

SCOTT PATRON eRIDE

—

TECH AND FACTS REPORT

eRIDE

APRESENTAMOS A NOVISSIMA PATRON

THE SCOTT PATRON ERIDE EMBODIES THE PERFECT BALANCE OF POWER, PRECISION, AND INNOVATION; WHERE CUTTING- EDGE TECHNOLOGY MEETS UNPARALLELED DESIGN.

KEY TAKEAWAYS

SLEEK DESIGN

SCOTT'S INTEGRATED APPROACH SEAMLESSLY INCORPORATES THE SHOCK AND BATTERY INTO THE FRAME WHILE ENSURING EASY ACCESS TO THE COMPONENTS FOR EXCELLENT SERVICEABILITY

SMOOTH SUSPENSION

THE WELL-BALANCED SUSPENSION LAYOUT, COMBINED WITH THE TRACLOC SYSTEM, ENSURES EXCELLENT HANDLING ACROSS ALL TERRAIN TYPES

BALANCED GEOMETRY

THE THOUGHTFULLY DESIGNED GEOMETRY ENSURES THE BIKE PERFORMS EXCEPTIONALLY WELL BOTH UPHILL AND DOWNHILL, OFFERING STABLE YET RESPONSIVE HANDLING.

POWERFUL MOTOR

WITH 85NM OF TORQUE AND AN 800WH BATTERY, THE BOSCH PERFORMANCE LINE CX MOTOR—THE NEWEST INNOVATION ON THE MARKET FROM BOSCH—PROVIDES A SMOOTH, POWERFUL ASSISTANCE THAT FEELS INCREDIBLY NATURAL AND EFFORTLESS.

SCOTT'S LATEST FULL-POWER E-MTB, THE PATRON, IS BUILT FOR THE TOUGHEST RIDES, OFFERING IMPRESSIVE RANGE AND POWER. AVAILABLE IN TWO VERSIONS (PATRON ST AND PATRON 900) IT'S READY FOR ANYTHING, FROM SMOOTH TRAILS TO THE MOST CHALLENGING TERRAIN.

Patron ST Series: The “Super Trail” (ST) series is purpose-built for aggressive, technical riding on rough and demanding trails, with reinforced components designed to withstand bigger impacts and intense downhill action. With 170mm of front travel and a piggyback shock in the rear, the ST platform excels when the trail points downhill,

Patron 900 Series: The Patron 900 series is crafted for all-around fun and versatility, making it the ideal choice for trail enthusiasts who want a bike that can handle a variety of conditions. With 150mm of well-balanced front and rear travel and versatile, trail-optimized

components, the Patron 900 is perfect for riders looking for a bike that performs reliably on both climbs and descents, without compromising comfort or control. This series is the go-to option for those who want a dependable, all-mountain solution that adapts to every trail situation.

CONSTRUÇÃO DO QUADRO

The Patron's frame is available in three options: a full carbon version, a full alloy version, and a hybrid version featuring a carbon main frame combined with an alloy rear triangle. All frame configurations feature the same modern geometry, innovative integration, and a sleek design, ensuring a consistent riding experience across all models. The 900 and ST models share the same versatile 150mm travel frame, making them ideal for various riding conditions. Compared to the previous model the shock has been repositioned to a lower, more centralized location

to improve weight distribution and overall performance. Redesigned covers with mechanical and magnetic fastenings provide easy access to integrated components.

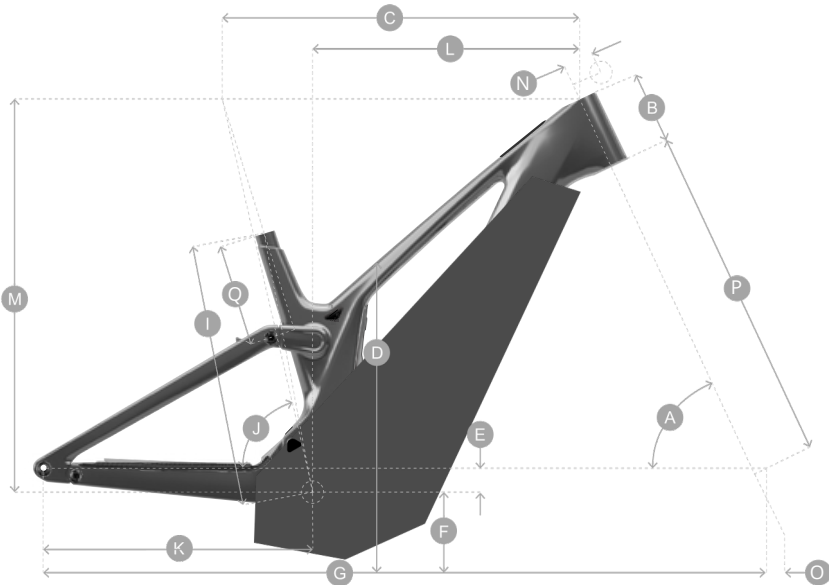

With its 55mm chainline, the Patron accommodates up to 2.6" tires, giving you the option to run wide tires for maximum grip and comfort or to leave extra clearance for optimal performance in muddy conditions.

GEOMETRIA DO QUADRO

Balance is key and the Patron's geometry offers the perfect blend of Both the Patron and Patron ST feature 150mm of rear travel, with the 900 fun, control, efficiency, and comfort. It's designed to give you matching that in the front. The ST, however, is equipped with a 170mm confidence and agility on downhills while enabling powerful riding and fork, offering extra travel for added control and slackening the geometry efficient climbing with motor assistance. for rougher trails.

TECNOLOGIA DE SUSPENSÃO INTEGRADA

The new Patron integrates our patented Suspension Technology, which enhances performance by lowering the bike's center of gravity. This design improvement results in superior handling and a more stable, confidence-inspiring ride. Furthermore, the shock is well-protected from the elements, preserving its performance. As a bonus, these thoughtful design elements contribute to a visually striking and impressive bike.

CAPA DO MOTOR

The motocross-inspired cover is the thickest component ever developed and produced by SCOTT, providing exceptional protection

for the motor and ensuring the bike can handle any trail conditions. Its easy removal allows convenient access to the Bosch drive unit.

CABLE MANAGEMENT

For both hydraulic and mechanical housings, we've designed the most natural routing for them to enter and exit the frame. The goal is to reduce friction by avoiding unnecessary bends and to ensure optimal

functionality. This natural path runs from the rear wheel through the chainstay, then up the seat tube and along the top tube to the head tube.

SISTEMA DE SUSPENSÃO TRACLOC

The Patron 900 features our TracLoc suspension system, a proprietary SCOTT design that connects the shock to a handlebar remote, allowing you to switch between three modes for versatile performance. When transitioning from Descend mode to Traction Control, two key changes occur: the air volume in the shock is reduced, and compression damping is adjusted.

These adjustments alter the bike's dynamic geometry: you sit higher in the shock's travel, which increases ground clearance and positions

you more effectively for power transfer on snappy singletrack and technical climbs. As a result, the bike becomes more agile, nimble, and efficient without sacrificing traction or sensitivity.

Additionally, the shock includes a lockout mode, which is the firmest setting and ideal for long climbs on smoother surfaces as you approach the trailhead. This mode also features a blow-off mechanism to protect the suspension from damage during unexpected impacts.

INDICADOR SAG

Setting sag and checking travel usage with the Patron is as easy as on our other integrated shock bikes. An external indicator on the linkage allows the rider to effortlessly adjust the sag and monitor how much travel is being used.

The Patron ST is designed for riders who go all-in on downhill performance, requiring a shock that meets specific demands. While this shock also features three modes that can be controlled with a remote, we've made some unique adjustments compared to the Patron 900 shocks.

Building on positive feedback from our ramp control options in previous Genius, Ransom and Voltage eRide models, we introduced the Float-X shock, allowing for on-the-fly adjustments. In Descend mode, both air chambers are open, providing access to 150mm of specifically tuned suspension travel. When you switch to Ramp Control mode, one chamber closes, increasing progression within the shock. This feature acts like adding a volume spacer mid-ride, making it perfect for tackling technical singletrack and fast bike park sections.

Additionally, Climb mode closes off compression damping and modifies the bike's dynamic geometry for long climbs, helping you conserve energy for the descent. The Float-X also includes a Low-Speed compression adjust dial for further tuning. In summary, the Patron ST is fully equipped to handle the most challenging trails, delivering exceptional performance and responsiveness.

ACESSO AO AMORTECEDOR E À BATERIA

Both the shock and battery are independently accessible, allowing for quicker maintenance with fewer disassembly steps. Additionally, the bike frame is equipped with magnet-guided, tool-free covers that are secured with a locking mechanism for reliable performance and allow easy access to key components.

GAME-CHANGING POWER AND PRECISION

The Patron is designed to dominate the trails, striking the perfect balance between agility and control. At its core is the new Bosch Performance Line CX drive unit, engineered for riders who demand

uncompromised power. With a maximum output of 600W and a continuous power output of 250W, this motor effortlessly tackles steep climbs and navigates technical terrain with ease.

CAPACIDADE MONUMENTAL

The Patron features the new integrated 800Wh Bosch battery, providing ample range for long, demanding mountain rides. This battery seamlessly fits into the bike's silhouette, while the downtube door allows for easy removal and effortless charging. For riders seeking

even more range, the Bosch PowerMore Range Extender adds an additional 250Wh, offering a total of 1050Wh and ensuring longer days on the trails without range anxiety.

The crank-based design lowers the center of gravity, resulting in stable and responsive handling, ensuring that riders feel connected to the trail while enjoying the boost.

CONTROLO SEM ESFORÇO

To ensure you're always in control, the Patron features Bosch displays and remotes that simplify mode changes and keep track of your ride without distracting from the trail. The minimalist design allows for seamless integration with the bike.

BOSCH MINI REMOTE

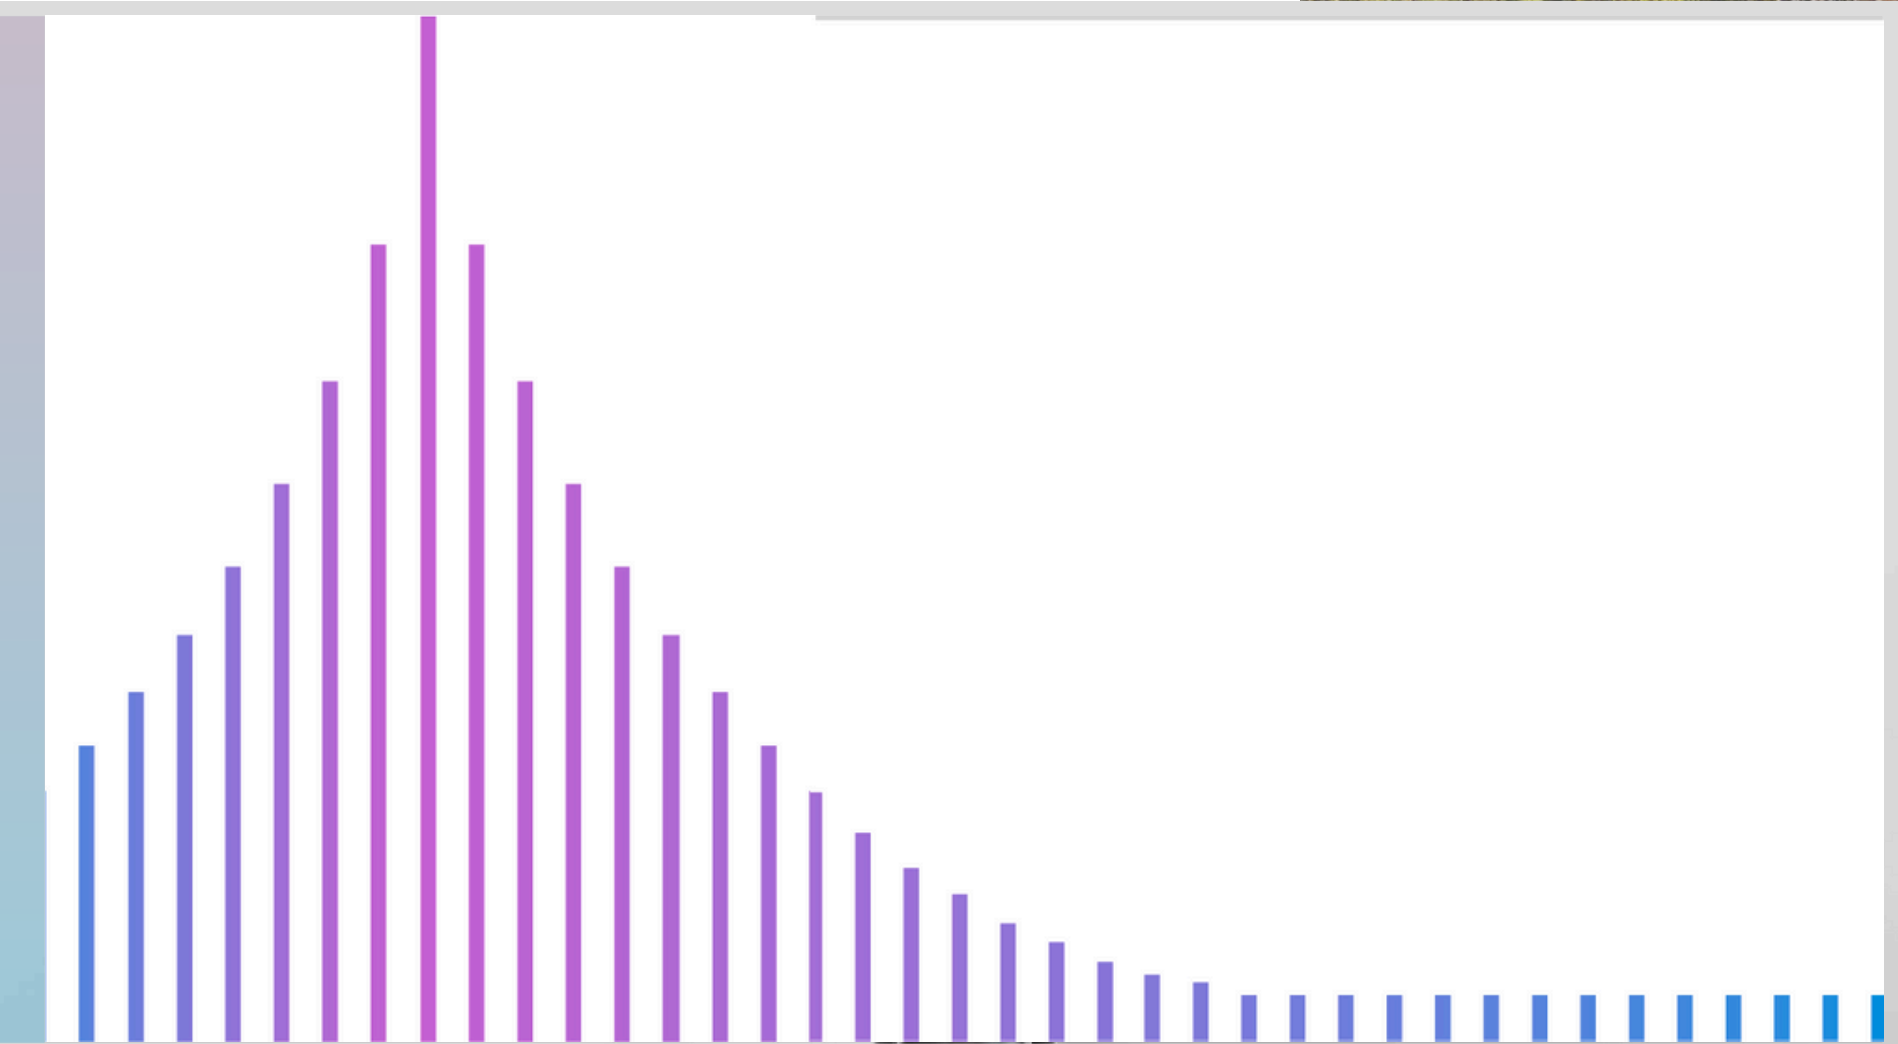

CHANGE MODES ON THE FLY WITHOUT TAKING YOUR EYES OFF THE TRAIL.

KIOX 300

PROVIDES REAL-TIME STATS, INCLUDING SPEED, DISTANCE, AND NAVIGATION, AVAILABLE ON THE PATRON 900 AND 910 MODELS.

INTUVIA 100

DISPLAYS ESSENTIAL INFORMATION SUCH AS SPEED, DISTANCE, RIDING MODE, AND BATTERY LEVEL, FEATURED ON THE PATRON 920.

CONTROLO OTIMIZADO PARA MAIOR VELOCIDADE

Selected Patron models come equipped with Bosch ABS Pro, a braking system designed to improve traction on challenging surfaces. This advanced system automatically adjusts brake pressure based on current conditions, allowing you to maintain focus on the trail ahead. If you find yourself braking late while descending, you can rely on the ABS to help you maintain control and optimize your speed, allowing you to brake later on purpose with confidence. Bosch ABS Pro is available on the Patron ST 900 Tuned and Patron 900 models.

KIT DE ACABAMENTO SYNCROS

The Patron features a Hixon Cockpit from Syncros in either one-piece carbon integrated cockpit, or a more traditional two-piece bar and stem. Both of these have two options for rise depending on frame size (15mm and 25mm) and two stem lengths. Multiple options exist for computer mounts, lights, etc. Swapping head angle is easy. Just take off your cockpit, remove headset cups, rotate them each 180 degrees,

and reassemble. No need to cut any cables or bleed any brakes. Cable integration is not exclusive to the one-piece cockpits though, with the possibility to mount on the stem cap, but also out the front of the bar using two threaded inserts. All cables flow neatly under the bar and into the headset leading to a clean, clutter free cockpit.
