Volt-X					
Regular Warranty Period					
Option for prolongation according to maintenance intervals shown in manuals attached to bikes					

Important:

Please kindly note that Gambler, Voltage FR and Volt-X are excluded from this policy and have a warranty period of 2 years.

# **35** CORRECT ON-LINE B2B IMAGES AND DIRECT EMAIL ENQUIRIES

## CORRECT ON-LINE B2B IMAGES AND DIRECT EMAIL ENQUIRIES

When up loading images to B2B or on direct emails please check and make sure the images are in focus and legible, we cannot help with the assessment of an issue or problem if the evidence presented is not of a required standard.

With all direct email issues and problems that you wish to enquire about please always attach the frame number of the bike, as this information will help us to track back to the origin of the problem. Below are some images that we cannot use due to the quality:

**The Classic,** background in focus, all the important information not in focus.

Frame Number is somewhere on this image?

# CORRECT ON-LINE B2B IMAGES AND DIRECT EMAIL ENQUIRIES

Also, when uploading claims for Helmets if possible please attach an image of the serial number as we can add this number into the claim when we process it.

If you have issues with Bottom Bracket Dimensions, Dropout Alignment please measure the following along with the overall alignment of the frame, if this data is collected first the assessment of the problem will be a lot faster. These tools can be used on aluminium and carbon frames. A full list of recommended tools will be covered in a separate chapter.

# CORRECT ON-LINE B2B IMAGES AND DIRECT EMAIL ENQUIRIES

Below is a good example of the level we are looking for, the following claim information is excellent:

# **36** ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, HELMETS, SHOES AND PROTECTION WEAR

SCOTT SUMMER 2013  
 TECH WORKSHOP

# ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, BIKE SHOES, HELMETS, BODY PROTECTION

3 years ago we started our B2B online warranty system for bike frames and Scott forks on our B2B page.

We did some updates and improvements, so please refer to following pages showing the new steps.

To log-in you need your customer number and the password you use also for your online orders of your company when shopping online at Scott.

Please follow step-by-step as shown on screen shots below:

Please note that without pictures it is not possible to send the claim.

Picture 1 + 2 must show the damage from different views, picture 3 the serial number of the frame (or of the swingarm part in case those parts have their own serial number) and picture 4 must show a scan or picture of the copy of bill of purchase of the customer.

In case those docs are not provided we have to reject the claim respectively the warranty system will not enable you to send the file to Scott for replacement arrangement.

The old copy-paper versions of warranty claim forms are not needed anymore and we only can accept claims provided by B2B system.

**With the claim number you will receive after finalizing your claim on B2B you can check in the regular B2B system on the progress of your claim and you can see the replacement part you will receive including shipment details in the same way like on a regular order on B2B.**

We hope this system will speed-up our service and facilitate communications on service and warranty as you have 24-7 access to all this data.

**Important:**

**Please do not use this system for accessories, bike parts (e.g. swingarm repair kits etc.) or other bike parts.**

**For all small parts mentioned above pls keep the “old” claim process by direct e-mail to the persons in charge of you at Scott.**

In addition we created the same system of warranty procedure also for bike shoes, helmets and body protection.

Pls follow the system here as well in the same way, just click the related product group to start with as shown on following screenshot and enter the requested data respectively upload the requested pictures accordingly.

# ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, BIKE SHOES, HELMETS, BODY PROTECTION

Please note the following Warranty Sub Sections for each Category within the B2B System.

Only enter items listed below into B2B.

Bike:

Bike, Helmets, Shoes, Protection.

MotorSport:

Helmets, Protection, Neckbrace, Boots, Apparel On-Road, Apparel MX, Apparel Snowmobile.

Running:

Shoes

Wintersport:

Skis, Helmets, Protection.

## Distributors Only:

All other items for each category please use the Parts Claims List / Hard Goods Winter / MX Goggle-Sunglasses Excel Sheets.

## Syncros

- For Catalogue Syncros Parts Only (not including accessories) use the Syncros B2B
- For Catalogue Syncros Accessories use the Syncros Excel Claims Sheet.
- For Syncros OEM parts (on complete bikes i.e FL2.0 Stems , FL2.5 handlebars & Seatpost, XR2.5 Saddles etc) use the Syncros Excel Claims Sheet.

## Scott Subs:

Subs please use QM01 for Goggles, Gloves & Ski Poles as before.

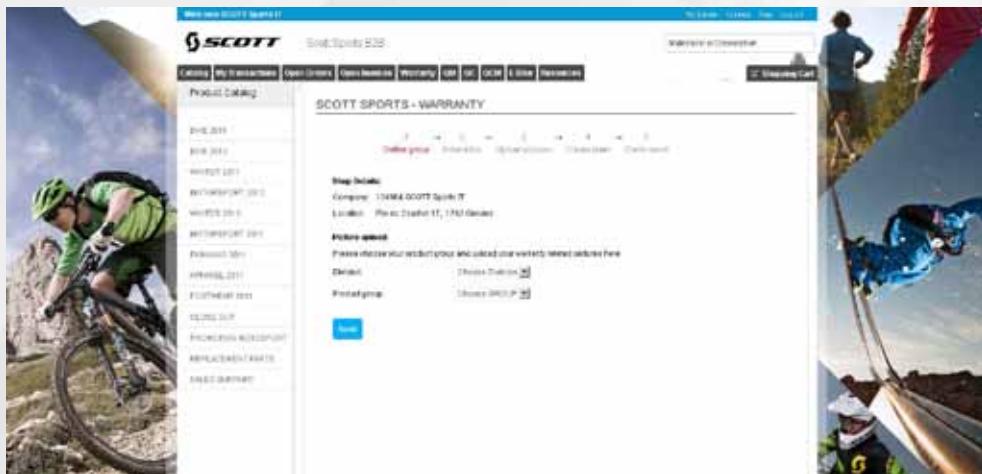

**Please refer to chapter 48 „Syncros Online Warranty System“ for additional infos on the Syncros B2B system**

- For Catalogue Syncros Parts only (not including accessories) use the Syncros B2B & BOB
- For accessories and OEM parts please use ZKL1, no need to use QM01 or Syncros Excel Claims Sheet

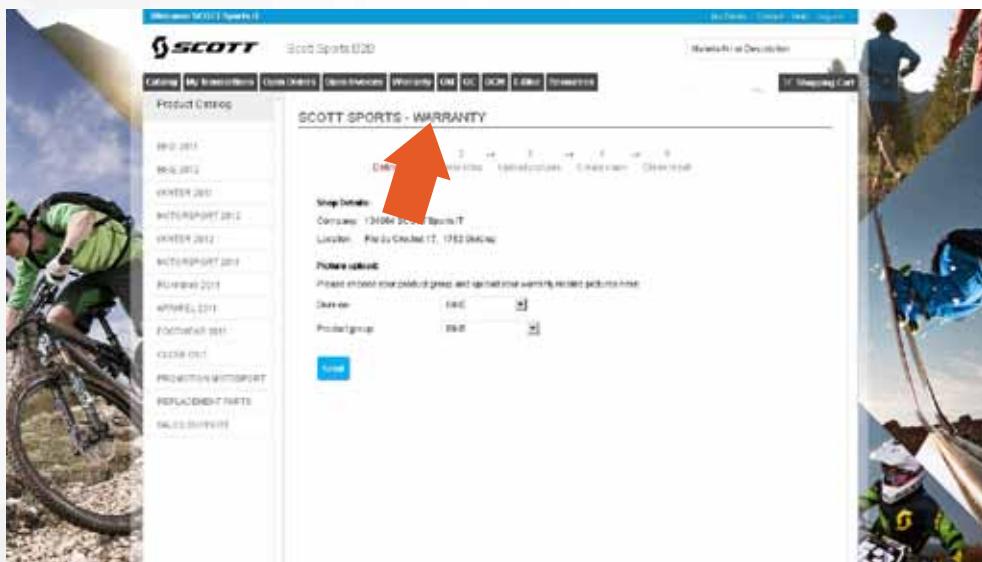

# ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, BIKE SHOES, HELMETS, BODY PROTECTION

## BIKE FRAMES

1. Please visit <https://shop.scott-sports.com/index.html> and follow then the steps as shown on the following screenshots:

2. After the successful login to the SCOTT SPORTS B2B Website you can reach the form to enter your warranty request by the link in the main navigation on the top.

# ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, BIKE SHOES, HELMETS, BODY PROTECTION

Then the following form where you are able to enter your data is opened inside of the B2B context. To add a new warranty request you have to fill all the fields. At first you have to select your bike frame or part by choosing from the drop down menus and by putting in the bike's serial number. Then you have to locate and describe the damage. In the last step you are provided with 4 upload buttons where you have to upload two pictures of the damage, one of the serial number and one of the invoice. We only accept files from the type jpg, pdf or doc. To send your data just click the button 'Send'.

The screenshot shows the 'SCOTT SPORTS - WARRANTY' page. On the left, there's a sidebar with a menu for 'PRODUCTS & SERVICES' containing items like 'BIKE 2011', 'BIKE 2012', etc., and sections for 'PROTECTOR', 'BIKE SHOES', 'Helmets', and 'BODY PROTECTION'. The main area has tabs for 'Cycling', 'My Dashboard', 'Customer Support', 'TECHNICAL', 'BIKE PARTS', 'WARRANTY', 'CAT', 'OF', 'CCC', 'Ergo', and 'Warranty'. Below these tabs, there's a section titled 'Bike details' with fields for 'Year of model' (2010), 'Product description' (Bike Protect 2.0 Frame 2011), 'Size' (L), and 'Serial number' (10010422). There's also a 'Damage location' dropdown set to 'Top tube/bottom' and a 'Damage type' dropdown set to 'Crack/break'. Two small images of a bicycle frame are shown under 'Damage location'. At the bottom right of the form, there's a large blue 'Send' button. The background features a blurred image of a cyclist.

This screenshot shows the continuation of the warranty application. The 'WARRANTY' tab is still active. The 'Upload' section asks for four documents: 'Picture of frame', 'Picture of serial no.', 'Picture of helmet', and 'Picture of invoice'. Each field has a 'Select file...' button. Below the upload section, a note says 'Please remember to upload at least two images of the damage and one of the serial directly'. At the bottom right, there's a blue 'Send' button. The background image of the cyclist is partially visible.

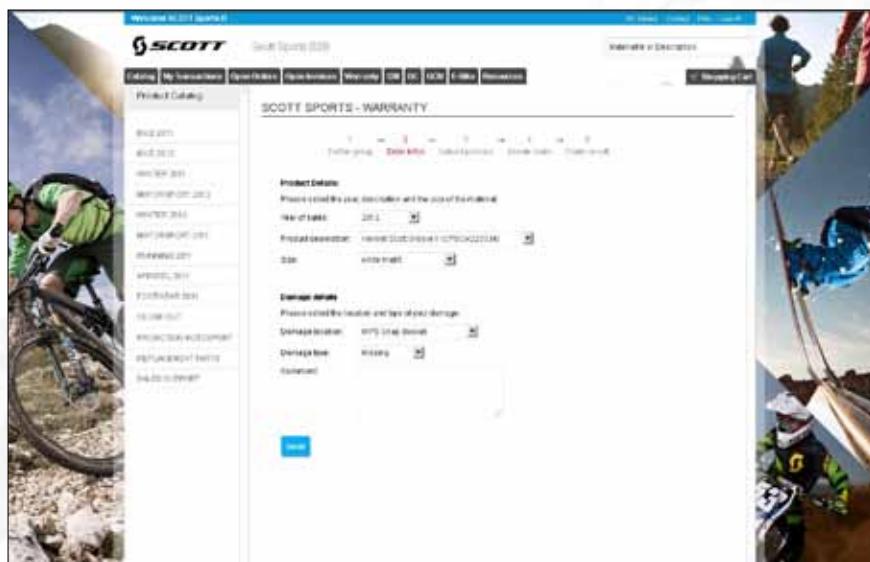

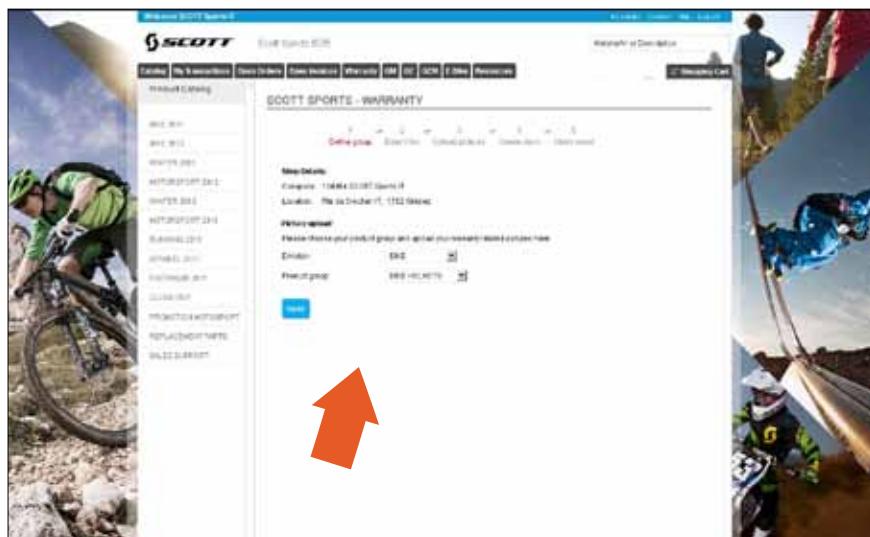

# **ONLINE WARRANTY PROGRAM FOR BIKE FRAMES, BIKE SHOES, HELMETS, BODY PROTECTION**

4. After entering the data and sending it to the next screen you can check your inputs. On this screen you are able to add an alternative email where the data is also sent to. Furthermore you there is an input field where you are able to add your reference. Before you are able to create the claim you have to agree to the terms by clicking the checkbox. Then the claim can be created by the Button „create claim“.

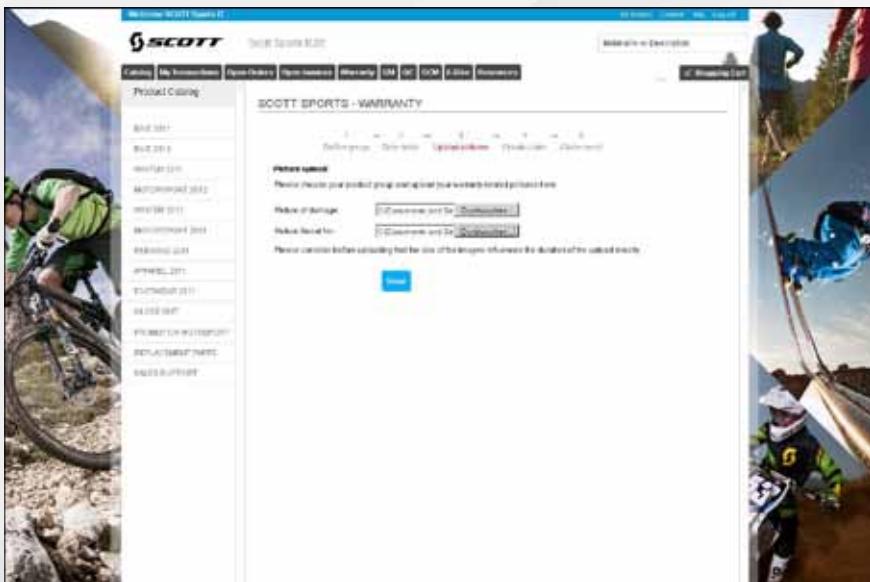

5. From now on the data is stored in our system and will be processed by a service employee.

# **37** AGREEMENT WITH SUPPLIERS ABOUT DIRECT WARRANTY SUPPORT TO DEALERS AND NATIONAL SCOTT DISTRIBUTORS

# **AGREEMENT WITH SUPPLIERS ABOUT DIRECT WARRANTY SUPPORT TO DEALERS/NATIONAL SCOTT DISTRIBUTORS**

Please note that we have an agreement with companies/brands named below for worldwide support on warranties of OE parts spec'd by Scott:

- Shimano
- Campagnolo
- SRAM
- DT-Swiss
- Ritchey
- Mavic
- Continental Tires
- Schwalbe Tires
- SR/SunTour
- Rock Shox (SRAM)
- Fox Racing Shox
- E-13
- Syncros
- RST
- Zipp
- Profile

The national distributor of the defective product will help you or your dealer to get warranty support in your country.

Therefore please contact him directly and add to the cleaned defective part the bill of purchase of the bike the part was mounted to help him to work efficient on your claim.

In case you get no help please do not hesitate to contact Scott to get help from our side.

We will try to push from our side then the producer directly to get help for you soon. To push we need detailed information about the part, a digital picture and name of the contact person at the distributor who refused to support you.

**38** REPLACEABLE  
DROP OUTS  
SINCE 1995

## REPLACEABLE DROP OUTS

In the past years we had several different replaceable drop-out hangers and want to give you below info about all different shapes and models we had.

This might help you to make directly an order at the Scott trading dept. in case you get a broken drop out hanger as a sample from one of your customers to get a replacement for him.

 TECH WORKSHOP

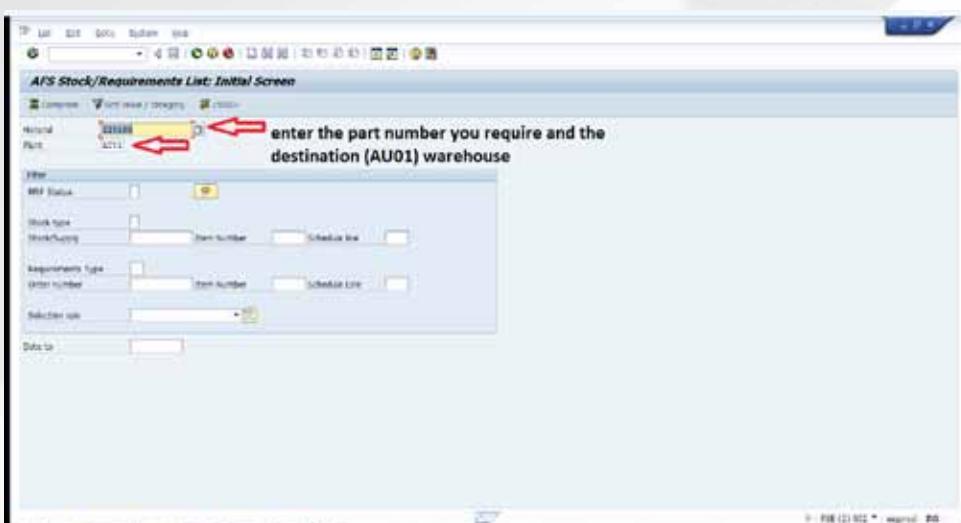

# HELPFUL SAP TIPS FOR SCOTT SUBS ONLY

To find stock items for spare parts or frameset etc please try AFS/MDO4 as your search engine within SAP. (You may need to get an authorization to access this transaction)

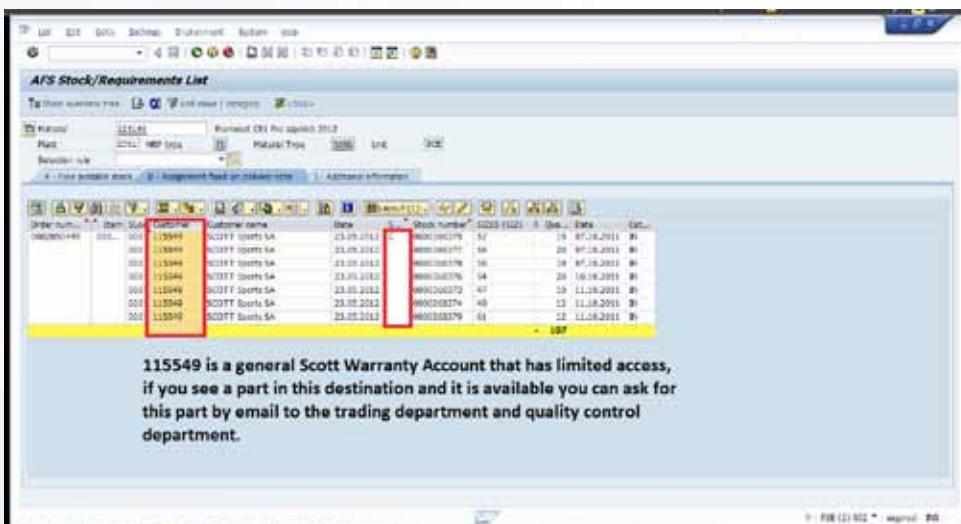

Please follow the screen images below to navigate your way through the system.

Screen 1

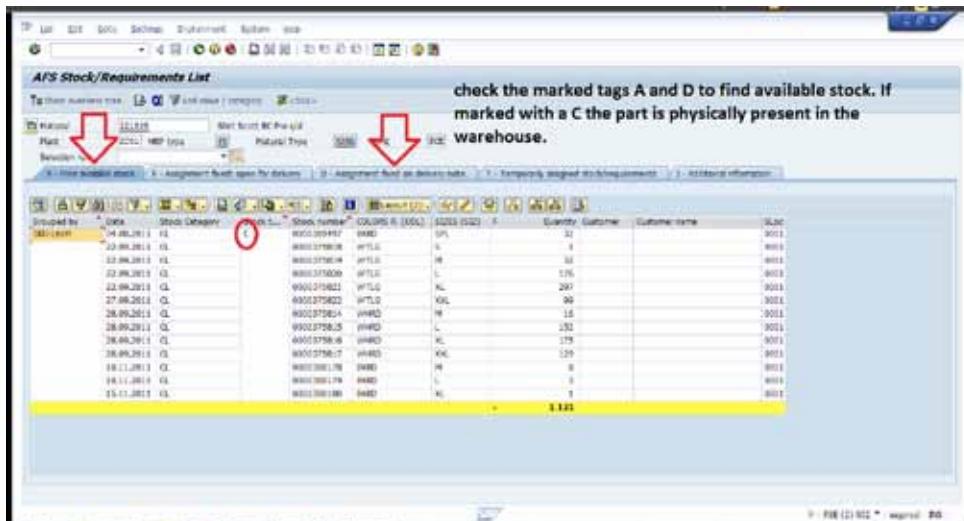

Screen 2

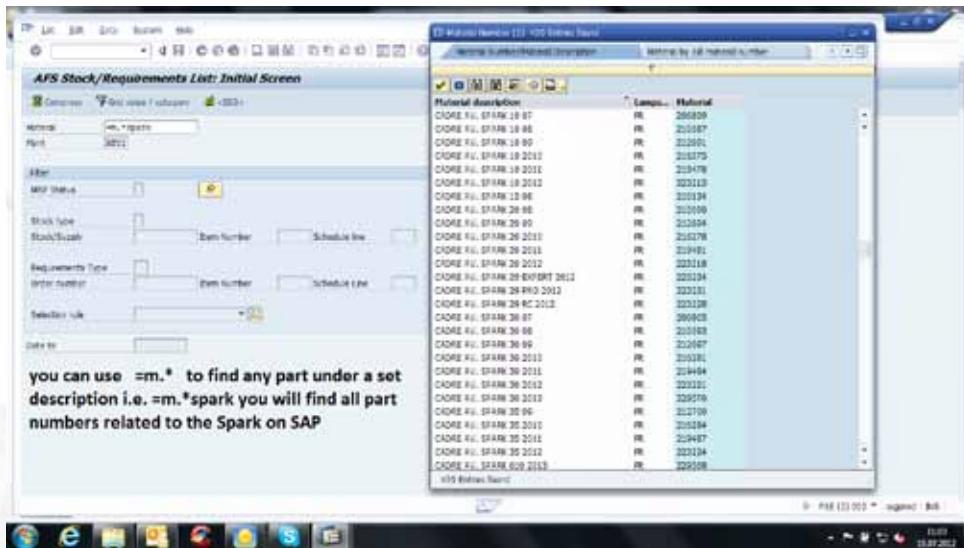

Screen 3

# HELPFUL SAP TIPS FOR SCOTT SUBS ONLY

Screen 4

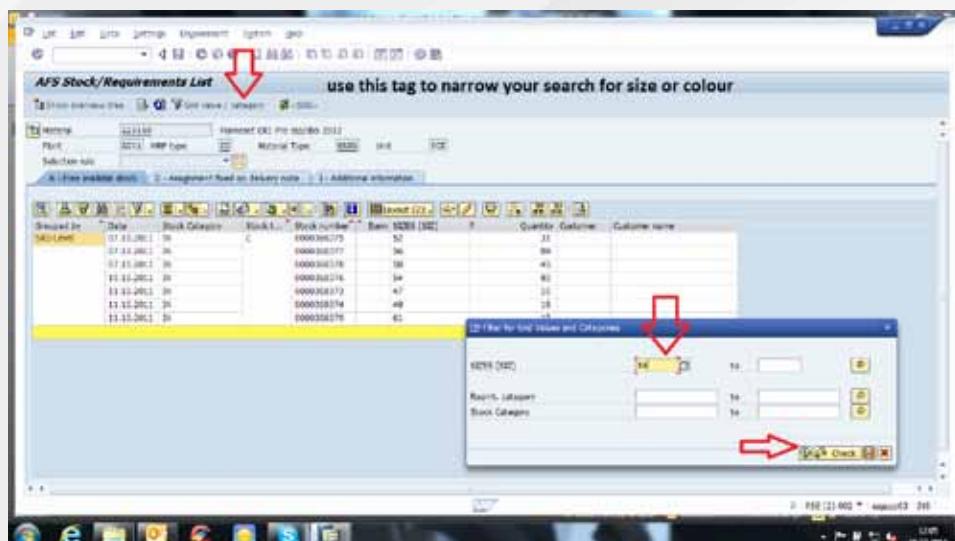

If you need to search for a part number which you do not know please try the following either in AFS/MD04 or AFS/ATPS. Once you have followed the screen below, just double click the code you need to see availability.

Screen 5

# HELPFUL SAP TIPS FOR SCOTT SUBS ONLY

If you use AFS/MD04 for your search engine as described above you can then narrow your selection once more by using the tag indicated on the screen print below.

Screen 6

If you need to find an old order or a part you have send please try VA05 as your search engine.

Please follow the below screen print and enter the details to find your order.

Screen 7

# 40 REPLACEMENT PARTS

SCOTT SUMMER 2013  
 TECH WORKSHOP

# REPLACEMENT PARTS

As every year we have on the following pages a list of all articles new for 2012.

Also pls find parts numbers of MY 2010, 2009, 2008, 2007 and MY 2006.

For parts numbers from 2005 and older pls use the specific workshop folder of the different model years or in case you cannot find an article in those lists pls feel free to contact

Patrick.Bochud@scott-sports.com  
Holger.Klinter@scott-sports.com

for further details.

In addition we can offer you on our B2B homepage a direct view on spare parts linked to each bike.

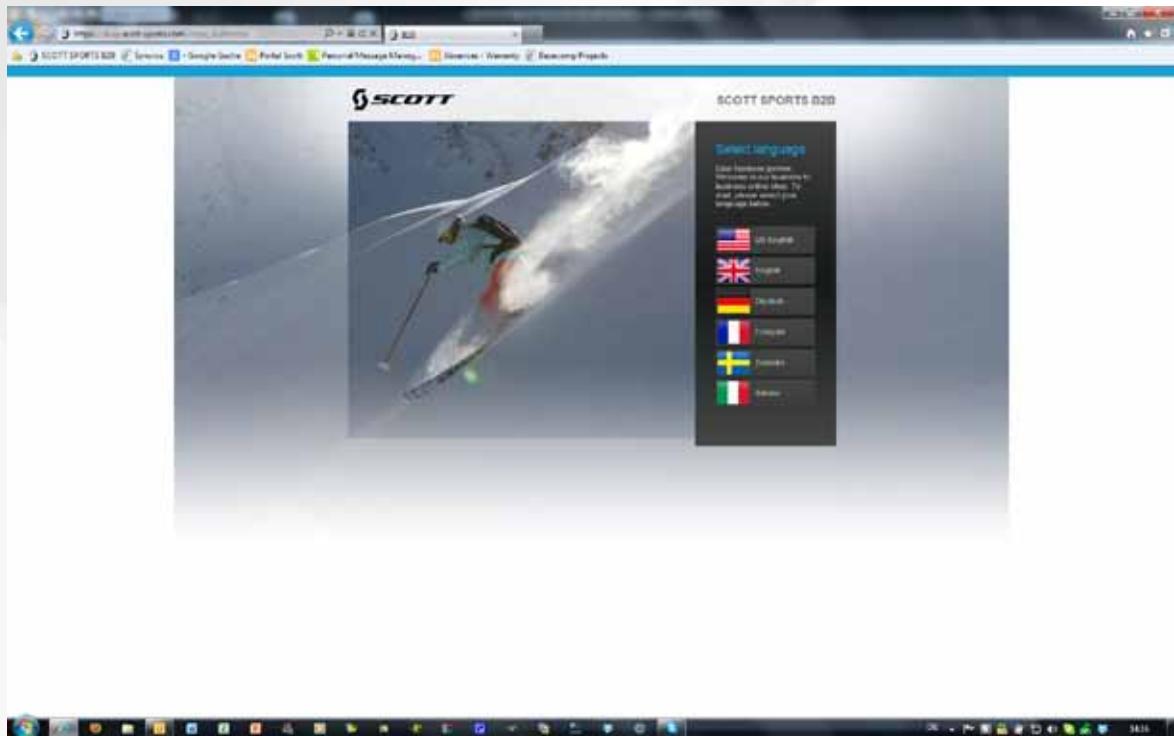

Please follow the instructions below to get your look on parts that match to certain bikes.

## ACCESS

Access through **HTTP://SHOP.SCOTT-SPORTS.COM**  
with your customer number and password.

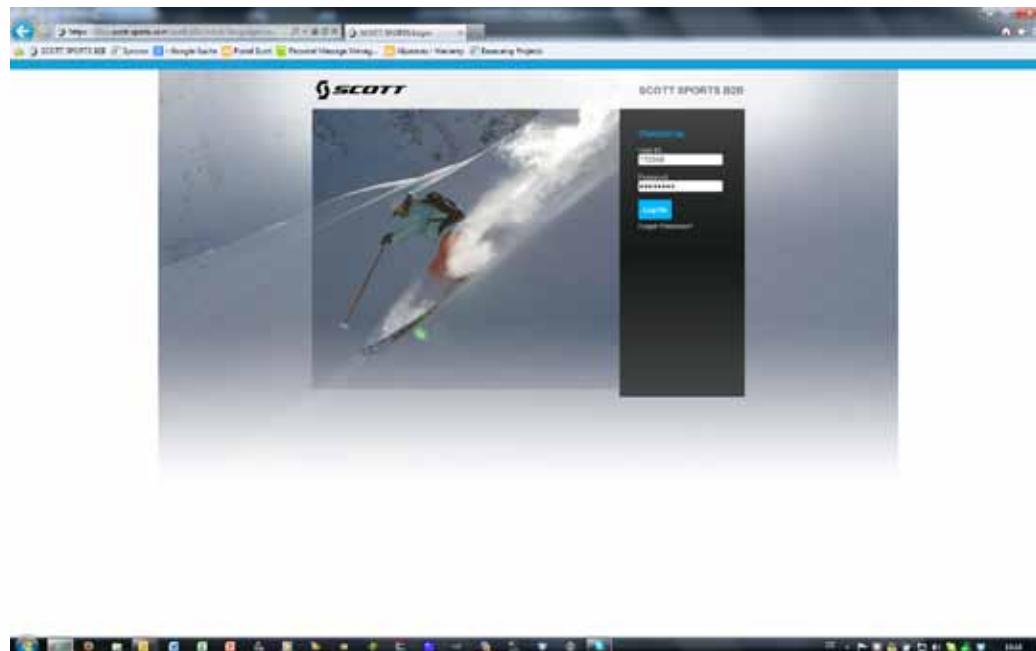

## ORDER PROCESS

Browse the catalog to find the parts you would like to order

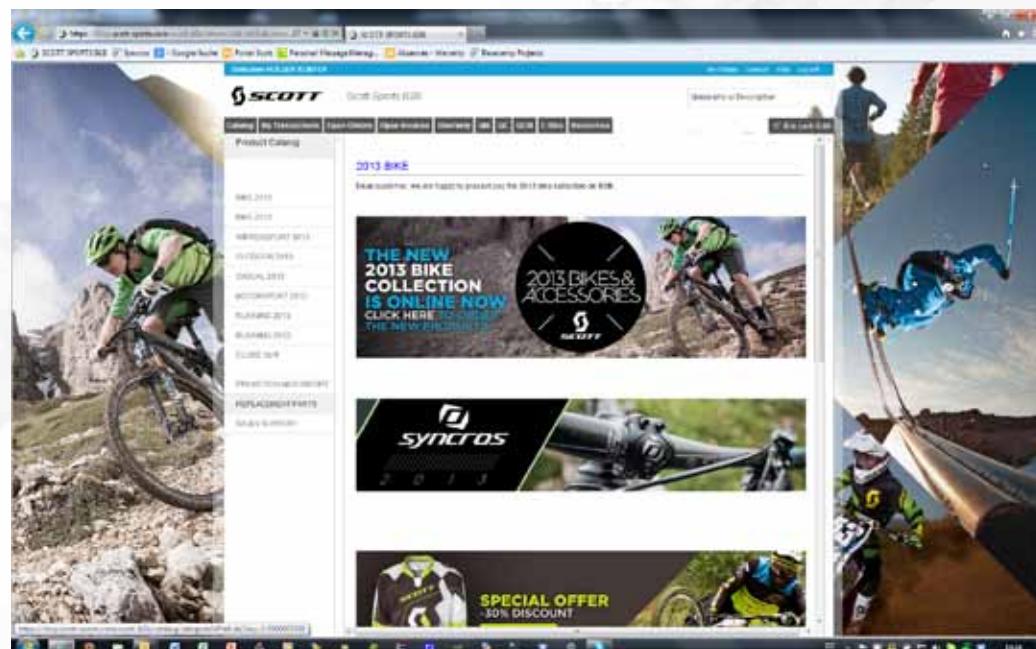

## REPLACEMENT PARTS

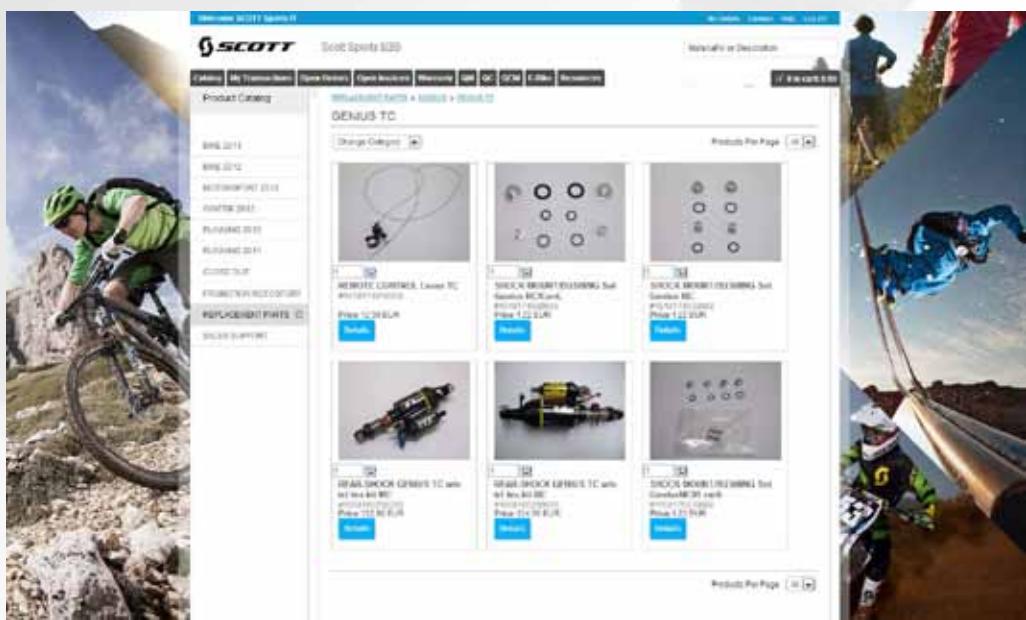

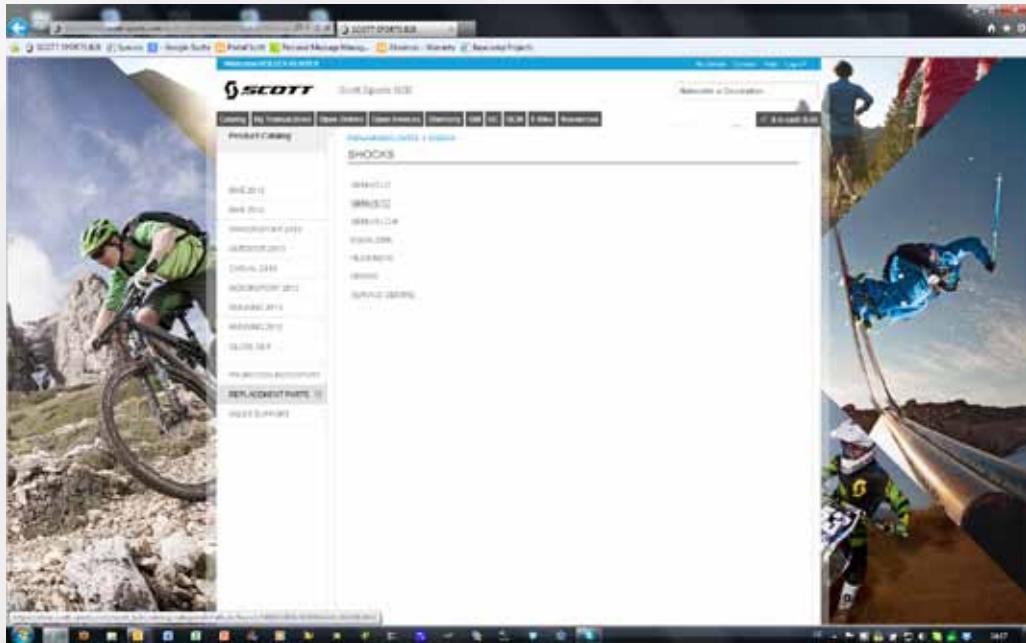

When you have selected a category from the catalog you will see the related products and the availability in the main frame of the site. Green color means available right now, yellow will be in stock soon and red is sold out. To place an order you would have to click on the picture or the button 'Details'. Inside of the detail view there is the date of the next delivery to our stock if it is not available right now.

On the detail view of the replacement part you are able to see the price and you are able to enter the desired quantity. By pressing the button 'Buy' the product will be stored in the shopping basket from where you are able to place your order.

## SHOE REPLACEMENT PARTS

### BOA LACE SYSTEM REPLACEMENT PARTS MODEL B REEL AND LACE REPLACEMENT KITS FOR SHOES 2005-2006

REEL / LACE KIT  
15.5200.598.0.000

#### Changing instruction

### III LACE/REEL CHANGING INSTRUCTIONS:

**IMPORTANT:** Change one shoelace at a time and use the other shoe as a guide.

- Remove the screw, knob and spring using the Boa tool.
- Pull spool out, cut off knots and remove old lace.
- Using SHARP scissors, cut a new lace the same length as the old.  
**NOTE:** Some new laces may not require cutting. For a complete list of lengths, go to [www.boatechnology.com](http://www.boatechnology.com)
- Insert lace into holes and out through center of housing.  
**Replace the lace exactly as it was before.**
- Insert lace into bottom holes of spool. (Use new spool if you are installing a new reel).  
**IMPORTANT:** Once the knot is seated, trim lace flush with top of the spool.
- Pull on laces to tighten knots and seat spool into housing.  
**IMPORTANT:** Tuck lace ends into the spool using Boa tool.
- Reinstall spring, knob and screw. Use new parts if installing a new reel.  
**NOTE:** Rotate the knob a few times to ensure alignment. Then tighten the screw FIRMLY.

# 44 LEGAL INFORMATION

SCOTT SUMMER 2013  
 TECH WORKSHOP

# LEGAL INFORMATION

## PROCEDURE IN PRODUCT LIABILITY CASES

### A. PRODUCT LIABILITY

#### 1. Definition

- Product defect (a product is defective if it is not as safe as it can be generally expected at the moment of the first placing on the market, e.g. a fault in construction, a fault in production etc.)
- Bodily injury of the consumer caused by the product defect, and/or
- Property damages of other things than the defective product

#### 2. Procedure / Check list

**JUST AND SOLELY the SCOTT Headquarter handles product liability cases.**

Therefore, please follow this check list. In case you do not follow this check list SCOTT might be sued and not be able to adequately defend its position which might create unjustified prejudices which might have detrimental consequences both for the trademark image of SCOTT and the business relation between SCOTT and you. Furthermore, in case you do not follow this procedure, SCOTT reserves the right to ask you to reimburse all costs of the concerned product liability case.

- Provide address and phone number of claimant
- Provide memo including the following data
  - What happened?
  - Who?
  - When did it happen?
  - Where?
  - Why?
  - What is the general appearance of the product?
  - Detailed product information, e.g. frame number, model etc.
- Provide sales slip
- Provide confirmations of periodical maintenances and services
- Provide a short summary of utilization of product since purchase
- Provide the complete written correspondence of the claimant, particularly medical certificates, technical expertises etc.
- Provide pin sharp photos of the defective product from all sides

# LEGAL INFORMATION

- In case the claimant does not hand over the defective product for examination, provide name and address of location where the product may be examined by us
- Provide all written information in original and translated into English, German or French.
- Store carefully all pieces of evidence, particularly the defective piece, and do not send back to the claimant unless with the explicit prior permission of SCOTT. DO NEVER THROW IT AWAY!

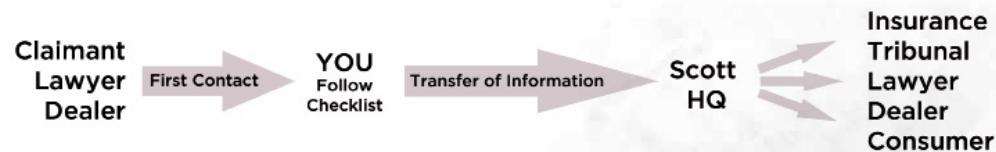

Please send all these information to

Barbara Moigno: +41 26 460 16 80 or [EU.legal@scott-sports.com](mailto:EU.legal@scott-sports.com)  
Audrey Béard-Ravenswaay: +41 26 460 17 06 or [EU.legal@scott-sports.com](mailto:EU.legal@scott-sports.com)  
Holger Klinter: +41 26 460 17 39 or [holger.klinter@scott-sports.com](mailto:holger.klinter@scott-sports.com)  
Patrick Bochud : +41 26 460 16 89 or [patrick.bochud@scott-sports.com](mailto:patrick.bochud@scott-sports.com)  
Fax: +41 26 460 16 00

NO COMMENTS or STATEMENTS vis-à-vis the claimant or the dealer!

As a matter of course act in a customer-friendly manner (active listening / expression  
of sympathy and concern etc.) with the claimant!

Communication with consumers/insurances/lawyers will ONLY be handled by SCOTT Headquarter!

# MANUAL STAR RATCHET HUBS

## Instructions

Please read the entire manual before using the hubs or before carrying out any kind of maintenance work. In this manual, the hubs are shown installed in a complete wheel. Maintenance work should be carried out on complete wheels where possible, as some steps can otherwise not be carried out correctly when using these tools.

This manual is intended for retailers with the appropriate skills and knowledge. It details the principle design features of DT Swiss hubs and also provides instructions as to maintenance and repair work. Please take special care to use only original DT Swiss special tools in order to undertake the work detailed in this manual. In the event of improper servicing of the hubs, DT Swiss LTD. has the right to refuse any warranty.

Due to continual improvements that are made to DT Swiss products, it is possible that the hub(s) you have received differ slightly from the model(s) described in this manual. For the newest version of the service manual or for miscellaneous questions, please consult the official DT Swiss, representative for the country in which you reside or consult our Internet homepage <http://www.dtswiss.com>.

Please give special attention to the following notice which is listed under the title below:

## CAUTION:

In the case of non-compliance with these instructions, the function of the hub will be impaired, which may lead to injuries with serious consequences, and the loss of the product guarantee.

## Maintenance of the hubs

Maintenance of the rear and front hubs wheel must be carried out at least once a year. When used under extreme conditions (heavy rain, mud, transport in the rain etc.) the free-wheel should be serviced more often.

Regular maintenance of the hub helps to ensure a longer life and optimum running performance for years.

In the case of exposure to water under excessive pressure (e.g. high-pressure cleaners), water may penetrate into the hub. This may damage the hub. Do not use any solvents or detergents.

## Important

- Before every use, check the function of your rear wheel hub. Make sure that the free-wheel and engagement connection function impeccably. Should there be any malfunction, the rear wheel hub must not be used. In such a case, the problem must be repaired before use. If you are not in a position to repair the hub, contact your dealer, service center or consult the DT Swiss website [www.dtswiss.com](http://www.dtswiss.com).
- We strongly recommend that you have your wheels built by an experienced specialist. Proper wheel building is the best way to ensure that your wheels will last and be problem-free.
- New hubs have a higher rolling resistance than used hubs, because the grease in the free wheel has not yet been evenly distributed and the seals have not yet been bedded in.
- Radial lacing on DT Swiss hubs is not recommended as it may lead to impermissible deformations on the hub flange. Flange breakage is not covered under the warranty in this case.
- In the case of the Disc Brake version, the original screws must be used for the brake disc.
- Disregarding these instructions will limit the function of the freewheel and can lead to injury or other severe consequences and the loss of the product warranty.

# MANUAL STAR RATCHET HUBS

DT SWISS

## Warranty terms

This Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

DT Swiss, Inc., with registered offices in Grand Junction, Colorado, with registered offices in Grand Junction, Colorado, will repair or replace products that are accepted as being defective at its discretion for a period of 24 months from the date of purchase. In the case a product is substituted for a defective product, the warranty period will not be extended. This Warranty is extended only to the original purchaser of the product.

Any implied warranty with this product shall extend no longer than 24 months from the date of purchase. Some states do not allow limitations on how long an implied warranty lasts, so this limitation may not apply to you.

In order to obtain service under this Warranty, the defective product must be sent, postage pre-paid, to the following address after receiving a return authorization number from technical services (Tel 970-242-9232).

There will be no Warranty service for the following:

- Normal wear and tear of parts subject to wear
  - Incorrect wheel assembly
  - Alteration of product or use of product in combination with other products that do not fit
  - Incorrect maintenance or repair
  - Incorrect use, abuse, misuse, neglect, carelessness, commercial use or use in cycling competitions
  - Flange breakage
  - Delivery and transport damage
- Repair or replacement of defective products is the exclusive and sole remedy available
- DT Swiss Inc. shall not be liable for any indirect, incidental or consequential damages.

These warranty terms are only valid for USA and Canada.

# MANUAL STAR RATCHET HUBS

## Removing the cassette

The cassette should only be dismantled if the hub is completely assembled.

Release the lockring using a freewheel tool.

Loosen the sprockets by lightly tapping it counter-clockwise with the synthetic head hammer.

Remove all the sprockets from the rotor.

Use a file to remove bad notches from the aluminium rotor.

### CAUTION:

The aluminium rotor must be cleaned and inspected. If any cracks or other damage is visible, the components must not be re-used, but must be replaced by a new or a reconditioned rotor.

### NOTE:

Notches on the rotor do not have a negative influence on the functionality of the freewheel

# MANUAL STAR RATCHET HUBS

## RW disassembling the freewheel

Clamp the wheel into the axle holder. Pull the wheel with both hands upwards.

**Caution: Ensure the rotor is not tilted !**

Remove rotor. Remove the star ratchet, spacer and spring from the hub housing. Remove the second star ratchet and the second spring from the rotor.

**If the rotor gets stuck:**

Screw the lockring again onto the rotor.

Put the axle disassembly tool into the rotor.

Unscrew the rotor with the disassembly tool.

# MANUAL STAR RATCHET HUBS

## RW disassembling the ring nut

Clamp the installation cylinder for the ring nut into a vise.

Push the wheel's axle into the cylinder. Spin the wheel firmly in an anti-clockwise direction. The ring nut will be loosened and, at the same time, the hub/rotor seal will also be unscrewed and will fall over the cylinder onto the vise.

Clean the individual parts using a dry cloth.

Thoroughly remove the old grease in the ring nut using a toothbrush if necessary.

### CAUTION:

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must not be used. They must be replaced by original DT Swiss components.

# MANUAL STAR RATCHET HUBS

 **syncros**

 **DT SWISS**

## RW disassembling both ball bearings

Use the synthetic head hammer to tap the axle out of the housing. Remove the axle from the housing.

Slide the adapter and ball bearing off the axle.

Turn the axle around and insert it into the hub housing until the axle collar butts against the ball bearing. Use a synthetic hammer to tap the second ball bearing out.

### CAUTION:

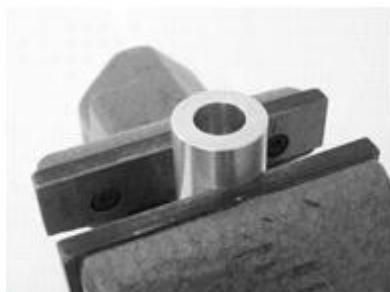

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must not be used. They must be replaced by original DT Swiss components.

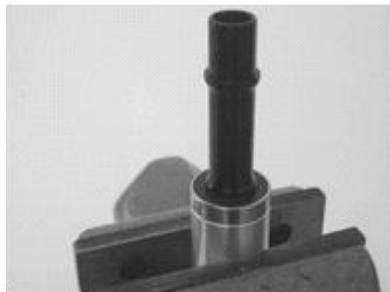

# MANUAL STAR RATCHET HUBS

## RW assembling the right ball bearing

Clamp the short installation cylinder into a vise.

Place the 6902 ball bearing ( $\varnothing 15/28 \times 7$ mm) onto the longer end of the axle and push into the installation cylinder.

Place the wheel's drive side over the axle. Push the second short installation cylinder on the opposite side over the axle. Use the synthetic head hammer to press the ball bearing into place.

# MANUAL STAR RATCHET HUBS

## RW assembling the ring nut

Clamp the installation cylinder for the ring nut into the vise.

Place the ring nut with the recess uppermost over the toothing; then lightly grease the external thread using a commercially available multi-purpose grease. Place the shim ring into the ring nut so that it lays flat.

Insert the axle of the wheel into the clamped fixtures and carefully screw the ring nut into the housing by turning the wheel clockwise.  
**Watch that the housing doesn't scratch at the vise.**

### CAUTION:

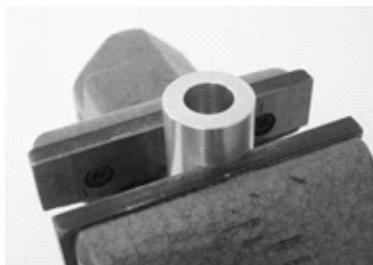

Before installing the ring nut, examine it carefully. If the component is damaged it must be discarded and replaced immediately by an original DT Swiss ring nut.

# MANUAL STAR RATCHET HUBS

## RW installing the seal hub/rotor

Clamp the short installation cylinder into a vise.

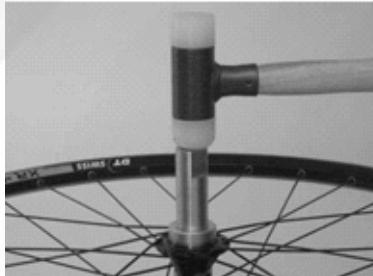

Put the wheel over the installation tool.

Place the seal over the rotor seal installation tool.  
**Ensure that it is placed with the correct orientation.**

Push the rotor seal installation tool with the seal on it over the axle.

Place the long installation cylinder over the axle.  
Press the seal into the housing by tapping it with the synthetic head hammer.

### IMPORTANT:

When installing a new seal, only the right hand ball bearing 6902 ( $\varnothing 15/28 \times 7$ mm) should be in place. The left hand ball bearing must not be pressed in until the seal has been installed !  
If the seal shows signs of wear or damage, it must be replaced immediately.

# MANUAL STAR RATCHET HUBS

## RW installing the left hand bearing

Clamp the installation cylinder for the ring nut into a vise.

Push the drive side of the wheel over the cylinder.

Pull out the axle about 10mm. Place the ball bearing 6902 ( $\varnothing 15/28 \times 7\text{mm}$ ) carefully into the housing.

Place the short installation cylinder over the axle and press the ball bearing 6902 ( $\varnothing 15/28 \times 7\text{mm}$ ) into place by tapping it with the synthetic head hammer.

Lightly grease the ball bearing using a commercially available multi-purpose grease and a paintbrush.  
Push the complete adapter over the axle and press it into place.

### CAUTION:

When you turn the axle, you should not be able to feel any irregular friction. Push and pull the axle in order to make sure that there is no lateral play in the axle.

# MANUAL STAR RATCHET HUBS

## RW assembling the freewheel

Use DT Swiss special grease to lubricate the cleaned ring nut inside the hub shell.

Push the spacer over the axle until it butts against the ball bearing. Insert the spring (large diameter on ball bearing ring). The spring should lay directly against the ball bearing collar.

Clean the right hand of the rotor with a clean cloth. Clean the internal toothing on the left hand with a tooth brush.

Place the spring into the rotor with the large diameter end laying against the shim ring.

Carefully clean the star ratchets with a dry cloth. Inspect both star ratchets for damage. If any damage is visible, the parts must be replaced using original DT Swiss components. LIGHTLY grease both star ratchets.

### IMPORTANT: !

Before positioning the second spring into the rotor housing, check that the rotor ball bearings spin freely without binding. If any binding or scratching is detected, replace the rotor with a new or reconditioned one.

# MANUAL STAR RATCHET HUBS

## RW assembling the freewheel

**CAUTION:**

Never use normal grease in the freewheel mechanism, because this will impair the function of the star ratchet teeth. Only use DT Swiss recommended special grease for this procedure !

Place both greased star ratchets with the teeth towards one another over the axle.

Push the rotor over the axle.

**Caution: Ensure the rotor is not tilted !**

Thoroughly clean the right hand adapter and lubricate it using commercially available grease. Place the adapter over the right hand end of the axle and press into place manually.

**Caution: Ensure the adapter is not tilted !  
Ensure that the adapter audibly clicks into place!**

After installing the hub, check its function by giving it a sharp, quick spin.

**CAUTION:**

If the ratchets do not catch, there could be too much grease inside the rotor, or the wrong type of grease was used. In this case, remove some of the grease or replace it using grease of the correct type.

# MANUAL 2 PAWL HUBS

## Instructions

Please read the entire manual before using the hubs or before carrying out any kind of maintenance work. In this manual, the hubs are shown installed in a complete wheel. Maintenance work should be carried out on complete wheels where possible, as some steps can otherwise not be carried out correctly when using these tools.

This manual is intended for retailers with the appropriate skills and knowledge. It details the principle design features of DT Swiss hubs and also provides instructions as to maintenance and repair work. Please take special care to use only original DT Swiss special tools in order to undertake the work detailed in this manual. In the event of improper servicing of the hubs, DT Swiss LTD. has the right to refuse any warranty.

Due to continual improvements that are made to DT Swiss products, it is possible that the hub(s) you have received differ slightly from the model(s) described in this manual. For the newest version of the service manual or for miscellaneous questions, please consult the official DT Swiss, representative for the country in which you reside or consult our Internet homepage <http://www.dtswiss.com>.

Please give special attention to the following notice which is listed under the title below:

## CAUTION:

In the case of non-compliance with these instructions, the function of the hub will be impaired, which may lead to injuries with serious consequences, and the loss of the product guarantee.

## Maintenance of the hubs

Maintenance of the rear and front hubs wheel must be carried out at least once a year. When used under extreme conditions (heavy rain, mud, transport in the rain etc.) the free-wheel should be serviced more often.

Regular maintenance of the hub helps to ensure a longer life and optimum running performance for years.

In the case of exposure to water under excessive pressure (e.g. high-pressure cleaners), water may penetrate into the hub. This may damage the hub. Do not use any solvents or detergents.

## Important

- Before every use, check the function of your rear wheel hub. Make sure that the free-wheel and engagement connection function impeccably. Should there be any malfunction, the rear wheel hub must not be used. In such a case, the problem must be repaired before use. If you are not in a position to repair the hub, contact your dealer, service center or consult the DT Swiss website [www.dtswiss.com](http://www.dtswiss.com).
- We strongly recommend that you have your wheels built by an experienced specialist. Proper wheel building is the best way to ensure that your wheels will last and be problem-free.
- New hubs have a higher rolling resistance than used hubs, because the grease in the free wheel has not yet been evenly distributed and the seals have not yet been bedded in.
- Radial lacing on DT Swiss hubs is not recommended as it may lead to impermissible deformations on the hub flange. Flange breakage is not covered under the warranty in this case.
- In the case of the Disc Brake version, the original screws must be used for the brake disc.
- Disregarding these instructions will limit the function of the freewheel and can lead to injury or other severe consequences and the loss of the product warranty.

 DT SWISS

## RW Disassembling

Clamp the axle holder into a vise.

Clamp the left side of the wheel into the axle holder. Use 17mm wrench to loosen the adapter.

Unscrew the adapter and remove it from the axle..

Remove the rotor from the axle

Use a screwdriver to remove the spring and pawls.

### IMPORTANT:

If the spring is removed, it has to be replaced by a new one.

# MANUAL 2 PAWL HUBS

DT SWISS

## RW Disassembling

Pull the needle cage and cylindrical rollers out of the hub shell.

Use the synthetic head hammer to tap out the axle of the housing.

Pull out the axle from the housing manually. Fix the axle holder into the vise and clamp the axle into it. Using the 17mm wrench, loosen the adapter and remove it from the axle.

Remove the ball bearing from the axle.

Turn the wheel around. Reinsert the axle into the housing and use a synthetic hammer to tap the ball bearing out. Push the ball bearing from the axle.

**CAUTION:**

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must be replaced by original DT Swiss components.

# MANUAL 2 PAWL HUBS

## RW disassembling the pawl carrier

The disassembling of the pawl carrier, the screw fitting for pawl carrier and the bearing shell should only be done if one of these parts is defective or has to be replaced. Otherwise skip to page 17.

Clamp the long installation tool into a vise

Push the wheel into the long installation tool. Plug the axle for truing into the bearing shell

Locate the wrench for bearing shell according. Unscrew with wrench 27mm the bearing shell.

**CAUTION: Left hand thread!**  
Remove tool, bearing shell and axle.

Clamp the allen key 12mm tool into a vise.

Unscrew with the allen key in the hub shell.

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must be replaced by original DT Swiss components.

# MANUAL 2 PAWL HUBS

 **syncros**

 **DT SWISS**

## RW assembling the pawl carrier

The disassembling of the pawl carrier, the screw fitting for pawl carrier and the bearing shell should only be done if one of these parts is defective or has to be replaced. Otherwise skip to page 17.

Plug screw fitting for pawl carrier on the allen key 12mm. Push the pawl carrier with star toothed into the hub shell, tighten screw fitting on the opposite side with 50Nm.

Tighten bearing shell manually.  
**CAUTION: Left hand thread!**  
Plug the axle for truing into the bearing shell and locate the wrench for bearing shell according.

Tighten with wrench 27mm the bearing shell with 20Nm.

# MANUAL 2 PAWL HUBS

## RW assembling the ball bearing

Clamp the long installation tool into the vise. Push the axle, longer end first, into the installation tool. The short end (33mm) should be on top.

Place the wheel over the axle and fit the new 6900 ball bearing ( $\varnothing 10/22 \times 6$ mm) onto the bearing shell.

Use the short installation tool and the synthetic head hammer to press the 6900 ball bearing ( $\varnothing 10/22 \times 6$ mm) into place.

Remove the wheel from the installation tool. Pull out the axle from the housing and place the wheel again over the installation tool.

Push the short installation tool over the ball bearing, use the synthetic head hammer and press again the 6900 ball bearing ( $\varnothing 10/22 \times 6$ mm) into place.

### CAUTION:

This is an important step, which ensures that the ball bearing is correctly pressed in.

# MANUAL 2 PAWL HUBS

 **syncros**

 **DT SWISS**

## RW assembling the ball bearing

Turn the wheel around.  
Push the axle, short end (33mm) first,  
into the hub shell.

Slide the 6000 ball bearing  
( $\varnothing 10/26 \times 8$ mm), black side up, over  
the axle.

Use the short installation tool and the synthetic head hammer to press the 6000 ball bearing ( $\varnothing 10/26 \times 8$ mm) into place.

Turn the wheel around. Lightly grease the hub  
shell using a commercially available multi-  
purpose grease.

Assemble synthetic needle cage with opening  
up (without cylindrical rollers) over the bearing  
shell into the hub shell. Then install the cylindri-  
cal rollers into the synthetic needle cage.

# MANUAL 2 PAWL HUBS

## RW assembling the spring and pawls

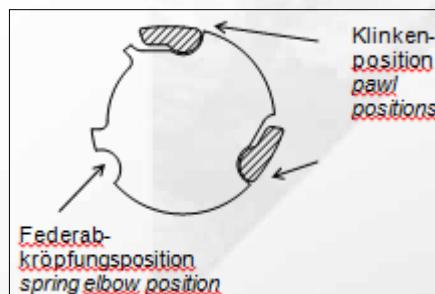

Place the spring over the axle as shown in the illustration 1.

The spring must be installed into the pawl carrier as shown in illustration 2.

Use a screwdriver to push both pawls beneath the spring.

Grease the needle cage and the pawls using a commercially available multi-purpose grease.

Grease the 6900 ball bearing using a commercially available multi-purpose grease.

# MANUAL 2 PAWL HUBS

 syncros

 DT SWISS

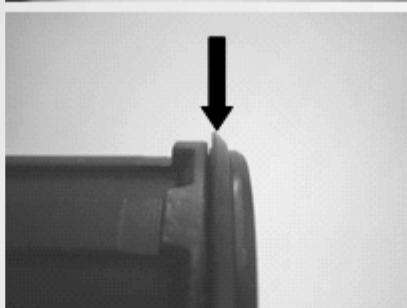

## RW assembling the rotor

Remove the rotor seal from the housing, clean it thoroughly and grease it using a commercially available multi-purpose grease.

Clean the rotor teeth using a tooth-brush, then thoroughly grease the inner toothing and the ball bearing using a commercially available multi-purpose grease.

The seal should be installed in the groove so that the lip is towards the outside.  
Replace faulty seals !

Push the complete rotor onto the axle

**CAUTION:** 

Do not use excessive force to push the rotor over the pawls, in order to avoid damage to the spring.

# MANUAL 2 PAWL HUBS

 syncros

 DT SWISS

## RW assembling the rotor

Lightly grease the ball bearing using a commercially available multi-purpose grease and a paintbrush.

Clean the adapter thoroughly and grease using a commercially available multi-purpose grease. Push the complete adapter over the axle.

Push the knurled steel disc over the axle and tighten it by hand.

Turn the wheel around and clamp the adapter into the into a vise. Lightly grease the ball bearing using a commercially available multi-purpose grease and a paintbrush.

Push the complete adapter over the axle.

# MANUAL 2 PAWL HUBS

## RW assembling the rotor

Push the knurled steel disc over the axle and tighten it by hand

Tighten the adapter with the wrench, using approx. 17Nm torque (or 12,5 lbf).

### CAUTION:

If the pawls do not click into place, the spring may not have been correctly installed, or there could be too much grease in the freewheel.

# MANUAL 2 PAWL HUBS

 **syncros**

 **DT SWISS**

## FW disassembling

Tap the end of the axle with the synthetic head hammer until the axle butts against the adapter. Remove the adapter manually.

Tap the axle out of the hub using a synthetic head hammer.

Slide the adapter and ball bearing off the axle.

Reinsert the axle into the hub and tap the second ball bearing out.

## CAUTION:

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must be replaced using original DT Swiss components.

# MANUAL 2 PAWL HUBS

## FW disassembling

Push the new ball bearing with the axle into the correct tool

Laufrad auf die Achse schieben. Passende Montagebuchse in Gegenseite mit der Achse zentrieren und das erste Kugellager einpressen.

Slide the wheel onto the axle. Center the fitting installation tool on the opposite side of the axle and press the first ball bearing into place.

Remove the installation tool from the housing. Pull out the axle approx. 10mm (half an inch) of the housing. Push the second ball bearing into the housing.

Place the second installation tool over the ball bearing and tap the second ball bearing into place.

Grease both ball bearings using a commercially available multi-purpose grease and a paintbrush.  
Position the both adapters onto the end of the axle and press it into place.

When you turn the axle, you should not be able to feel any irregular friction. Push and pull the axle in order to ensure that there is no play in the axle.

### CAUTION:

All components should be cleaned and inspected. If any cracks or other damage are visible, the parts must be replaced using original DT Swiss components.

# 46 SYNCROS BIKE COMPONENTS

SCOTT SUMMER 2013  
 TECH WORKSHOP

# SYNCROS BIKE COMPONENTS

As explained in the Tech Meeting the regular way for spare parts supply and warranty support on Syncros Wheel parts ist he national DT Swiss Distributor.

In case you do not have a national DT Swiss Distributor we can help with following parts.

Please contact for individual order of those parts the Scott EU-QM Team.

**Please kindly note that those parts are intended for service and support but not regular sales.**

**For all other parts of the Syncros product range please refer to the regular dealer catalog or the webshop.**

WORKSHOP- cleanliness and order in the workplace, is the prerequisite for - QUALITY

Scott is a brand which develops and offers products with high end and lightweight standards. This starts with the development and production and ends with the service.

To offer a good and professional service for our customers it is necessary to have a clean and well equipped workshop. It's also necessary because you are either a branch or an importer, and YOU are reflecting the quality and standards of the SCOTT product in the service you provide.

Below you will find a list with some important special tools we recommend to have in your workshop to check and repair bikes in a professional and uncomplicated way.

In case you want to renovate and upgrade your workshop with WÜRTH tools please contact the QM department. We are able to help you because we have some special terms with WÜRTH
